David Lokesh Professional Mahalingam (PMP/PgMP) (mobile),

CAREER SUMMARY:

Organizations are provided Secure Transactional Business Process Automation with Big Data libraries supporting long term records retention, and transparency through standard reports to meet regulatory requirements. Successful core business process automation delivered to Life Sciences Financial Service, Manufacturing, Healthcare, and Federal/State/Local Government organizations. Core processes automated include securities trading, insurance policy origination, claims processing, clinical trials, onboarding customer accounts, fulfilling purchase orders, loan applications, and business operations.

Program Management services manage transition to enterprise solutions, both cloud hosted, and premise based. Project Management Institute best practices initiating, planning, executing, controlling, and closing projects is rigorously implemented, Stakeholders and team members are kept informed of progress, risks and alternatives to achieve milestone deliverables.

End-to-End Complex Processes automation delivered, scalable to billions of transactions with monitoring, screening, and fraud detection supporting:

- FDA Drug Development and Approval through Phase I-III trials and Phase IV real world evaluation
- SEC/FINRA Compliance and Governance
- Health Insurance Portability and Accountability Act (HIPAA), protected health information security.
- The Health Information Technology for Economic and Clinical Health (HITECH), Storage and transfer of confidential information under strict supervision, PHI encryption both in storage and transfer modes,

CORPORATE DEVELOPMENT

Corporate Development has been achieved through customer focused organic growth and Merger & Acquisition programs achieving both increased market share and sales growth year-over-year. A centralized, comprehensive, outcomes-based approach is employed to validate the strategic fit and operational success criteria. Programs target first customer needs within the customer base to increase penetration, then opportunities in complementary market niches.

Merger & Acquisition based corporate development strategies have successfully achieved 49% sales growth year-over-year expanding market participation or entering unaddressed market segments. Core employee interviews are conducted to make preliminary decisions regarding which features/functions/roles are best suited for the combined business. The organizational structure of the acquired company is aligned with the long-term strategic objectives of the combined company.

During operational integration, regular meetings with the acquired company staff keep everyone informed, monitor progress, identify any changes and maintain focus on critical success factors.

TECHNOLOGY

Multi- server High Throughput, High Availability, Extended Enterprise Class, Secure Web Services.

PLATFORMS:

DOMAIN EXPERTISE

Lean Six Sigma Business Process Improvement
Internet Hosted services:

- Amazon Web Services (AWS)
- Microsoft: Azure Service Fabric

Enterprise Content Management
SW Development Life Cycle (Waterfall, Agile)
Health Information Technology (HITECH).
Life Science/biopharmaceuticals
Regulatory Agency Compliance

Solutions Implemented (partial list):

- Johnson and Johnson Electronic Clinical Trial Registry:
Platform to automate clinical trial data management
- Novartis Institute for Biomedical Research (NIBR)
Decision Support Environment
- Bank of New York: Custodial Securities & Trade Records
- Prudential Financial Transaction Processing (1M per day)
- City of Detroit Land Management, Permits and Licensing
- US Social Security Administration: Service Center
- United States Congress, Congressional Mail Screening
- United States State Department Amazon GovCloud
- DoD Business Transformation Agency:
Process, Systems and Information Flow Automation

PATENTS:

- 4,713,754 Content life cycle management system.
- 4,897,780 Enterprise Content Management and
electronic evidence credentialing
- 5,231,578 multi-media document annotation

Senior Technical Program Manager

Ægis Metrics, Inc. is a consulting company targeting Regulatory Compliance and Fraud Detection driven opportunities in Health Care, Corporate Governance and Pharmaceutical market segments. Client interviews, focused on business operations, Finance Forecasting, General and Administrative (G&A) have been the key to successful application of process optimization and technology achieving business objectives.

Health Care and Life Science practice:

