

ANKIT agoel3705@gmail.com

908-902-2725

PROFESSIONAL SYNOPSIS

Enthusiastic and goal oriented with the aspiration to be one of the finest full stack developers making an impact on the end users of the mobile application and website. Results-driven and tenacious achiever, adept at utilizing organizational skills, self-motivation and maximize bottom-line results. Outstanding verbal and written communications skills.

<https://www.certmetrics.com/amazon/public/badge.aspx?i=9&t=c&d=2020-02-08&ci=AWS01281170>

4 years of Java/J2EE software development experience implementing technologies such as Restful Web Services utilizing the core spring framework.

Good understanding of 12 factor app and cloud design principles.

4 years of professional experience working in the IT field in software development.

Experience in developing Android applications for Android platforms starting with Froyo and up to Lollipop.

Experience in Angular 7 framework

Experienced integrating Mobile Applications with Web applications via Restful Web Services.

Knowledgeable in MVC architecture and best practices in programming.

Solid exposure to Version Control tools such as SVN, Git, HP Quality Center.

Exposed to an automated testing environment.

Planned, designed, developed and implemented successful large-scale projects from conception to completion.

Accomplished debugging aptitude and effective support call management skills.

Successfully managed/coordinated international teams.

Seasoned requirement gathering, full cycle development planning, and implementation skills.

Strong leadership and communication skills in an Agile environment.

Great in scheduling and resource management skills.

Self-starter, fast learner, proficient in programming logic and easily adaptable to new technologies.

Good Understanding of security using SAML and OAuth in XML and HTML

Understanding the design and features(Collection APIs and bulk data streams)of Java 8

Good experience with implementing encryption algorithms such as MD5, AES and TwoFish Cipher in financial and transactional related applications.

Experience in using JPA and Hibernate ORM with Hibernate Query Language (HQL).

Worked with various JSON-Binding Providers including Jackson, Google-Gson, Flexjsonand JSON-lib.

Expertise in developing SOA(Service Oriented Architectures) and Microservice architectures using J2EE web services based on Restful(JAX-RS), SOAP(JAX_WS), JAX-RPC and JAXR(Java API for XML Registries) using frameworks like Apache CXF, Jersey, Apache Axis.

Worked on XML technologies with JAXB, JAXP, XSD, SAX and DOM parsers.

Experience with multiple Web/Application Servers such as Apache Tomcat, Jetty.

Expertise working withJava Design Patterns including Singleton, Session Facade, Front Controller, DAO, DTO and MVC.

Strong experience in RDBMS using Oracle 11g, SQL Server, Schema development, PL-SQL

programming, including experience in Oracle fine tuning, utilizing SQLLoader utility and MySQL replication setup.

Good experience with different IDE s, build & automation tools like Eclipse, STS, IntelliJ, NetBeans, Maven, Ant, SVN, CVS and GitHub, AccuRev.

Involved in developing test cases and test plans using testing frameworks like JUnit, TestNG and also used API testing tools like SoapUI, Advanced Rest Client and Postman.

Cognizant Mclean Virginia Feb 2019 Present

Full Stack Developer

During this period, I engaged with Capital One client to optimize processes related to engaging with customers who are delinquent in credit card payments. The Contact strategy cloud architecture was broken up into many different microservices communicating through lightweight mechanisms such as Kafka and utilizing big data engines like Spark for filtering large files being streamed from trusted partners with real time information regarding account statuses and payment information.

Utilized Postgre SQL for persisting collection accounts , payment information.

Utilized Amazon CloudWatch to monitor logs and capture post requests for cucumber testing

Read and Wrote to Amazon SQS queues

Read and Wrote to Amazon s3.

Authenticated with Security Token Script for generating temporary credentials to connect to SQS

Implemented Spring Boot microservices for credit card branding templates that are sent out in massive scale through different channels such as phone , email , and handwritten letters.

Utilized Java 8 features such as lambdas , streams ,and LocalDate to compute time frames to determine contact strategy approach.

Utilized Spark select , filter , join , and intersect operations to create Resilient Distributed Datasets that can be operated on to produce smaller datasets.

Implemented MapFunction interface to convert each row of the DataSet into a pojo class.

Used Liquibase to maintain database change logs and keep the database in a stable state.

Created AVRO messages to consume and publish messages with Kafka.

Constructed Jenkins Pipeline to create a seamless development to production workflow and integrated with cloud foundry to deploy instances periodically.

Cognizant Bridgewater

Full Stack Developer

Dec 2018 Feb 2019

During this period, I engaged with Cognizant learning academy to complete a series of training in different technologies and software methodologies. I worked in an agile environment and did pair programming on various assignments given through live instructors and through learning websites such as Pluralsight.

Developed dynamic UI for a fake clothing store using Angular 7 architecture.

Implemented back end APIs utilizing Spring Boot and Jhipster scaffolding.

