Relevant Work Experience

Avanade (Minneapolis, MN) — Senior Consultant, Data Engineering

06/2018 ~ 08/2023

Data Engineering Roles

Avanade - Data Engineering Bootcamp Co-creator

Relevant technologies: Azure Databricks, Azure Data Factory, Azure Data Lake Storage Gen 2, PySpark, Python

Created Data Engineering Bootcamp to educate and train new and transferring resources to enable them to become project ready. Concurrent with project work.

Global Insurance Broker - Data Engineer, CI/CD Developer, Databricks Developer

Relevant Technologies: ADLS Gen 2, Azure Data Factory, Azure Data Factory, Azure Databricks, Azure DevOps, Azure SQL Server

Created SQL-Server Stored Procedures for Master Data Management ingestion process. Created new-to-organization CI/CD process enabling automated environment promotion of Profisee MDM configuration and other infrastructure supporting Profisee MDM. Refactored legacy python NLP cosine similarity string matching job to run on Azure Databricks and Pyspark, taking computation time from hours to minutes. Informally led and directed other team members on Databricks development. Supported other various initiatives including Azure Function development.

Global Software Development and Cloud Computing Company – Data Engineer

Relevant Technologies: Visual Studio Code, GIT, Azure Data Factory, Azure Data Bricks, Azure Synapse Analytics, Python, Azure DevOps

Pioneered modular Azure Data Factory, and eventually migrated to Azure Synapse Analytics, orchestration approach rationalizing 100s of pipelines to 10s of pipelines in a tested framework, with operationalized CI/CD.

Global Pharmacy Retailer – Data Engineer

Relevant Technologies: Visual Studio Code, GIT, Snowflake, Azure Data Factory, Azure Data Bricks

Analyzed requirements for lift-and-shift Teradata to Snowflake migration, creating Azure Data Factory pipelines and Azure Databricks code to replace legacy Ab Initio and Datastage jobs as well as SnowSQL scripts to replace Teradata SQL scripts.

Global Health Insurance Firm - Data Engineer, Tech Lead

Relevant Technologies/Topics: Snowflake, CosmosDB, FHIR Data Model

Created SnowSQL scripts for constructing CosmosDB compatible data forms in support of transactional workloads. Assisted Scrum leadership in requirements definition and team management.

Global Chemical Manufacturer - Data Engineering Design Assistant

Relevant Technologies: Excel, ADLS Gen 2, Powerpoint

Assisted design phase architecture of new to organization *data mesh* architecture by aligning business structures and ADLS Gen 2 structures as well as Microsoft Purview structures.

Skills

Data Engineering

Azure Data Stack

Power BI

ETL

Spark/Databricks

Python

SQL

Certifications

HbX – CoRe

Michigan State University – Master’s
Certificate Supply Chain Management

Azure Data Fundamentals

Power Platform Fundamentals

Languages

English

Japanese (Con conversationally fluent)

Power BI Roles

Global Chemical Manufacturer - Power BI Developer

Relevant Technologies – Power BI

Developed a widely consumed Travel Expense reporting dashboard. Supported other initiatives like executive reporting, Celonis task mining testing, and Zycus strategic sourcing.

Global Consumer Goods Manufacturer – Power BI Developer

Relevant Technologies – Power BI, Azure, Azure Analysis Services

Developed Azure Analysis Services backed Power BI reporting solutions for global sales reporting, managing offshore resources and serving with a large team coordinating efforts across Azure Data Lake, Azure Data Factory, Azure Analysis Services, and Azure DevOps activities.

Global Life Science Firm – Power BI Embedded Development Lead

Relevant Technologies – Power BI Embedded

Oversaw creation of in-house to Eversana Power BI Embedded API service to render Power BI reports in internal web page applications using new “Business Owns Data” authorization model. Oversaw creation of the final report used in that embedding.. Completed project one week ahead of schedule with feedback along the lines of “I’ve never had a project go so smoothly”.

Global Building Technology Manufacturer – Power BI Embedded Developer

Relevant Technologies: ASP.NET, ASP.NET Core, Power BI, Visual Studio, Visual Studio Code, Salesforce Canvas

Minted “Business Owns Data ” authorization model that allowed passing of parameters from VisualForce in Salesforce to an API service that exposed the organization's Power BI tenant to Salesforce and rendering of a Power BI report in a Salesforce embedded Web Page. Delivered with a team member both a .Net and .Net Core version of the application, with unit tests and a Swagger interface.

Global Pharmaceutical Company – Power BI Developer

Relevant Technologies: Power BI

Migrated a Power BI report necessary for managing an M365 migration project from old to new data sources and from old to new branding colors.

Polaris Industries (Bloomington, MN) — Business Intelligence Systems Analyst

09/2017 ~ 03/2018

Created ETL workflows using Alteryx and Power BI reports with those outputs to support various cross-functional teams in both Agile and Waterfall project environments.

Quality Park Products (Lauderdale, MN) — Supply Chain Analyst

04/2015 ~ 09/2017

Created new-to-group data mart infrastructure to support various reporting needs of the supply chain group using custom SQL Server infrastructure and JupyterHub Python-based reporting infrastructure. Also assisted the VP of Logistics with analysis.

Education

Metro State University (Saint Paul, MN) — *Masters*

2017 ~ 2021

Management Information Systems

Crown College (Saint Bonifacious, MN) — *Bachelors*

2006 ~ 2010

Biology, Summa Cum Laude
