

SHILPA PARIKH

East Brunswick, NJ 08816 | +1 (908) 307-7942 | sshilpap555@gmail.com | US Citizen | [linkedin.com/in/shilpa-parikh](https://www.linkedin.com/in/shilpa-parikh)

Experienced Quality Assurance Engineer specializing in software quality assurance. Skilled in developing test plans, executing test strategies, and managing test data in Agile and Waterfall environments. Proficient in RESTful API testing, XML validation, and using tools like JIRA and Rally for defect management. Experienced in UAT support and ensuring high-quality deliverables through meticulous testing and collaboration. Conversational AI and NLP/NLU specialist for IVR and AI chatbot solutions. Proficient at translating business requirements into testable deliverables and creating system flows, use cases, and business rules.

Professional Experience

- Senior Test Analyst | Cognizant - UnitedHealth Care - Optum | Remote****Jul 2023 – May 2024**
- Automated and manually tested key components such as key components such as Agent Desktop (WWE), GAX, Voice (outbound dialer with case data), Simulator, SMS, Email, IVR Call Flow, Conversational AI, Survey, Agent Functions, ensuring comprehensive functional coverage, and alignment with business requirements.
- Senior UAT and QA Consultant | Sogeti - Johnson and Johnson (JNJ) | Remote****Nov 2021 – Mar 2023**
- Led Salesforce API integration tests with Amazon Connect (AWS) Cloud Contact Center - IVR, confirming successful caller authentication and call routing functionality.
- Software QA Analyst | Tanisha Systems – Aetna, a CVS Health Company | Remote****May 2021 – Oct 2021**
- Healthcare IVR data-driven API application uses AI IBM Cloud based Watson technologies that enables process/respond to voice/text inputs in natural ways (NLG/NLP/NLU) - Chatbot intelligent virtual agents (IVAs).

Prior Relevant Experience

- Quality Assurance Analyst | AddTeq | Remote Freelancer****Feb 2020 – May 2020**
- Senior IVR Business Analyst - Quality Engineer | AT&T | Middletown, NJ****Jun 2004 – Mar 2019**

Technical Skills | Tools | Responsibilities

AI Chatbot Conversation | QA Responsibilities:

- Test Case Design & Automation: Developing comprehensive test cases for chatbot interactions, covering edge cases, negative scenarios, and real-world user behaviors. Test closure includes documenting results pass fail, defect, and refining strategies for future sprints.
- Multi-Modal Testing: Validating chatbot performance across text, voice, and visual interfaces, ensuring consistent interactions across platforms.
- Natural Language Processing (NLP): Assessing the chatbot’s ability to handle varied phrasing, synonyms, misspellings, sentiment shifts, and multilingual inputs.
- Compliance & Security Validation: Ensuring chatbot interactions adhere to PCI and accessibility regulations, protecting user data and privacy.
- Cross-Browser Compatibility: Verify that web applications operate correctly across Chrome, Firefox, Safari, Edge, and other browsers.
- Context Retention: Verifying the chatbot’s ability to maintain conversation history, recall previous interactions, and personalize responses.
- Intent Recognition & Response Accuracy: Evaluating the chatbot’s ability to interpret user intents correctly and provide accurate, relevant responses.
- Agent Handoff & Routing Testing: Ensuring seamless transition from chatbot to live agents, verifying routing accuracy based on user needs and skill.

- Omnichannel Functionality Testing: Testing chatbot interactions across websites, mobile apps, messaging platforms, IVR systems, and third-party integrations.
- Edge DevTools Debugging: Utilizing Edge's built-in DevTools for inspecting elements, analyzing network requests, and debugging.
- Error Handling & Fallback Scenarios: Validating chatbot responses for unsupported queries, ambiguous requests, system downtime, and adaptive failovers.
- Execution & Reporting: Utilizing analytics and logging to track chatbot performance and user engagement.

End-to-End IVR Testing Coverage:

- Call-Flow Logic: Reviewing and validating call flows and requirements, greetings, language selection, main menus, submenus, utterances, grammar, and error handling.
- IVR & Data-Driven Decisions: Ensuring that Interactive Voice Response systems are functioning correctly, including accurate navigation, voice recognition, proper execution of prompts, data decision flows, fallback handling, callback functions, holiday scheduling, and long-hold messaging and call routing.
- Defect Identification & Logging: Detecting defects through various testing activities and logging them with severity, priority, and detailed descriptions.
- Regression & Sanity: Validating recent bug fixes, ensuring new features do not impact existing functionality, and conducting smoke tests after builds.
- Voice & DTMF Input Validation: Ensuring playback accuracy (Text to Speech) for details like dates and amounts and checking logs using UUID, ANI, TFN/DNIS, or TIMESTAMP.
- RESTful API: Validating HTTPS requests (GET, PUT, POST, DELETE), authentication, database updates, and response status codes (100-500).
- Bullseye Routing Expertise: Configuring queue-based agent prioritization with multi-ring escalation.
- PCI Compliance & Usability: Verifying sensitive data protection (SSN, DOB) are encrypted or masked.
- Reporting & Call Analysis: Assessing call reporting, agent details, and tracking interactions.
- Agent Desktop & Queue Routing: Assessing call pickup, Status, CTI data popups, wrap codes, hold, transfer, Chat and conference. Ensuring Queue call routing based on skill, department, language, and callback.

Agile Sprint QA:

- Participating in daily stand-ups, reviewing, estimating, prioritizing, and approving user stories from EPIC and backlog to ensure alignment with business requirements.
- Assessing acceptance criteria, dependency, and traceability, providing feedback to improve sprint execution.
- Conducting sprint retrospectives with Agile team to identify gaps in test cases, requirements, environment issues, code errors, refining processes for continuous improvement.

Back-end and API Protocols: SQL, XML, Batch Processing, UNIX, Linux, TCP/IP, HTTP/HTTPS, REST API, XML

Technologies: Amazon Connect (AWS), Genesys Cloud (IVR-Salesforce Integration), Conversational AI (NLP/NLU, IBM Watson), ASR, TTS, Cisco ICM CTI, AI Prompt Engineering, Genesys Engage

Automation Tools: Cyara, Empirix Hammer on Demand, CallMaster

Test Data Management: Data Profiling, Verified Data Masking, Synthetic Data Generation

Tools: JIRA, Rally, SharePoint, WebLogic, MS Office, Toad for Oracle, Confluence, Zephyr, Excel, Visio

EDUCATION

Bachelor of Science in Engineering | New Jersey Institute of Technology | Newark, NJ
 Certification, IATO IVR Application Testing | CYARA ACADEMY | Virtual
