Summary

Highly accomplished software engineer with over 12 years of experience designing, developing, and leading scalable enterprise solutions across healthcare and technology domains. Expertise in ASP.NET Core, Azure, AWS, microservices architecture, and RESTful API development, with a proven track record of improving performance, scalability, and reliability. Skilled in DevOps practices, CI/CD pipelines, containerization (Docker, Kubernetes), and database optimization using MS SQL Server and Entity Framework Core. Adept at mentoring teams, delivering high-quality code, and driving innovation through event-driven architectures, message brokers, and cloud-native solutions.

Professional Experience

Senior Software Engineer | Lead Software Engineer

August 2021 - Feb 2025

HerMD, San Francisco, CA

- Migrated a legacy monolithic application to a microservices architecture using ASP.NET and Azure, which significantly improved performance and scalability.
- Built secure and scalable RESTful APIs with ASP.NET Core, enabling smooth and HIPAA-compliant integration with external healthcare systems.
- Implemented an event-driven architecture for a clinical lab system using message brokers, reducing latency and enabling real-time processing.
- Improved app performance by 30% by optimizing SQL queries, tuning MS SQL Server, and using Entity Framework Core and stored procedures effectively.
- Set up robust unit and integration testing using MSTest, applying best practices to ensure code quality and reduce bugs early in development.
- Automated build, test, and deployment processes using Azure DevOps, Terraform, Docker, and Kubernetes, which cut deployment time and reduced downtime.
- Integrated SonarCloud with DevOps pipelines to improve code consistency, enforce quality standards, and support continuous delivery.
- Mentored junior developers through code reviews and weekly knowledge-sharing sessions, helping raise code quality and team capability.

Senior Software Engineer | Team Lead

February 2016 - August 2021

NantHealth, Panama City, FL

- Led the transition of legacy monolithic systems to cloud-native microservices using ASP.NET Core and Azure/AWS, which improved performance and maintainability.
- Designed and built messaging systems using RabbitMQ and Kafka to support asynchronous communication and scale complex healthcare applications.
- Improved data access by integrating LINQ to SQL and optimizing ADO.NET, cutting database query response time by 50%.
- Developed ETL processes using SSIS to move data from operational to reporting databases, balancing load and improving analytics speed.
- Wrote and maintained test suites using Jasmine and Cypress to ensure front-end components worked reliably and met healthcare compliance needs.
- Set up application monitoring with Serilog and Application Insights, which improved visibility into issues and sped up troubleshooting.

- Built and maintained CI/CD pipelines using Azure DevOps, Docker, and AKS, reducing release time and ensuring reliable deployments.
- Managed Git repositories, integrated Jenkins for build automation, and used JIRA for tracking work—improving code quality and traceability.
- Led Agile Scrum teams, planned and delivered sprints, and consistently hit project milestones with over 95% completion rate.

Software Engineer

July 2012 - February 2016

Curotec, Newtown Square, PA

- Led the modernization of three legacy VB.NET applications by collaborating with cross-functional teams, aligning solutions with client-specific goals and delivering scalable, maintainable systems.
- Rebuilt a slow-performing Web Forms app in ASP.NET Core MVC, cutting load times from 3 seconds to under 1 second and improving the user experience.
- Designed RESTful APIs that made system-to-system communication more efficient and reduced dependency issues between teams.
- Integrated third-party services like payment gateways and analytics APIs, speeding up development while keeping the codebase secure and clean.
- Developed and maintained both SOAP and REST APIs across client projects, ensuring consistent and reliable communication between front-end and back-end.
- Upgraded WCF services into a service-oriented architecture (SOA), which made it easier to integrate with other platforms and sped up development.
- Created and managed a private NuGet package repository to help teams share code and speed up development workflows.
- Took ownership of end-to-end delivery, including requirements gathering, bug fixes, source control, CI/CD setup, and release management using Git, Bitbucket, and JIRA.

Education

Bachelor of Science in Computer Science

May 2012

Vanderbilt University, Nashville, TN

Skills

- C++/C#, VB.NET, LINQ, SQL, JavaScript, TypeScript, HTML, CSS, Tailwind CSS
- ASP.NET Core, ASP.NET MVC, Entity Framework Core, ADO.NET, MSTest
- Azure (DevOps, AKS, Application Insights), AWS, Terraform, Docker, Kubernetes
- RabbitMQ, Kafka, RESTful APIs, SOAP, GraphQL, gRPC, WCF, Serilog, ETL
- MS SQL Server, SSIS, Redis, MongoDB, Stored Procedures, Application Monitoring Tools
- Git, Bitbucket, Jenkins, Azure DevOps, JIRA, Agile Scrum, Sprint Planning