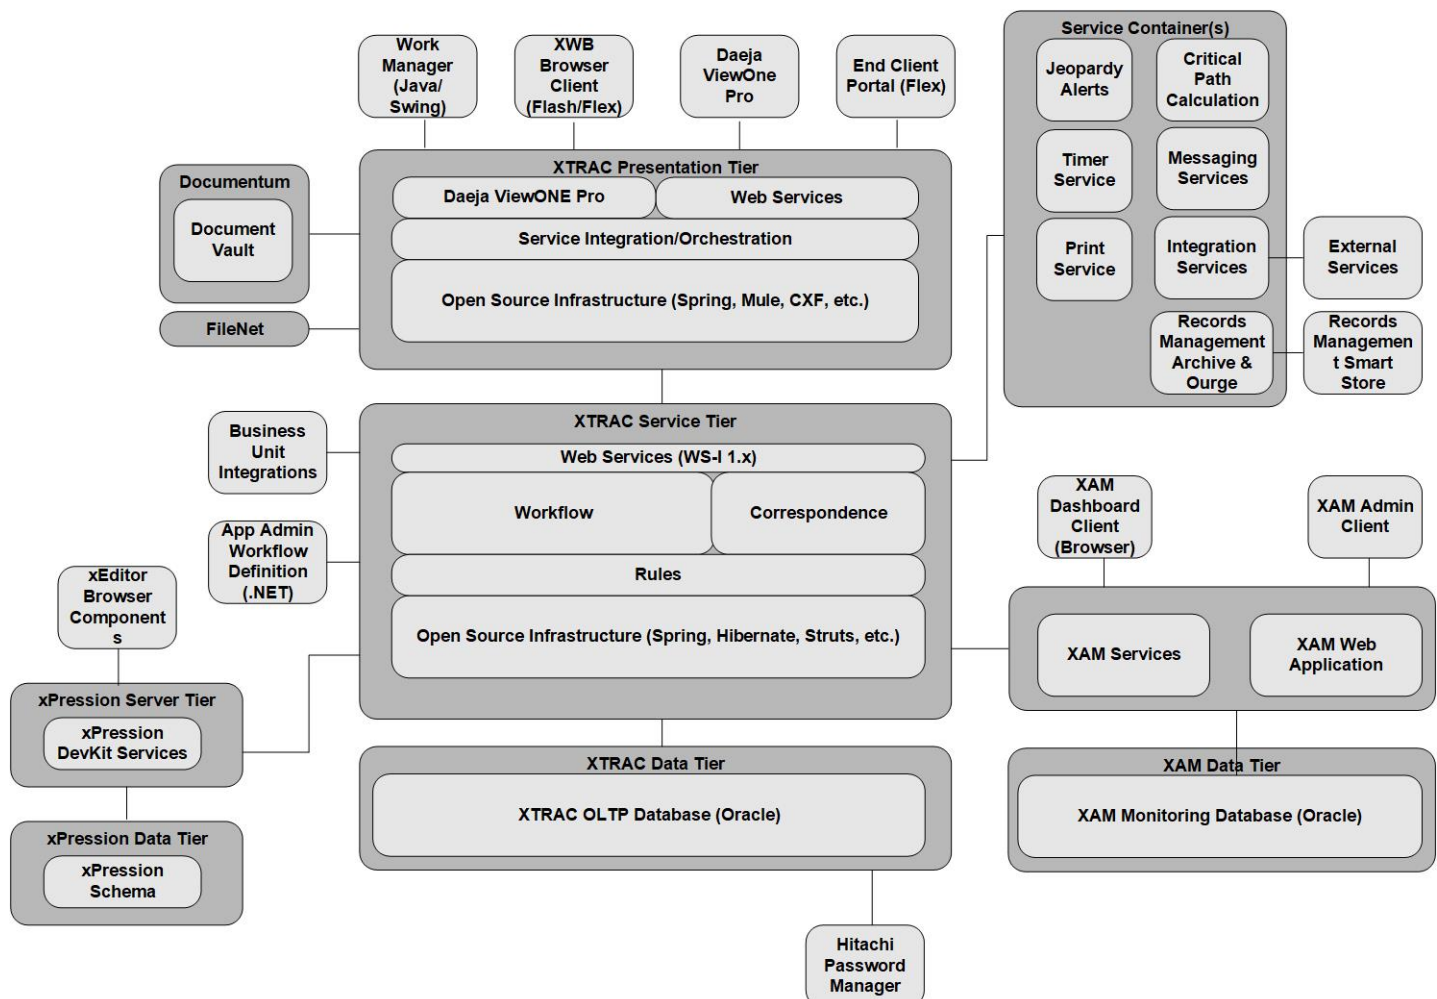

- Payers (Blue Cross, United Health, Aetna, Cigna),
- Providers (Partners, Tufts, Mass General...),
- Life Science (Johnson and Johnson, Novartis Decision Support, Sanofi-Genzyme clinical trials)
- Contribution to government standards (Health Information Technology).

