Profile

Passionate Engineering Graduate specializing in AI and Data Science, eager to apply advanced analytical skills and problem-solving abilities to drive impactful data-driven solutions. Seeking to contribute to cutting-edge projects and grow professionally in a dynamic environment.

Education

St. Joseph's College of Engineering	2021 – 2025
B.Tech in Artificial Intelligence and Data Science	CGPA: 8.70/10
Sri Krishna Matric Higher Secondary School	2020 – 2021
Higher Secondary Certification (HSC)	94.48%

Skills

Programming Languages: Java, Python, SQL

Technologies: Machine Learning, Data Analysis, Pandas

Experience

Database Management and Data Analysis, ICMR-NIRT Jan 2024 – May 2024

- Designed secure web forms for TBL study using **HTML, CSS, JavaScript, and PHP** digitized paper records; performed statistical analysis to derive patient insights, enhancing accessibility and efficiency.

Data Analyst Intern, Technocolabs Software May 2023 – July 2023

- Built **machine learning models** to predict borrower risk, identified loan default factors, conducted exploratory analysis for insights, and optimized portfolios, improving decision-making for **P2P** lending initiatives.

Projects

Analyzing Customer Sentiment Towards Earphones

Analyzed customer reviews using TextBlob and VADER for initial sentiment extraction, followed by building robust sentiment analysis models leveraging deep learning and machine learning techniques, including LSTM and XGBoost. Conducted in-depth analysis to uncover trends, identifying sound quality as a key customer preference

Food Demand Forecasting

Forecasted demand for center-meal combinations over a 10-week period using historical data, employing advanced machine learning techniques. Applied ensemble methods and fine-tuned CatBoost and LightGBM regressors for optimal performance. Conducted extensive feature engineering to extract meaningful insights, enhancing model accuracy and reliability in demand prediction

Autism Facial Image Analysis

Developed a machine learning pipeline for ASD classification using EfficientNet B7, ResNet50, Vision Transformer (ViT), and an ensemble model. Trained models on ASD facial images, leveraging Grad-CAM for explainability. Achieved 86% accuracy with EfficientNet B7, while the ensemble model demonstrated the highest recall, enhancing diagnostic reliability.

Certifications

DataBase Management System, NPTEL

Introduction to Machine Learning, NPTEL

Python Programming for Everybody, Coursera
