

PROFESSIONAL SUMMARY:

- Around **6+ years** of extensive experience in Analysis, Design, Development, Maintenance, and Deployment of enterprise **web applications** with full-stack development based on JAVA/J2EE Technologies.
- Participated in the entire **Software Development Life Cycle (SDLC)**, including Software Applications- **Requirement Analysis, Design, Development, Testing, Implementation, Documentation, and Support.**
- Experienced in software development methodologies in **Agile SCRUM and TDD (Test Driven Development).**
- Developed UML Diagrams for Object-Oriented Design: **Use Cases, Sequence Diagrams, and Class Diagrams** using **Rational Rose, Visual Paradigm, and Visio.**
- Hands-on experience in solving software design issues through the implementation of design patterns including **Singleton Pattern, Business Delegator Pattern, Controller Pattern, MVC Pattern, Factory Pattern, Abstract Factory Pattern, DAO Pattern, and Template Pattern.**
- Experienced using **JSP, JavaScript, HTML 5, Bootstrap, React JS, Angular JS, Node JS, XML, Ajax and CSS** in innovative and effective front-end development.
- Extensive experience in using Core Java concepts **like Object Oriented Programming, Exception Handling, Multi-Threading, Collections, and IO.**
- Excellent work experience using various Spring modules, such as **Spring IOC, Spring MVC, Spring AOP, Spring JDBC, Spring ORM, Spring Boot, Spring Web Flow, Spring Cloud** in Web applications
- Strong technical knowledge of the persistent service, **Hibernate, and JPA** for object mapping with the database. Configured XML files for mapping and hooking it with other frameworks like **Spring and Struts.**
- Expert programming skills at **Struts Framework, JSF, Custom Tag Libraries, Spring tag Libraries, and JSTL.**
- Good **Web Services** exposure using **Apache CXF and Apache Axis** for **SOAP** Message exposure and consumption.
- Knowledge in developing **RESTful** web services using frameworks **Spring Boot, Jersey, and Apache CXF.**
- Experience in writing SQL queries in Relational Database Management Systems such as **Oracle, MS SQL, MySQL, and DB2** in PL / SQL, Triggers, and Stored Procedures. Knowledge and use of experience in **Mongo DB, Apache Cassandra-NoSQL** databases
- Have extensive experience in creating and deploying **Web / Application Server** applications such as **WebLogic, WebSphere (WAS), JBoss, and Tomcat.**
- Experienced in using **Jenkins** in Continuous Integration server to configure with **GitHub** and **Maven.**
- Experience in working with Bug tracking and Issue Tracking using **JIRA** and HP ALM Quality Center.
- Experience in Building, Deploying, and Integrating with **Ant** and **Maven.**
- Experience in development of logging standards and mechanisms based on **Log4J.**
- Worked on version control systems, such as **SVN, Git, GitLab, and Bitbucket.**

- Experience in writing **JUnit** test cases.
- Experience in using Messaging Services like **JMS** and **MQ**.
- Experience working with **AWS** (Amazon Web Services), working with **EC2, Simple DB, RDS, Elastic Load Balancing, SQS, SNS, AWS Identity and access management, AWS Cloud Watch, Elastic Beanstalk and Cloud Front, Redshift**.
- Excellent in deploying applications as **EC2 instances** in AWS and creating snapshots for the data stored in **AWS S3**.
- Applied Amazon Web Services (AWS) EC2 to deploy **monolith-** and **micro-service containers** from **Docker**.
- Strong work ethics with a desire for success and substantial contribution to the organization.
- Excellent inter-personal and communication skills and the ability to adapt and quickly learn new technology skills.

TECHNICAL SKILLS:

