

Jignesh Savaliya

Database Engineer | Citizen

jigneshsavaliya.it@gmail.com | (920) 350-1212

Summary:

Strong results driven Senior Data & Azure Database Engineer with over 8 years of hands-on experience designing, developing, and optimizing enterprise-scale data solutions across financial, insurance, and capital management sectors. Proven track record in building secure, scalable, and high-performance data platforms using the Azure ecosystem, modern data engineering principles, and traditional SQL development practices.

Expert in architecting and orchestrating complex ETL/ELT pipelines using Azure Data Factory, SQL Server, and integrating data from diverse sources including on-prem databases, APIs, and cloud storage. Strong command over T-SQL, stored procedures, indexing, and query optimization to deliver performant backend solutions that drive BI, reporting, and analytics outcomes.

Establishing robust governance frameworks using Azure Key Vault, Azure Monitor, and Log Analytics. Adept at enhancing data reliability and quality through schema validation, automated quality checks, and detailed documentation.

Skilled in delivering impactful Power BI dashboards with DAX, Power Query M, and RLS, translating raw data into business insights used by executives, product owners, and operational teams. Designed over 50+ dynamic dashboards supporting real-time analytics, historical trend tracking, and KPI-driven decisions. Adept in role-based access, gateway configuration, and refresh scheduling to ensure data accuracy and accessibility.

Recognized for leadership in mentoring junior engineers, establishing best practices in data pipeline design, and fostering a culture of technical excellence and cross-functional collaboration. Hands-on experience in Agile/Scrum environments, regularly interfacing with stakeholders, QA, and security teams to align technical deliverables with business strategy.

Technically proficient across a wide suite of tools including On Prem SQL Server (2012–2022), Azure SQL, Azure Data Lake Gen2, ADF, Power BI, SSRS, SSIS, Git, experienced in data modeling, dimensional modeling, data lineage tracking, and ensuring GDPR/PII compliance across reporting and analytics ecosystems.

A reliable problem solver with strong communication and documentation skills, committed to delivering high-quality solutions in complex, data-intensive environments.

Technical Skills:

Databases & Development: SQL Server (2012–2022), T-SQL, Stored Procedures, Views, Functions, Indexing, Query Optimization, SSRS, SSIS, SSMA, Schema Design, SQL Profiler, SQL Server Agent, Database Maintenance Plans

Cloud & Azure Stack: Azure Data Factory, Azure SQL Database, Azure Data Lake Gen2, Azure Monitor, Azure Key Vault, Azure Logic Apps, Azure Blob Storage, Azure Synapse Analytics, Azure Resource Manager (ARM) Templates, Azure DevOps Pipelines, Azure Purview (basic exposure)

Data Integration & DevOps: ETL/ELT Pipelines, CI/CD with Azure DevOps, Git Source Control, YAML Pipelines, Build & Release Automation, Parameterization, Linked Services, Datasets, Integration Runtime

Visualization & Reporting: Power BI, Power BI Service, Paginated Reports, DAX, Power Query M, SSRS, Excel Dashboards, KPI Visualization, Drill-through Reports, Row Level Security (RLS), Scheduled Refresh, Role-Based Access

Governance & Quality: Data Modeling, Dimensional Modeling, Data Governance Policies, Data Lineage Tracking, Schema Validation, Automated Data Quality Checks, GDPR/PII Compliance, Version Control for Data Assets

Soft Skills: Mentoring, Cross-functional Collaboration, Agile/Scrum, Stakeholder Communication, Documentation, Requirements Gathering, Problem Solving, Process Improvement

Professional Experience:

JPMorgan Chase Bank, New York, NY
Senior Database Engineer

July 2022 – Present

- Designed, built, and maintained scalable Azure Data Factory pipelines integrating over 20 data sources including APIs, SQL Servers, Oracle DBs, and cloud data lakes.
- Worked on a large-scale project utilizing the Medallion architecture (Bronze, Silver, Gold) to enable efficient and maintainable Power BI reporting for business users.
- Created ADF pipelines for daily ingestion into the bronze layer, handling incremental data loads from multiple heterogeneous sources.
- Built transformation logic in the silver layer, implementing cleansing, standardization, and enrichment processes to ensure data quality and consistency.
- Engineered the Gold layer in Parquet format, optimized for high-performance Power BI semantic models, enabling fast, interactive dashboards.
- Coordinated with cybersecurity to integrate Azure Key Vault for secret rotation, secure credential storage, and key management.
- Designed metadata-driven frameworks for parameterized pipeline deployment, increasing reusability and reducing development time.
- Conducted pipeline code reviews, implemented best practices, and enforced naming standards to improve collaboration and maintainability.
- Partnered with product managers, analysts, and architects to translate business logic into scalable data transformations.
- Spearheaded documentation efforts including data flow diagrams, process maps, and data dictionary creation.
- Mentored junior engineers through knowledge-sharing sessions, hands-on demos, and pair programming activities.

Allstate Insurance, Glenview, IL
Senior Database Developer

Feb 2019 –Jun 2022

- Designed and deployed over 50 enterprise-grade Power BI dashboards serving executive, operational, and field-level users with real-time and historical data views.
- Migrated key reporting solutions from legacy Excel-based systems to Power BI and SQL Server, improving accuracy and reducing report generation time by 50%.
- Automated data pipelines using Azure Data Factory to ingest and transform daily transactional data from SFTP, APIs, Excel files, and flat files.
- Built complex T-SQL stored procedures, views, and indexes to support efficient data retrieval and reporting performance across multiple business domains.
- Developed and enforced role-based security using Row-Level Security (RLS) in Power BI, enabling granular access control across business units.
- Established centralized data marts and dimensional models supporting sales, retention, and client behavior analytics.
- Designed ETL error handling frameworks, implemented retry logic, and integrated pipeline failure notifications.

- Configured Power BI Gateway and Service features for scheduling refresh, alerting, email subscriptions, and SLA monitoring.
- Participated in Agile ceremonies, managed sprint deliverables, and collaborated with QA for UAT validations.
- Led reporting modernization initiative that enabled leadership across 10+ regional offices to access unified insights.
- Coordinated quarterly audit reviews ensuring compliance with internal data governance and PII handling policies.
- Acted as L2 support and triage contact for reporting/data issues impacting underwriting, claims, and marketing divisions.

Mayo Clinic, Phoenix, AZ
Database Developer

Aug 2017 – Jan 2019

- Migrated legacy ERP and payroll data from VB6 and Access databases into normalized SQL Server schemas, reducing system fragility and improving reporting speed.
- Created and managed stored procedures, scalar and table-valued functions, triggers, and views to support business rule enforcement and system workflows.
- Developed SSRS reports and interactive Excel dashboards to deliver client billing, compliance, and portfolio performance reports.
- Automated ETL operations for monthly data consolidation using T-SQL, CSV parsing, and bulk data loading.
- Led root cause analysis sessions for data discrepancies and implemented preventative measures via test harnesses and data profiling routines.
- Supported daily database operations including index rebuilds, backup management, SQL Agent job monitoring, and permission audits.
- Conducted UAT testing, coordinated with QA, and created detailed documentation and SOPs to facilitate cross-team knowledge transfer.
- Collaborated with finance teams to define data specs and implement audit-compliant data retention policies.

Education:

Bachelor degree in information technology