Business Process Automation practice:

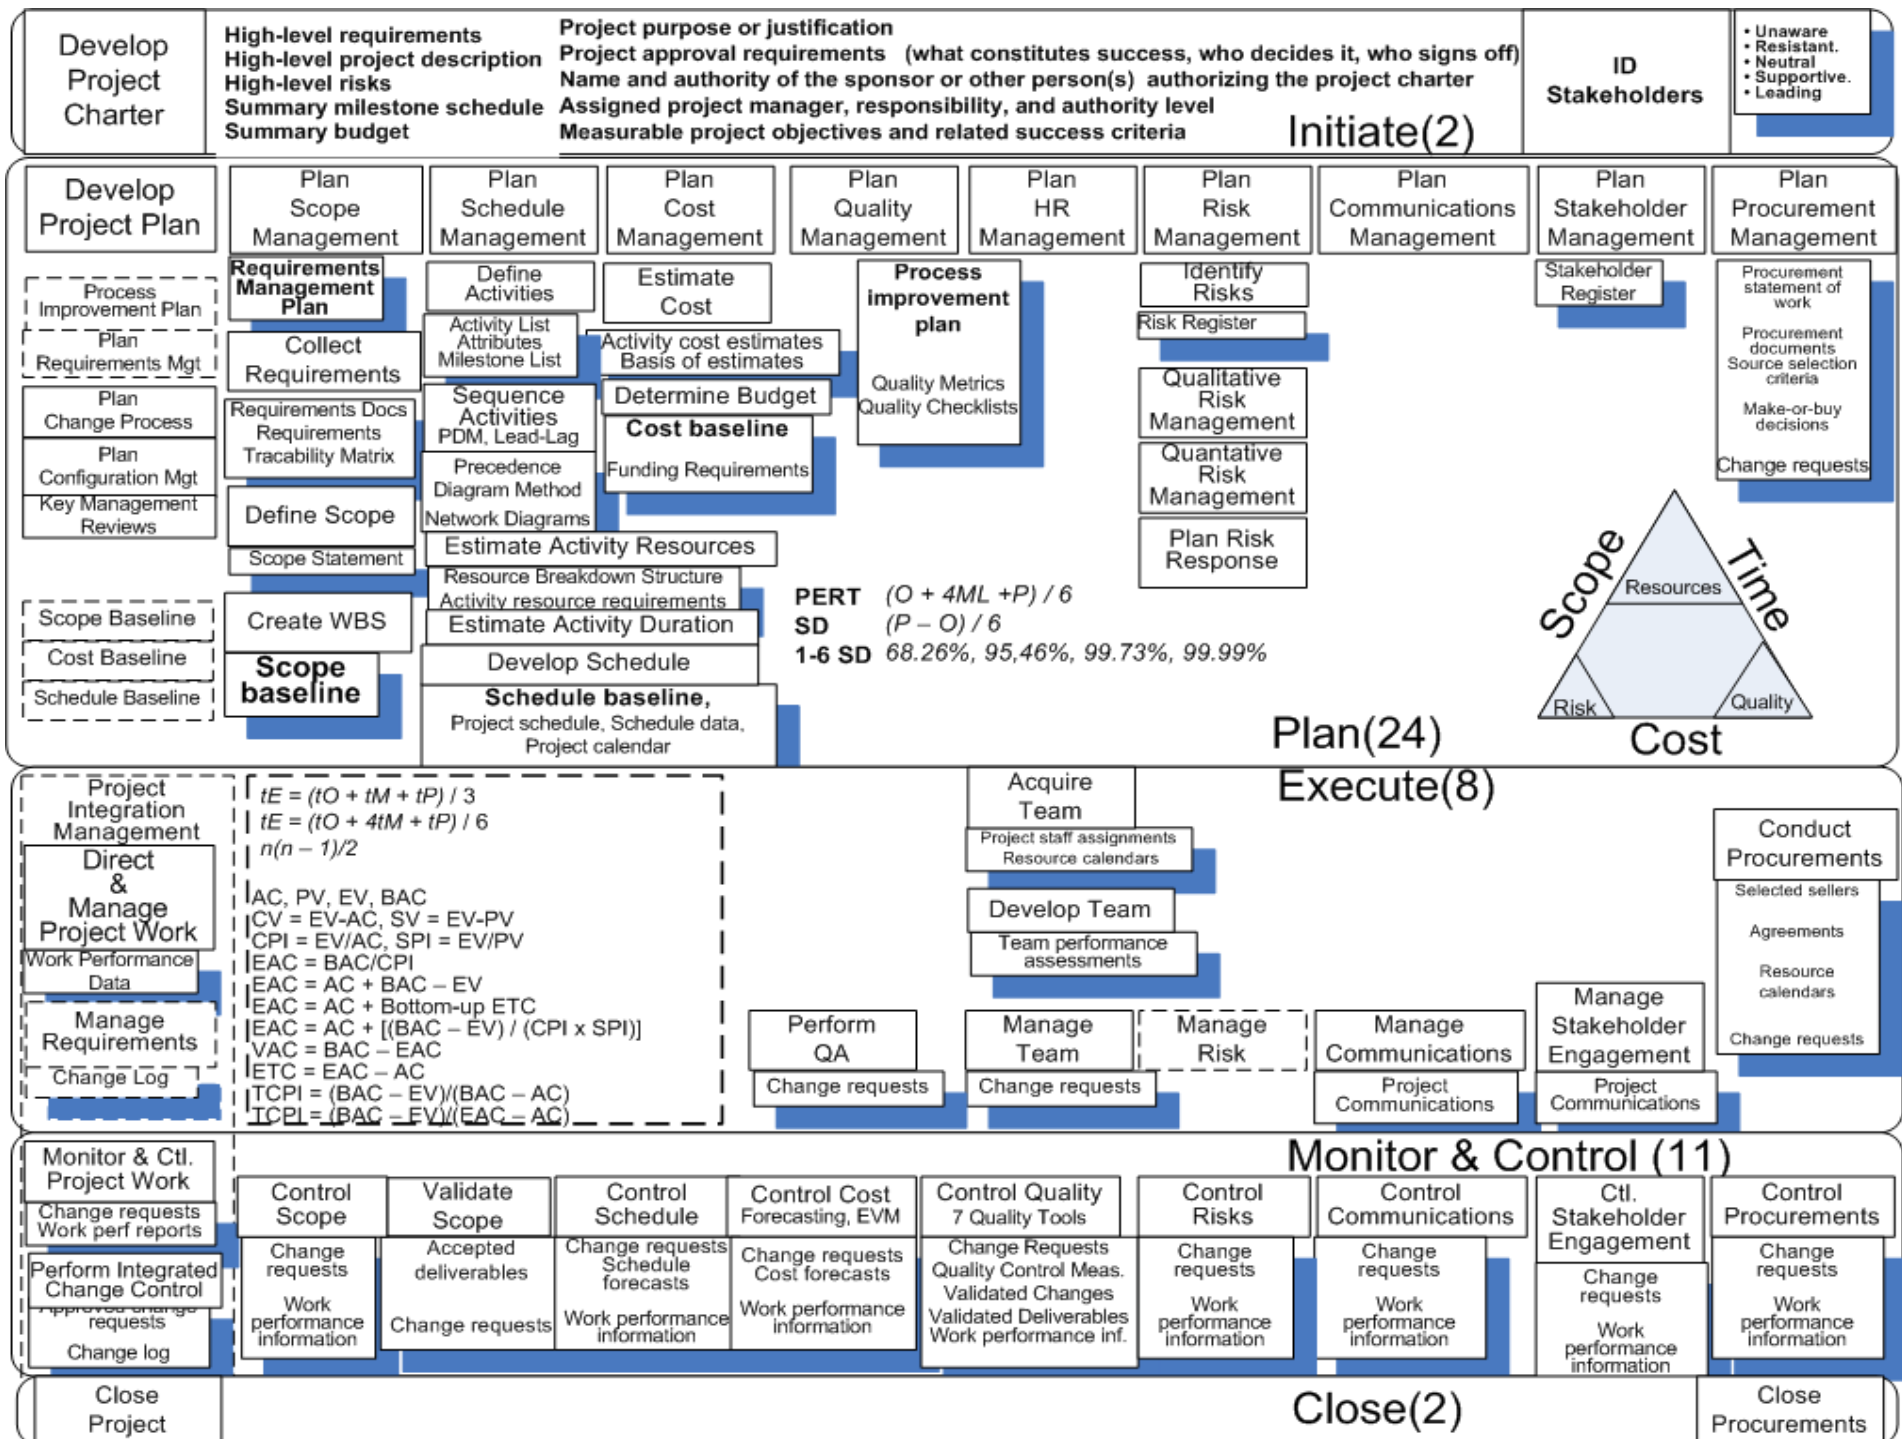

As is – To be process analysis diagrams, ***leveraging Visio graphic business process mapping***, form the requirements foundation for all engagements to understand a process from start to finish, a process flow chart can help you:

- ✓ Provide process documentation, compliance, and audit.
- ✓ View a visual project from beginning to end.
- ✓ Highlight complexities and redundancies, as well as potential problems and solutions.
- ✓ Reorganize processes into steps using an easy-to-understand system.
- ✓ Provide stakeholders a frame of reference to ask and answer more strategic questions and make informed decisions.

Types of process mapping: Detailed, Document, High-level, Swimlane / cross-functional, Value stream, Activity

Process Review-Implementation Methodology

City of Detroit**June 2015 – August 2019 Contract engagement****Buildings Safety Engineering & Environmental Department (BSEED)****Technical Program Manager/Business Analyst, Licensing, Permits & Land Records**

Governance and management of the project was my direct responsibility including Project Charter, kickoff meeting(s), scope management, risk management, communications, change control, performance measurement, and detailed plans/schedules for all phases of the project. Status meetings for senior leaders, assessing proposed changes in scope, and recommended courses of action to project sponsors during the execution phase were directly managed.