Programming Languages	Java, C, C++, C#, Python
J2EE Technologies	JDBC, Servlets, JSP, JSTL, JNDI, RMI, JMS, EJB, XML
UI Web Technologies:	HTML5, CSS3, Bootstrap, AJAX, Node.js, Express, ReactJS, Angular, Java Script, jQuery, JSON UI Concept Modeling/Wire framing.
Databases	MySQL, Mongo DB, Oracle 11g, Back4App, SQL Server, Firebase, Cassandra
Tools	ANT, Maven, TOAD, MySQL Workbench, Oracle SQL Developer, SOAP UI, Advanced Rest Client, Visio, Squirrel SQL Client, Putty, WinScp, Win Merge, Git, Bitbucket
IDE	NetBeans, Eclipse, IntelliJ, Android Studio, Visual Studio Code
Application Servers	Apache Tomcat, WebSphere, JBoss, Web Logic
Web Services	REST, SOAP
Frameworks	Spring MVC, Spring Boot, Spring Cloud, RxJava, Struts, Hibernate, JPA, AngularJS, , Struts, JSF, Log4j, ReactJS, Vue Js, node
Cloud	Amazon EC2, IAM, Amazon S3, Amazon Elastic Load Balancing, Dynamo DB, Cloud Watch, Cloud Front
Build Tools	Maven, Gradle
Defect Tracking Tools	JIRA, ServiceNow, ALM
Testing Tools	Cucumber, JUnit 4, Easy Mock, Spring Test
Scripting Languages	TypeScript, ES6
Other	Jenkins, Docker, Oracle Coherence

EDUCATION:

- Masters in ComputerScience – University of Houston ,TX

PROFESSIONAL EXPERIENCE:

MD Anderson Cancer Centre, Houston, TX

December 2019 – Till Date

Full Stack Java Developer

- Involved in the design, development, testing, integration, and deployment phases of the Software Development Life Cycle.
- Implemented Micro Services architecture to divide the application into modules by using Spring Boot and Spring Integration.
- Worked on Microsoft SQL Server and Sybase to query the data.
- Developed a model layer of the application using Spring modules like IOC, AOP, ORM, Boot, Integration, and Batch.
- Worked with Hibernate and JPA frameworks to implement the persistence layer over Sybase and SQL Server.
- AWS EC2 instances have been configured in NodeJS development and QA environments.
- Designed and implemented an HTML5, CSS3, JavaScript, and Angular JS user interface.
- Developed Hibernate mapping files using different mapping strategies such as table per class hierarchy and also used Hibernate Persistence Strategy to interact with the database
- Developed cross-browser/platform HTML5, CSS, and JavaScript to match design specs for complex page layouts while adhering to code standards.
- Enhanced user experience by designing new web features using MVC Frameworks such as Express JS and Node JS.
- Worked on the modernization of a legacy and outsourced UI. The technologies used were Angular JS 2, CSS, Node JS, Express JS, and AWS (Amazon Web Services).
- Implemented various features of Hibernate framework like HQL Named Queries, Criteria, projections etc.
- Implemented mapping between entity classes and database tables using Hibernate and JPA.
- Wrote complex SQL queries including joins, indexes, views, triggers and nested queries.
- Implemented Spring Restful template to consume restful services from third party tool Droit.
- Implementing reactive programming using RxJava for asynchronous composition and manipulation of data and events using Observers and Observables in the application.
- Worked with Spring Batch Processing & Job scheduling tools such as AutoSys.
- Involved in writing Spring Configuration XML files that contains declarations and other dependent objects declaration.
- Developed Message Driven Beans for receiving and processing data from MQ Series using JMS.
- Used the JMS API for asynchronous communication by placing messages in the Message queue.
- Implemented Oracle Coherence as caching mechanism in the service layer.
- Used Oracle Coherence in Java Collection API to access and modify data, and the JavaBean event model to receive data change notifications.
- Deployed web services are tested using Advanced REST Client.
- Developed and maintained UNIX shell scripts for data-driven automatic processing.
- Used Apache Tomcat in development environment and JBoss in production environment.
- Used log4J for logging and debugging of the application.
- Maintained Git repositories. Version control and build automation integrating Git into Jenkins.
- Worked with development tools like Squirrel SQL Client, Putty, WinScp and Win Merge.
- Used JIRA and HP ALM for bug tracking, issue tracking and project management.
- Involved in writing JUNIT test cases and day to day builds and deployments using Maven and Jenkins.
- Involved in Day to Day Scrum meetings to update and discuss issues.

Environment: Java 1.8, J2EE, Spring framework 4.0, Spring IOC, Spring AOP, Spring ORM, Spring Boot, Spring Integration, JPA, Hibernate 4.3, Dozer, Oracle Coherence, RESTful, Droit, WPF, Angular JS 2.X, Bootstrap, HTML5, CSS3, XML, JSON, JavaScript, AJAX, JMS, MQ, Microsoft SQL Server, Sybase, SQL/PLSQL, Squirrel SQL Client, Shell Scripting, Putty, WinScp, Win Merge, Log4j, JUnit, Eclipse, IntelliJ, Maven, Jenkins, JBoss, Apache Tomcat, Git(Bash/Shell), AutoSys, AWS EC2, S3, AWS Lambda, JIRA.

