Experience

Marin Software

Senior Software Engineer | Lead Software Engineer | 03/2024 - 04/2025

Marin Software is a leading provider of cross-channel advertising solutions, empowering businesses to optimize their digital marketing strategies. At Marin, focused on building secure, scalable, and high-performance software solutions while collaborating with cross-functional teams to meet business goals and improve platform capabilities.

- Updated a legacy monolithic application to microservices architecture using ASP.NET and Azure cloud platform, resulting in an increase in overall system performance.
- Designed and implemented RESTful APIs using ASP.NET Core Web API, facilitating seamless integration with third-party partners.
- Introduced an event-driven architecture for a lead management system, reducing performance latency to sub-second levels.
- Deployed and optimized stored-procedures using Entity Framework Core in MS SQL Server, streamlining database operations and achieving a reduction in query response time.
- Utilized MSTest in ASP.NET, including the setup of test projects, the implementation of arrange-act-assert patterns, and the execution of both unit and integration tests.
- Conducted code review process and mentored two junior developers, providing comprehensive guidance on coding standards and best practices.
- Experienced a CI/CD pipeline using Docker, AKS, and Azure DevOps, reducing deployment time and increasing scalability compared to the previous approach.
- Actively participated in the Scrum ceremonies and played a key role as a collaborative team player, ensuring seamless communication and successful project execution.

SpinSys-Diné

Senior Software Engineer | Tech Lead | 08/2019 - 03/2024

SpinSys-Diné specializes in delivering innovative solutions for healthcare IT, cloud computing, and enterprise systems. Played a key role in developing scalable software solutions that enhanced system performance and reliability while integrating cutting-edge technologies into core business features.

- Contributed to the success of a startup company by serving as the lead engineer, providing technical leadership and enhancing team efficiency.
- Excelled in every phase of the Software Development Life Cycle (SDLC), consistently delivering high-quality software solutions from inception to deployment.
- Updated legacy VB.NET to ASP.NET Core, ensuring seamless transition and improved performance.
- Implemented MVC architectures with ASP.NET Core Blazor, Telerik Kendo UI, LINQ, and EF Core according to 20+ Figma designs and business requirements.
- Maintained and modernized legacy WebForms applications, implementing improvements for performance, security, and user experience.
- Constructed robust Single Page Application (SPA) for mobile and web platforms using Angular, React, and Vue.js, ensuring precise application requirements through tailored controllers and directives.
- Developed and updated RESTful, SOAP, and GraphQL web services using ASP.NET and ASP.NET Core frameworks, ensuring efficient data exchange and interoperability.
- Implemented advanced customization and branding techniques for SSRS reports, tailoring them to meet specific organizational and client requirements.
- Utilized Apache Kafka to facilitate seamless communication and data streaming between microservices, enabling real-time data processing and improving overall system performance.
- Integrated services like Github, AWS CodePipeline, Jenkins and AWS Elastic Beanstalk to create a deployment pipeline.
- Worked closely with cross-functional teams, including product managers and designers, to translate concepts into functional MVPs, ensuring alignment with business objectives and user needs.
- Attained 90% code coverage by applying Test-Driven Development with Cypress, Moq, MSTest, and Swagger ensuring the robust and reliable software.

Booz Allen Hamilton

Software Developer | 06/2016 - 08/2019

Booz Allen Hamilton is a global consulting firm specializing in technology, analytics, and engineering solutions for government and commercial clients. Contributed to the design and development of backend services, database schemas,

and CI/CD pipelines to support enterprise-level applications and ensure system scalability.

- Collaborated with cross-functional teams to migrate 3 existing VB.NET applications to the latest technologies and best practices.
- Upgraded a complex ASP.NET Web Forms project to ASP.NET Core MVC, resulting in a reduction in page load times, from 3 seconds to 1 seconds.
- Implemented a RESTful architecture, driving a significant reduction in communication overhead and a substantial increase in development efficiency.
- Integrated third-party services into applications, such as payment gateways, resulting in a reduction in development time.
- Developed and maintained SOAP/REST web services for various projects, enabling seamless communication between frontend and backend application.
- Created a NuGet repository to host and manage internal packages, streamlining the distribution of product updates.
- Demonstrated expertise in SDLC processes, spanning requirements/issue management, defect tracking, source control, build and test automation, and release management using tools like GIT, BitBucket, and JIRA.
- Showcased proficiency in development methodologies like Agile.

Education

College of Charleston

05/2013

Bachelor of Science, Computer Science

Skills

C/C++, C#, .NET, ASP.NET, VB.NET, PowerShell, Python, Angular, React, Next.js, Vue.js, KendoUI, Razor, Xamarin, REST, SOAP, GraphQL, Entity Framework, ADO.NET, LINQ, Kafka, RabbitMQ, JavaScript, TypeScript, HTML5, CSS, jQuery, jQuery, Bootstrap, SQL Server, MySQL, PostgreSQL, T-SQL, MongoDB, Oracle, PL/SQL, Azure, AWS, MSTest, Cypress, Moq, XUnit, NUnit, Jira, Git, GitHub, TFS, Azure DevOps, Agile