- This is a web hosted enterprise solution design and implementation serving all City of Detroit BSEED Divisions based on the Accela robust, cloud-based Software as a Service (SAAS) government software solution automating 250 distinct record types, Divisions individually served and integrated into the departmental system and reports:
Administration, Licenses & Permits, Plan Review, Construction, Property Maintenance, Zoning, Public Works, Environmental, Business License Boiler, Electrical, Elevator, Mechanical, Plumbing, Demolition.
- Project task scheduling and tracking: (Sample Client Configuration Validation Task list)

Client Configuration Validation	40 days	Fri 8/5	Mon 10/3	
<i>Business License Configuration Validation (176 Record Types)</i>	40 days	Fri 8/5	Mon 10/3	James Foster
<i>Environmental Affairs Configuration Validation</i>	25 days	Fri 8/5	Mon 9/12	LaReina Wheeler
<i>Code Enforcement Configuration Validation</i>	11 days	Fri 8/5	Mon 8/22	
<i>Property Registration</i>	11 days	Fri 8/5	Mon 8/22	Beatrice Norwood
<i>Dangerous Buildings Complaint</i>	11 days	Fri 8/5	Mon 8/22	Dilip Patel

Building a One-Stop System for Food Data

A Definitive Way To Profile Our Nutrients

Going Nuts Over Calories

- **Print-Cut publishing service** applied to the Secure Research Library hosting lab/program brochures and other information products that are intended for authorized use, printed in small quantities.

USDA-Agricultural Research Services (ARS)

Guidelines for Self-Published Brochures and Other Information Products

Summary of Editing and Production Process

- Manuscripts received are verified for all necessary components and clearances. If the submission is incomplete, missing items are requested. Manuscripts are not logged in for editing until submitted in its entirety.

Editing & revision

- The editor will review and revise manuscripts for clarity and style and will prepare it for publication. After author review, revision and submission, the editor will do the final editing, clear the manuscript with USDA's Office of Communications (a policy review), and prepare the manuscript for production.

Design & production

- Our design staff will do a preliminary review of artwork (photographs, charts, graphs, and drawings) during the initial editing, but major decisions about design and layout will come after final editing and clearance.
- When the designer begins formal work on your publication, he or she will review your manuscript with the editor for special needs. During design and production, the designer will consult with you as necessary. After making any needed changes, the designer will prepare the publication for printing.

Printing

- A printing specialist will arrange for and oversee printing. You will be responsible for obtaining complete funding for printing the publication. Unfortunately, we cannot reliably predict how much a job will cost, nor can we predict which fiscal year it will be produced, and we're not allowed to obligate funds for printing/production until the job is actually ready to go.

Distribution

- We will print the number of copies that you and the editor have agreed is suitable for your publication. These copies will all be sent to you for distribution. The editor will discuss this and other distribution matters with you at the time of the initial editing.

Sample Justification for Publishing

[date]

SUBJECT: Justification for publishing "Title of Publication"

TO: Director, Information Staff

THROUGH: Head, Editorial Unit, Information Products & Services Branch

FROM: [Author/Originator]

This is to request your approval to print or otherwise publish the subject publication,
which [describe publication's contents and purpose; be succinct].

The target audience for this publication is [describe audience].

This publication supports Agriculture Research Services Strategic Plan Goal(s) [specify goal(s)].

To meet the needs of this audience, we request that #,### copies be printed.

Wipro Technologies, Boston Massachusetts

Oct 2011-Aug 2013 Contract engagement.

Senior Technical Program Manager

Novartis Institute for Biomedical Research (NIBR) - Decision Support Environment (DSE)

Team workspaces integrated with SharePoint Content Management providing a single platform through which researchers access and analyze project data. Researchers and NIBR management share integrated information across research projects from drug discovery through Proof-of-Concept studies.

Fidelity Investments XTRAC

- Retained to direct transition of Fidelity Investments on-premise securities processing system to a Web-Hosted multi-tenant financial solution offering rich transaction process management and document of record recording to highly-regulated businesses - XTRAC® Solutions (www.xtracsolutions.com).
- The platform is a high volume, business critical, high availability online transaction processing (OLTP) and online analytical processing (OLAP) system based on Oracle technology. XTRAC processes more than 40 million work items annually and more than one billion documents are stored on the secure cloud platform used by XTRAC. More than 30,000 individuals in 75 companies, representing banks, brokers, investment managers and other financial institutions, use XTRAC to improve client experiences, grow their businesses with operational efficiency, and assist in maintaining compliance measures in a highly complex and demanding regulatory environment.
- The XTRAC Workflow Suite provides a proven solution to track, route and control work across your organization. Whether onboarding a new client, addressing a compliance audit or completing a financial report, each step in the process is standardized and streamlined.
- High level delivery milestones were rigidly defined and managed under a waterfall discipline with incremental subcomponents managed through an agile sprint/scrum discipline, thus the project lifecycle was Hybrid.