Created secure end points and UI utilizing Spring Security and custom angular directives.

Utilized JPA repository for backing store in various assignments

Debugged applications and improved performance through sonar lint.

Created a multi branch pipeline using Jenkins and used post build events to trigger deployment to PAAS applications such as Cloud Foundry.

Created Custom Annotations for reducing code in classes such as for JSON processing and for marking purposes.

Used Angular Forms extensively for building form intensive applications utilizing Form Builder , Form Array , and Validator.

Integrated MongoDB Repository with Spring Boot applications for social networking data benefitting from the NoSQL performance and utilizing replica sets for data availability.

Utilized java streams to efficiently process large amounts of data by pipelining and filtering operations.

Gained exposure to Microservice concepts and implementations like Netflix Eureka , Zuul , and external configuration management through Spring Cloud.

Worked with all major structural , creational ,and behavioral patterns through custom implementations and in built patterns already visible in the java language.

Created Restful endpoints through @RestController

Followed TDD in projects creating integration , controller , and service level tests.

Larson and Toubro Infotech - NEW YORK

March 2018 Oct 2018

Full Stack Developer - J2EE / Android / Angular

Description: Through Larson and Toubro worked with Citibank. Citibank offers checking and savings accounts, small business and commercial banking and personal wealth management among its services.

My work included working on the CitiPay digital wallet server which facilitated the checkout process by validating the merchants, communicating with MDES for credit card verification, and finally providing checkout APIs for the mobile clients. Additionally, I worked as a front-end developer on the Citi Mobile app and website creating rich UIs for customer spending, digital account opening, and setting up financial goals.

Developed the UI layout for financial insights providing spend categorization, cash flow analysis, and starting financial goals.

Developed android libraries for displaying custom graphs depicting future savings that could be achieved in a certain timeframe based on recurring transfer frequency.

Designed and developed application based on Microservice Oriented Architecture using Spring Boot.

Utilized Angular 7 components for creating rich UI

Followed Angular Material Design concepts like Snackbar , popup dialog , and side navbar

Utilized Angular Reactive forms for creating reusable components for digital account creation, credit card applications, and home loan applications.

Utilized Java Cryptography packages specifically RSA encryption for storing of credit cards.

Utilized Angular CLI for creating base project. Organized HTML by components and modules.

Created an android library for graph components to be consumed by the main Citi Mobile app.

Bootstrap used along with Angular in creating the Application.

Validated HTTP requests using Angular interceptors

Created Custom Directives to follow Citibank UI guidelines.

Development of Client Side Validation techniques using Web RTC and JQuery and Angular JavaScript.

Designed the front-end applications, user interactive (UI) web pages using web technologies like Hybrid HTML5, XHTML, and CS.

Developed SOAP and RESTful Web Services on the server side for the mobile and the desktop portals

Defining the Email templates with XML, XSL & XSLT for new enhancements as part of leading the Agent Portal development team

Involved in developing Database access components using Spring DAO integrated with Hibernate for Accessing the data.

Provided inputs to strategy development teams to achieve best optimization techniques.

Performed basic authentication and communication using SAML2.0 with SSO POST request

Involved in writing HQL queries, Criteria queries and SQL queries for the Data access layer

Created REST APIS - the standard HTTP request and response mechanism, simplifying implementation and providing for a looser coupling of the client and server.

Used Java Collections API for aggregating data and iterating through results.

Used Core Java Libraries such as Gregorian Calendar for grouping transaction dates

Implemented Spring Framework throughout the application to utilize the benefits of dependency injection and aspect-oriented programming to reduce complexity and redundancies.

Developed the DAO layer using JPA annotation support amalgamated with Hibernate ORM API.

Conducted requirement gathering session with Android product stakeholders

Designed and developed application based on Microservice Oriented Architecture using Spring Boot,

Worked closely work with Android Product Owner to prioritize tasks for Sprint planning. Translated Sketch files into working android screens

Managed the Sprint Backlog and worked with the Product Owner to prioritize tasks for Sprint Planning and Backlog.

Adhered to Scrum values and techniques, and taught the team members how to work using Scrum processes.

Used Agile methodology in an iterative development environment with Jenkins instance for continuous integration of a Git repository on a private GitHub.

Used of Jira to manage the project, track issues, assign tasks and create epics and stories.

Used Confluence for project documentation and archiving.

Coached other team members into adhering to Agile principles.

Helped create and implementing Scrum ceremonies (meetings) for the Android mobile project.

Maintained continuous delivery with sprint cycles

Responsible for the creation and maintenance of custom APIs for the Android app.

Trained junior members to handle product support and development

Involved in testing and testing design for the application

Employed behavior-driven development with automated testing using Cucumber and Appium.

