PROFESSIONAL SUMMARY

SQL Server DBA who has been supporting database applications for more than 8 years in SQL Database Administration, System Analysis and Design, Development & Support of MS SQL Server 2012 to 2017, in Production, Development & VMware Environments.

SKILLS SUMMARY

- Strong knowledge of backups, restores, recovery models, DBCC commands, Clustering, Log Shipping, Mirroring, and Replication.
- Experience in troubleshooting and resolving performance issues, blocking and deadlocking issues, database integrity issues, security issues, log shipping issues.
- Database administration including installation, configuration, upgrades, capacity planning, performance tuning, backup and recovery in managing clusters of SQL servers.
- Performance and Tuning using Database Tuning Advisor, Quest - Performance Analysis, T-SQL, and SQL Dashboards.
- Use SQL Profiler for troubleshooting, monitoring, and optimization of SQL Server and SQL code.
- Modify stored procedures, queries, views, indexes, and functions to handle business rules, history data and audit analysis.
- Manage the production and development databases including performance tuning, capacity planning, SQL Server clustering, database security configuration, and database continuity.
- Support Management Studio, SQL Profiler, Database Engine Tuning Advisor (DETA), SQL.
- Extensive knowledge in Microsoft SQL Server databases, as well as SSIS, DTS packages, T-SQL, performance tuning, database design and data warehousing.
- Ability to ensure the technical integrity of corporate databases by protecting against the loss or misuse of information and designing backup/recovery strategies.
- Support various MS SQL Server environments from SQL Server 2005 thru SQL Server 2008r2 as well as with SQL Server 2012 on Windows Server 2003, 2003r2, 2008, 2008r2 and 2012 to 2019.
- Excellent analytical, communication skills, work ethics and ability to work in a team environment with strong determination and commitment to the deliverables.
- Worked on Amazon Web Services (EC2, ELB, VPC, S3, CloudFront, IAM, RDS, Route 53, CloudWatch, SNS,).
- Server's, Domain's and Database's migration on Amazon Web Services.

- Installed and Setup Web Servers (Apache and Tomcat), DB Server (MySQL).
- MySQL Database backup (Hot/Cold) and recovery, repair and optimize tables.
- MySQL Database security, creating users and managing permissions.
- Manipulation of shell scripts; php scripts and java scripts during migration and dB connection.
- Monitor Production Server Health of different parameters (CPU Load, Physical Memory, Swap Memory, Hard disk, MySQL service, Http service and response time) via MRTG, Nagios.

PROFESSIONAL WORK EXPERIENCE

ARMADA SUPPLY CHAIN SOLUTION (ATLANTA, GA)
SQL DATABASE ADMINISTRATOR (April 2015 - Present)

Responsible for installing SQL Server database instances in all environments including but not limited to development, Quality Analysis and Production.

- Manage the products and development databases including performance tuning, capacity planning, SQL Server clustering, database security configuration, and database continuity.
- Using Data availability solutions like Online Restore, Online index operation, Database Snapshot and Fast Recovery.
- Assists application team in the creation of databases, construction of queries, modification of database tables, and troubleshooting data issues.
- Responsible for importing as well as exporting data to and from the SQL Server using BCP, DTS and SSIS.
- Documentation of Server Builds specifications and Security features. Participating in process, application and database audits.
- Maintained the proper use of storage space requirements as well as adding new storage space (disk drives) when appropriate.
- Monitoring Event Viewer, SQL Error logs and Log File Viewer for Software and hardware related errors.
- Support of the SQL Server Databases including database performance tuning, installing and upgrading SQL Server and its databases, clustering, monitoring database health, coordinating with storage teams on capacity planning and storage distribution, backing up and restoring databases, maintenance of database users and security, database development, data transfer and replication, mirroring, and server diagnostics and analysis.
- Designing, Implementing and maintaining database schema, entity relationship diagrams, data modeling, tables, stored procedures, constraints, indexes, functions, views, rules, defaults and complex SQL statements.
- Ensuring that the detailed physical design of database and data structures comply with data policies, standards, principles, and meets the established level of service agreements/goals for the system.

- Support the Use of scripts and SQL Agent jobs to automate database maintenance tasks.
- Perform proactive maintenance of all mission critical databases (small and large).
- Engaged in Strategic Planning, Implemented and supported high availability (HA) and disaster recovery (DR) solutions via log shipping and database mirroring along with proper backup strategies across multiple SQL Server instances.
- Coordinates and configures new nodes for production server clusters for high availability.

G4S SECURITY SOLUTION. (ATLANTA, GA)

Database Administrator (March 2013 - April 2015)

- Implemented security policy design for current and new applications to prevent data corruption and theft.
- Installation and configuration of MS SQL Server 2012 – 2017 versions.
- Assisted in establishing standards and schedules for database backups by making sure that the backup schedules meet the recovery requirements on a daily, weekly, and monthly basis.
- Monitoring the CPU usage, IO statistics, Memory Usage to identify any OS level performance killers, enabling database level trace for performance test.
- Troubleshoot performance-tuning issues by running SQL server Profiler, creating trace and run these traces in SQL Server Database Engine Tuning Advisor and analyzing the reports.
- Perform various standard DBA task and created and deleted databases and database objects, when necessary.
- Monitored table and disk utilization and database fragmentation and created trace files and validate any issues on the database in question.
- Responsible for driving the consolidation and upgrade efforts of all database systems into SQL Server 2012.
- Revise and improve current monitoring strategies for the entire database enterprise (Introduced and setup SolarWinds and SQL Sentry).
- Automated the process of monitoring G4S SECURITY SOLUTIONS entire inventory of SQL Servers to ensure good backups of all servers using T-SQL Scripts.
- Checked Database Consistency/health by using DBCC Commands & DMVs at regular intervals.
- Standardize processes for the DB team by creating documentations for installations, migrations, upgrades, backups, restores, index maintenance.
- Planning and Implementing High Availability and Disaster Recovery solution without interruption.
- Worked with team to ensure appropriate hardware resources are allocated and worked with users to develop and optimize their SQL Server queries.
- Setup and configured Database mirroring in High Performance, High availability mode as standard DR strategy.

ICTS SECURITY SERVICE (LONDON, UNITED KINGDOM).
SQL SERVER DBA (APRIL 2012 - MARCH 2013)

- Developing and maintaining O&S operating procedures for the Compute infrastructure in addition to providing on-the-job training to AIT O&S Tier II personnel.
- Perform SQL administrative tasks including installing and upgrading SQL server products, creating maintenance plans, and creating database objects.
- Install, configure and deploy MS SQL Server, perform capacity planning, performance tuning, monitoring, troubleshooting and optimization of the databases.
- Prepares users by conducting training, providing information, resolving problems.
- Designing and running system load/stress testing, escalating application problems to vendors.
- Standardize and manage Database Administrator procedures for monitoring database performance, testing, archiving, and optimizing.
- Maintenance and support of SQL server Mirroring, Log shipping, Clustering, and other methods of disaster recovery.
- Assist developers with MS SQL Server issues and questions.
- Administer and monitor 24/7 applications and systems, developing automated alerts to warn of failure.
- Design, develop, test, deploy and maintain database security and audit solutions.
- Help developers improve the performance of that query by tweaking it or modifying indexes.
- Provides support in capacity planning, forecasting, and tuning. Develops performance/tuning evaluation reports.

EDUCATION

Olabisi Onabanjo University, Nigeria.
Bachelor's Degree in Public Administration

NSTAR Technologies Atlanta, GA -
Certificate Program – SQL Database Administration