Fidelity Investments XTRAC deliverables:

- ✓ Project Charter High Level Requirements, Project Description, Milestones, Risks, Budget
- ✓ Portfolio road-map: Custodial Securities & Trade Records Management, New Account Opening & Account Management, Continuous Controls Monitoring
- ✓ Project & Staffing Plan Milestones, requirement deliverables definition, dependencies, schedule and staffing communicated both in a project plan document and a MS Project based GANT Chart
- ✓ Project Control Scrum master for daily sprints defined for incremental delivery of project components Microsoft Project integrated with reporting and analysis tools report actuals versus plan.
- ✓ Quality Management Defect Log documenting functional, performance and stress test results at milestone delivery meeting quality goals (MS Project Activity and Milestone dependency).
- ✓ Project Closure Defect Log resolution and department manager deliverable signoff

Kollabria, Inc., Rockland, MA

Jan 2011- Aug 2011

Contract Engagement, Senior Business Analyst/Consulting Partner

Direct research areas and related consulting projects addressing Software as a Service (SAAS), Collaborative Computing (SharePoint), Enterprise Content Management, Process Automation, & Distributed Capture.

- Author Digital Asset Management and Contract Lifecycle Management white papers providing **SharePoint 2010 Enterprise Metadata** design guidance on privacy, governance, monitoring and audit for corporate digital assets, from cradle to grave.
- Design a Secure Content Management Service based on the SharePoint 2010 platform for a fortune 100 client fully addressing FIPS 140-2 level 4 standards, strongly encrypting data to ensure privacy protection both in movement and storage

Laserfiche Document Management, Long Beach, CA

1/2006-12/2010 Contract Engagement:

Senior Program Manager: Enterprise Solutions

Established product packaging, licensing, and pricing strategies to address enterprise positioning at Federal

Agencies and Global 2000 corporations.

- Managed transition from a document technology platform product focused on small organizations, to an Enterprise Content Management focus serving medium and large organizations.
- Design Leadership for Laserfiche RIO product, based on the SharePoint 2007/2010 platform. This product established enterprise packaging, licensing, and pricing to serve Enterprise Content Management platform positioning.
 - **Microsoft SharePoint Server 2010 Federated search connector for Laserfiche** seamlessly searches both SharePoint and Laserfiche at the same time, or just search Laserfiche, from the SharePoint interface.
 - **Laserfiche Record Center for SharePoint** fully implements **Fast Search Server 2010 capabilities**

Advanced Content Processing	Extreme Scale Search Rich
Advanced Sorting	Web Indexing Similar Results
Contextual Search Deep	Thumbnails and Previews Tunable Relevance with
Refinement	Multiple Rank Profiles
Extensible Search Platform	
- Specified use of digital signatures and other cryptographic protections for digital evidence, establishing a basis for reliable chain-of-custody authentication of documents.
- VMWare's high availability module is leveraged to configure Laserfiche High Availability services in a multi-node configuration such that any of the virtualized services fail over to any of the remaining nodes.
- Marketing and product programs managed utilizing Agile Scrum methodologies.
Ameriprise Financial Services and Lending Tree Loan Origination Service serve internet based customers across the USA based on this system

DoD -Crane Naval Surface Warfare Center: Ruggedized Logistics Process Automation Under exacting new requirements specified by the Pentagon's NMCI (Navy Marine Corps Intranet), all legacy technology applications in military installations are certified to assure they function well in simulated "real world" conditions.

DoD Business Transformation Agency: Process, Systems and Information Flow Automation In response to the National Defense Authorization Act of 2005, DoD established the Business Transformation Agency (BTA), tasked with modernizing processes, systems and information flows.

Business operations at six defense agencies have been impacted: the departments of the Army, Navy and Air Force; the defense logistics agency; defense finance and accounting service; and transportation command.

Two of DoD's strategic objectives for business transformation include reducing the cost of business operations and improving financial stewardship are achieved through Business Process Management technology applied to create an electronic workplace providing both the operational metrics and transparency to fully address DoD business transformation. The redesigned Defense Travel System (DTS) reduced the processing cost of travel vouchers \$56 million annually.

