Professional History

Software Developer III National General Insurance Company	12/2017 to Current Cleveland, OH
Software Developer II National General Insurance Company	10/2017 to 12/2017 Cleveland, OH
Software Engineer II AmTrust Financial Services	01/2016 to 10/2017 Cleveland, OH
Software Engineer I AmTrust Financial Services	04/2014 to 01/2016 Cleveland, OH
Developer Intern GetWebEdge	02/2011 to 05/2013 Orange Park, FL

Education

Associate of Science: Information Technology Florida State College at Jacksonville Presidents List, every semester. 4.0 GPA	2010 Jacksonville, FL, United States
---	---

Experience

~6 years experience utilizing Microsoft technologies (.Net) to develop data driven web applications with C#.Net, SQL Server, and ASP.Net.

~4 years experience developing software in the P&C Insurance Industry.

Implement, update, fix, and maintain back-end code for personal lines (auto, health, life, and homeowner's insurance) websites with supporting applications.

C#.Net, SQL Server, VB.Net, and ASP.Net WebForms

Perform business logic and data-access layer development related to the application's web services and 3rd party vendor reports.

Research issues and debug code to provide bug fixes for any problems reported in these areas. Deliver top quality software solutions to support new product roll-outs and add enhancements to existing products.

Microsoft WCF and WebAPI:

Implement internal RESTful APIs to separate data access code from the business logic layer, presentation layer/user interface, and other applications.

Develop code that consumes SOAP and RESTful web services.

Implement new and maintain existing WCF services with their associated business logic integration.

Provide endpoints that wrap web service calls to 3rd party vendors for credit reports, motor vehicle reports, and insurance claims history.

Microsoft SQL Server - database design and implementation:

Create tables, stored procedures, and associated data-access code to support new web services.

Work with database support to help maintain several large databases that service multiple applications.

Embraced a new role as developer team lead in October 2017 with the following additional responsibilities:

Perform code reviews and the merging of code for team of 3-5 developers.

Work with business analysts to set team's project requirements.

Assign issues or tickets to team members.

Prioritize team's workload to ensure project deadlines are met.

Deploy Microsoft WCF and WebAPI projects to test environments.

Schedule production deployments with quality assurance.

Field inquiries from other development teams and business sponsors to ensure all parties are responded to within a timely manner and their concerns addressed.

The role still includes all of the software development aspects of my previously held developer positions.