Nabors Industries, Houston, TX

September 2018 – November 2019

Full Stack Java Developer

- Responsible for the full software development life cycle (SDLC) using Agile Methodology, participated in Daily stand-up meetings with Scrum Master, co-developers communicated with testers and resolved tickets.
- Involved in the development of the model layer of the application using the Spring framework.
- Used the Hibernate framework to implement the persistence layer of the application.
- Worked with Oracle and SQL Server database tables.
- Implemented the persistence layer using various features of Hibernate framework like HQL queries, Criteria, projections, etc.
- Provided mapping between relational database tables and java objects using Hibernate.
- Worked on the user interface using React JS, JavaScript, Bootstrap, CSS3, HTML5, and Ajax.
- Developed T-SQL views, complex stored procedures, effective triggers, and useful functions to facilitate efficient data manipulation and consistent data storage.
- Wrote simple and complex SQL queries using DML, DDL, Table joins, Grouping functions, Analytical functions, Partition by clause towards Reports, and Application development.
- Worked with JavaScript, JSF, React JS, and JQuery for the front end of the application.
- Used Spring MVC with Spring Restful Template to Produce and consume Restful Web Services.
- Used Spring framework including IOC, transaction management, Spring Batch, Spring Boot, Spring MVC, Spring Security, and Spring AOP.
- Worked with MDB's to listen to JMS and process messages.
- Developed JMS components to send messages from one application to another application internally.
- Built Micro Services using Spring boot with continuous deployment and continuous integration using Docker and Jenkins.
- Developed Java classes that used JMS to communicate with the Queue managers.
- Implemented the validation, error handling, and caching framework with Oracle Coherence Cache.
- Created and Implemented Micro Services using Spring Boot, REST, and JSON.
- Designed and developed Rewards API using Spring Boot.
- Developed AWS Elastic Search Restful web services using JAX-RS and Apache CXF.
- Experience in the design of high availability, scalable, fault-tolerant AWS Cloud platform.
- Implemented AWS solutions using EC2, S3, RDS, EBS, Elastic Load Balancer, Autoscaling groups, optimized volumes, and EC2 instances.
- Deployed web services are tested using Advanced REST Client.
- Developed and maintained UNIX shell scripts for data-driven automatic processing.
- Used Apache Tomcat in the development environment and WebSphere in the production environment.
- Used log4J for logging and debugging of the application.
- Involved in change management and coordinated with the testing team.
- Involved in unit testing using JUnit and performing Integration testing and system testing.
- Used Maven to build and deploy the application on the server.

Environment: Java 1.8, J2EE, SQL, PL/SQL, Struts, Spring 4.0, JSF, Hibernate 4.2, WebSphere 8.5, Apache Tomcat, React JS, Angular JS 2.X, Bootstrap, HTML5, CSS3, XML, JSTL, JMS, MDB, JSON, JavaScript, AJAX, RESTful, SOAP, SOAP UI, Oracle 11g, SQL Server, Shell Scripts, Log4j, Junit 4.0, Oracle Coherence, Eclipse, Maven, AWS EC2, S3, AWS Lambda, UNIX.