Global 360 (Merger Eastman Software, Inc., Kofax Software) Dallas, TX 11/2001 to 1/2006

President / Chief Operating Officer/ Business Analyst/Program Manager:

Internet Facing Product Line, Global 360 Enterprise Business Process Management (BPM) Suite

The Global 360 Enterprise BPM Suite is a comprehensive solution whose capabilities and features combine business process modeling, simulation and execution with automated monitoring and analysis, thus supporting the entire BPM lifecycle. Global 360 implementations are concentrated in the traditional workflow strongholds - financial services, insurance, and government.

BPM Engine

The Global 360 BPM Suite is comprised of key service layers that can be deployed independently or in conjunction with each other. For example, companies could utilize an existing content management solution in place of Global 360's native capabilities. Additionally, the Optimization layer can also be deployed stand-alone or extended across multiple process and transaction engines to provide end-to-end process visibility.

Optimize 360 - Optimization Services layer provides simulation, analytics and KPI/performance management, enabling both design-time and runtime business process optimization. The Optimization Services layer is capable of optimizing processes that span multiple process execution systems, including BPM systems other than Global 360, thus providing an overall view of process performance.

Execute 360 – Content, workflow, and process management capabilities that integrate with your existing data processing systems. Execute360 provides an end-to-end document lifecycle management solution for the capture, process management, and storage of information assets.

Process 360 - Process Execution Services layer is the heart of the suite, managing both straight through and long running business processes, as well as the human interaction with the process and system/service integration. Content Management Services layer is capable of spanning multiple Enterprise Content Management (ECM) services, including ECM systems other than Global 360 such as:

- Global 360 Business Process Management
- IBM/FileNet Process Management
- Documentum Process Service

Content 360 – Business Process Associated Content Services manage the storage, retrieval and manipulation of content associated with the business process. Key capabilities of this service include document capture, versioning, archival and search. Content Management Services layer is capable of spanning multiple Enterprise Content Management (ECM) services, including ECM systems other than Global 360 such as:

- Global 360 Enterprise Content Management
- IBM/FileNet Content Manager
- EMC Centera content addressed storage (CAS)
- Documentum Content Service

Eastman Software, Inc., Billerica, MA

11/1999 to 11/2001

CTO Program Manager / Business Analyst: Internet Facing Product Line

A wholly owned subsidiary of Eastman Kodak delivering products to market through indirect channels of distribution in 160 different countries. Three development locations managed in two geographies. Brought on board and specifically tasked with developing a product strategy, which would serve as a vehicle to align corporate resources with the most highly performing assets resulting in a return to financial success.

After an installed base review, it became apparent that the strength of the company resided in a sizable fortune 100 corporation and major government institution customer base. A fast track customer initiative was undertaken involving 32 fortune 100 CIO's, revealing significant customer demand for Eastman to address:

- 1) cost of ownership issues,
- 2) scalability/integrity,
- 3) internet/intranet communications,
- 4) transaction management/integrity

Leadership for an “n-tier” Service Oriented Architecture product line providing Business-to-Business transaction management, serving as a platform for, service bureau business, supply chain management, and Business-to-Business process management.

- Enhancements to the existing Business Process Management core product line responding to cost of ownership, scalability, integrity, a component of the communications requirement
- A new product initiative, maintaining backwards compatibility while addressing the balance of the communications agenda, the multi-platform (J2EE) requirement, and absolute transaction integrity for Business-to-Business transactions across internetworking communications.
- Aligned product and service strategy with strong market presence in financial services and government markets worldwide. Substantial opportunities developed through enhanced transaction integrity / throughput capability and multi-platform initiatives for the Business Process Management and High Availability Storage product lines.
- Established a corporate customer service focus, solidifying account relationships with the fortune-100 installed base. Created a unique service product offering (“eiStream Investment Protection Program”) addressing ongoing enterprise requirements for maintenance, project assistance, diagnostics, training and related services.
- Design and development of an “n-tier” multi-platform product strategy, based on a Service Oriented Architecture:

Platforms: Sun Solaris, IBM AIX, IBM iSeries, Microsoft Windows, Linux

Application Server Technologies: EJB, JDBC, JSP, Servlets, Struts Framework.

Application Servers: BEA WebLogic, WebSphere or JBOSS.

Web Pages implemented using: HTML, Dynamic HTML, JavaScript, JavaServer Pages, Cascading style sheets (CSS), eXtensible Markup Language (XML) and Extensible Stylesheet Language (XSLT)

Program Manager Web Services

Johnson and Johnson Electronic Clinical Trial Registry, an information technology platform developed to automate data management in clinical trials. The approach, available for industry-use, is designed to replace the paper-based conventional processes of managing clinical supplies and tracking patient health data with a cohesive suite of digital technologies.

Johnson & Johnson operating companies sponsor and support clinical trials in more than 40 countries, allowing for wide diversity among populations participating in research. Systematic compliance and audit capabilities are incorporated in the platform to apply principles of Good Participatory Practice Guidelines related to clinical trials.