Employed Robolectric, New Relic and Crashlytics in resolving Android performance issues.
Facilitated back-end integration with Volley for asynchronous communication.
Managed Android app dependency injection with Dagger and Butter Knife.
Made use of various testing tools including Mockito, JUnit, Robotium, Robolectric, and Espresso.
Led peer code reviews to ensure Android mobile app clean code.

Technologies Used: Android, Retrofit, GitHub, Jira, Appium, Confluence, Cucumber, V1, Robolectric, Omniture, Splunk, New Relic, javascript

Veredus Jan 2016 - Dec 2017

J2EE / ANDROID DEVELOPER

Description: My client through Veredus was Verizon Wireless which engages in the provision of broadband and communication services. It operates through the following segments: Wireless and Wireline.

My work included working on the Verizon mobile app and website, making improvements, updating the UI, and improving performance. Reviewed code base and refactored code. Within the MY Verizon app, I worked on a separate flow for allowing customers to activate their phones without a sales rep through the mobile app and a paper-free initiative to allow customers to receive their bill online instead of in the mail.

Responsibilities/Actions:

Built Activities using compound and customized views

Developed and Implemented WebServices and used Spring Framework.

Developed the Presentation and Controller layers using JSP, HTML, Java Script, Business layer

Using Spring (IOC, AOP), DTO, JTA, and Persistent layer DAO, Hibernate for all modules.

Implemented Spring Framework throughout the application to utilize the benefits of dependency injection and aspect-oriented programming to reduce complexity and redundancies.

Developed the DAO layer using JPA annotation support amalgamated with Hibernate ORM API.

Conducted requirement gatherings session with Android product stakeholders

Worked closely work with Android Product Owner to prioritize tasks for Sprint planning. Translated Sketch files into working android screens

Utilized Angular routes, components, and modules for front end application.

Resolved conflicts in different streams after production releases

Provided application support to customers who face unable to process dialog box in My Verizon App after trying to execute some action such as change their data plan. To the customer, they will see this general exception but they will get the option to send some feedback to Verizon. From the Daily Report, I would trace the Session-Id of the customer in Splunk and see exactly what exception happened and wherein the code it happened. Sometimes the issue was that the customer had not paid his bill so he cannot perform a data plan change yet.

Environment: Android, Retrofit, GitHub, Dagger 2, Butterknife, MVVM, MVP, Core Java, Putty, Omniture, Bloodhound, JIRA, Jenkins, Angular, TypeScript

JAVA DEVELOPER

Description: Accenture PLC is a global management consulting and professional services firm that provides strategy, consulting, digital, technology and operations services.

Originally I started as a subcontractor to Accenture through Experis assisting with the Los Angeles County Welfare project and joined full time with Accenture to continue working with government related projects.

I mostly worked with the State of Michigan to help develop key components and rules involved in calculating child support payments. Additionally creating responsive UI elements for state workers to manage child support cases.

Implemented PL/SQL procedures to promote the idea that database changes will only be needed rather than have to deploy jar to the production server. The app is structured such that JSON sent from backend server dictates the look and feel of the entire screen.

Created and run unit tests using Karma.

Implemented communication with the server using angular services \$http.

Integrated Spring Web flow for maintaining navigational flows and used JSPS for the user interface.

Developed multiple Angular JS controllers and configured routes which were conditioned on certain criteria met on a child support case.

Utilized Bootstrap containers for organizing features on the website.

Used Angular JS currency filter for displaying amounts paid by child support parents.

Maintained complicated relationships between database entities using hibernate mapping annotations.

Monitored Server logs using Splunk to help with production defects.

User interface access control for state workers through

Implemented JAXB mappers and objects for communicating with mainframe system.

Design and development of many PL/SQL batches using JAVA with connectivity to Oracle for data maintenance and handling

Testing the web services using SoapUI user can do crud operation returning into JSON

Created db tables, functions, Joins and wrote prepared statements using PL/SQL

Created complex SQL and used JDBC connectivity to access the database

Java, JSP, Servlets, Struts, Spring, AWS, Oracle, SOA, WebSphere, TOAD, HTML 5, CSS, XML,

Angular Js, Mongo DB, TOAD, SVN, Node Js, ESB, Jenkins, SOAP, Log4J, Junit

Creation of REST Web Services for the management of data using Apache CXF

Created all the services to work with the various entities provided and testified the services using REST APIs

Engaged with Eclipse for visually designing, constructing, testing and deploying J2EE application and web services.

Created the domains, application servers and load balancers using Weblogic.

Transformed the QA into a fast -paced agile team and drove daily stand up scrum meeting.

Environment: Java, Spring, Hibernate, Struts, JQuery,, GitHub, Jira, Appium, Confluence, Cucumber, V1, Robolectric, Omniture, Splunk, New Relic, Rx Java.

PROFESSIONAL EDUCATION

Bachelor of Arts in Computer Science, New York University, 2009 - 2014