JPMorgan Chase, Dallas, TX

June 2016 – August 2018

Sr. Java Developer

- Involved in the requirements analysis, the design, development, testing, integration and deployment.
- Involved in converting the requirements into application design layers.
- Used Spring MVC architecture, Spring framework in the business layer, and hibernate in the persistence layer.
- Implemented the back-end services using SpringBoot.
- Involved in the development of messaging framework for asynchronous process.
- Used Hibernate ORM framework as persistence engine, configured hibernate.xml file and Involved in Mapping, Coding and Fine tuning of hibernate Queries.
- Worked with EJB in the implementation of the persistence layer in the application.
- Worked with creating Web Services to access other applications like Treaty and Accounting.
- Mainly responsible for developing RESTful API using the Spring Boot framework. Developed different controllers that return the response both in JSON and XML based on the request type.
- Worked with SVN, Toad, Maven tools.
- Involved in SOAP and RESTful web-services implementation.
- Worked with Spring security for authentication and acc Java Developeress control.
- Worked with Angular JS, JavaScript, Ajax and JQuery for the front end of the application.
- Worked with the Angular JS framework for building web applications that is highly efficient using RESTful web services.
- Wrote complex SQL statements, including joins, indexes, and nested queries.
- Developed SQL scripts to Insert, Update, Delete and Merge data in the database tables along with SQL joins.
- Implemented the Coherence Cache, which can be used for Spring Annotations.
- Configured and build Asynchronous communication with JMS services with MQ Series.
- Developed application using JMS to send and receive Point-to-Point JMS Queue messages.
- Worked with log4j for application logging.
- Used AWS framework for creating background and multistep workflows.
- Involved in retro-fit activities during the change of requirements and coordinated with the testing team.
- Developed and executed Unit Test cases using the JUnit framework by supporting TDD.
- Extensively used Core Java Collections, Generics, Exception Handling, and Design Patterns for functionality, such as Cash-Flow summary and source data information.
- Wrote PL/SQL Queries, stored procedures, triggers, and prepared statements.
- Responsible for JSP client-side validations and server-side validations.
- Provided production support and involved in resolving the production issues

Environment: Core Java, J2EE, HTML5, JSP, JSTL, CSS3, JavaScript, AWS, SQL, PL/SQL, Jenkins, REST, SOAP, Spring 3.0, Hibernate, EJB, JIRA, Maven, SVN, Angular JS, JUnit, JMS, TOAD, Oracle Coherence, Oracle SQL Developer, Linux, Shell Scripts, Eclipse, Web Sphere, Oracle 11g.

Java Developer

- Involved in developing front screen using jQuery Mobile.
- Designed and developed back-end function with several Java design patterns such as Data Access Object, Singleton, MVC, and Factory patterns.
- Used Spring framework as a business logic tier to perform IOC, AOP, and integration with Spring MVC to define Controller, action mappings, services, DAO's, and DAO's implementation to perform CRUD operations interactive with persisting objects.
- Performed ORM with Hibernate to design and create the mapping classes, sessions, transactions, HQL, and Criteria to fetch and persist data.
- Used SOAP, WSDL, JAX-WS to produce web services, generate stubs, and to consume the existing web services.
- Used AJAX to implement asynchronous communication with the server-side.
- Involved in developing the Controller class to communicate front-end and Delegates.
- Involved in developing interactive web pages using HTML, CSS, JavaScript, jQuery, AJAX, JSF and JSP.
- Involved in developing DAO classes.
- Involved in Developing JSP Custom tag libraries.
- Used the Log4J logging framework for logging messages at various levels.
- Involved in doing build, deployment, and configuring dependencies using Maven.
- Prepared JUnit test-cases.

Environment: Java 1.6, J2EE, JSP, JSTL, JSF, Spring, Hibernate, Web Services, MySQL, SQL, PL/SQL, TOAD, Oracle 10g, JavaScript, AJAX, HTML, CSS, jQuery, MySQL WorkBench, Log4J, Maven, Web Sphere, JUnit.

Menlo Technologies, India*May 2014 – July 2015***Software Engineer**

- Involved in the implementation of design using vital phases of the Software development life cycle (SDLC) that includes Development, Testing, Implementation, and Maintenance Support.
- Used an Agile methodology named SCRUM for all the work performed.
- Developed code for user interface by utilizing OOPS concepts like multi-threading, inheritance, polymorphism, and collection API.
- Developed JDBC code for backend processing.
- Extensively used java multi-threading to implement batch Jobs with JDK features.
- Used JavaScript for Client-side validations.
- Used Struts Framework for developing Web applications.
- Worked on J2EE/Java, HTML, and web application.
- Created user-friendly GUI interface and Web pages using HTML, JSP.
- Designed the module from scratch, including database schema design.
- Experienced in debugging the java code with all the testing tools and logic flow using Eclipse UML plug-in and rational testing tools.
- Created and implemented **PL/SQL** queries, views, stored procedures, and triggers.
- Worked with the QA team to validate the test cases if the test cases are meeting the business requirements.

Environment: Java 1.5, J2EE, JDBC, JSP, JSTL, Oracle Web Logic Server, SQL, PL/SQL, Spring Framework, Hibernate ORM, REST Web Services, Ajax, Log4J, JUnit, Eclipse 4.X, Oracle, TOAD, JavaScript, XML, JNDI, Maven, GIT.