Bank of New York custodial securities and stock trade records management

In the shadow of New York World Trade Center, continued external operations through the disaster and thereafter, with complete information protection, despite data center destruction, based on high availability off-site content mirroring and fail-over features.

Transamerica Financial Advisors: Brokerage and Advisor Process Automation

Provides investments and financial planning to clients nationwide through a network of more than 700 registered representatives, 42 offices of supervisory jurisdiction (OSJ) branches and 51 home office staff, TFA is a rapidly growing enterprise whose independent representatives faced the growing cost of paper-based processes: misplaced documents, time-consuming costs and file storage expenses.

AFLAC Customer Service Correspondence Tracking, AFLAC insures more than 40 million people worldwide and is the leading underwriter of supplemental insurance in the United States. AFLAC receives approximately 60,000 to 70,000 customer requests each month in the form of paper, faxes, email, or via the internet. Eastman Software's Enterprise web-enabled workflow system automatically routes all work requests received via the web site to the correct Correspondence Specialists based on a user-specific Skill Based Routing database.

Management and Correspondence Specialists have the ability to track a document from introduction to archival. The manager has access to the entire file and can either approve, de-escalate or disapprove the file with further instructions on an online 'sticky note'.

ABN Amro Loan Origination Service

A hosted mortgage service to commercial banks across the USA based on this system

US Social Security Administration Program Service Center Automation:

Automates front office transactional transparency across a nationwide network connecting local community offices to SSA Woodlawn, Maryland Headquarters based on this system.

Lexign (icomXpress / Keyfile Corporation), Nashua, NH

4/96 to 11/99

VP Engineering / Program Manager: Enterprise Product Line

A venture backed startup providing mission critical e-commerce solutions. Systems typically serve revenue critical B-to-B functions in financial (credit approval, secondary), or cross industry (order processing, contracts management...) applications.

Product development and planning responsibility for document processing and workflow products.

- 8 major functional product releases of over four years, resulting in 100% increase in maintenance revenue and a turnaround in new account penetration
- Sustaining engineering focused on the Document management product produced measurable results within 6 months by instituting a 4-pronged approach:
 - Refocus quality assurance on scalability.
 - Skills development:
 - Product lifecycle management:
 - Cycle time reduction

Imagery Software Inc. (an Eastman Kodak company), Bedford, MA

5/91 to 3/96

Senior Program Manager / Product Architect

- As a member of the founding management team, charged with developing business strategies, product concepts, and strategic partnerships. Developed a two-tier channel strategy based on partner marketing strategies, utilizing OEM technology licensing agreements, with major independent software vendors (ISVs) to directly recruit their resellers and distributors.
- Directly drove architecture, managed development schedules and developed operating budgets for all committed deliverables. Nurtured an object product development and design strategy (C++ code base) producing a product set which scales from single user to a fully distributed model. Rational Software early adopter.

Products delivered:

- | | |
|-------------------------------------|--|
| • Imagery GroupStore HSM | Hierarchical Storage Management system |
| • Imagery GroupStore DMS | Image Document Management system |
| • Kodak Image Display System | Image processing and display software |
| • Lotus Notes Document Imaging v2.0 | image management suite |
| • Novell Mass Storage Service | hierarchical storage management |

Wang Laboratories, Lowell, MA

3/83 to 5/91

Director/Business Analyst, OPEN Systems Image Programs

Responsibility for development and product direction for all "open systems" based image systems, an independent business unit within the corporation was employed. Within a short time, the following accomplishments were achieved:

- Development of a concise cohesive product strategy across heterogeneous architecture (Mainframe, Unix, NetWare).
- Successful completion of the first goal after nine months resulted in launching "OPEN/image-Windows".
- Organizational design resulting in an overall staff reduction of 40% without sacrificing commitments

Duties and responsibilities:

- Concept definition, project "sell" to top management, project plan, cost projection, team recruitment, facility plan, and capital equipment acquisition.
- Development of third-party joint ventures and OEM agreements.
- Responsible for both the initial executive level "sell" and technical execution.
- Directly involved in Major Business Opportunity presentations at the executive level, selling concept as well as qualifying technical feasibility.
- Responsible for development of product direction, support and education strategies, staffing and deliverables.
- Responsible for program management and coordination with marketing, manufacturing, sales, and support organizations. The organization directly supported all home office marketing communications activities, shows, support and education materials development

Prudential Financial: Customer Transaction Processing (1M transactions per day)

Daily volume of over one million customer transactions is received through a "common front door" mandating a high-volume transaction processing customer service application and infinitely scalable long-term archival capacity.
