ayinoluwa@gmail.com | 416-303-1198 <https://github.com/kayodeao>

PROFILE

Strategic cybersecurity, product and application security specialist with over 15+ years of experience driving technology transformation, governance, and compliance across large enterprises, advising institutions on secure AI adoption, data governance, and regulatory compliance, with several multi-million-dollar projects delivered. Expert in conducting AI maturity assessments, defining data vision, and implementing roadmaps that align with operational constraints and institution-wide long-term transformation goals. Proven success integrating Microsoft CoPilot and OpenAI ChatGPT into secure enterprise workflows while upholding privacy, ethics, and stakeholder inclusion.

HIGHLIGHT OF EXPERTISE

Product	Cyber Security	CONSULTING	RISK MANAGEMENT
Product Roadmap	Cyber Threat Intelligence	AI Strategy	Enterprise Risk Management
Product Security Architecture	API Security	Data Governance	Digital Risk Management
Cloud Analytics	Infrastructure Security	AI Adoption	Technology Risk
Stakeholder Management	Application Security	Enterprise Architecture	Data Privacy

PROFESSIONAL EXPERIENCE & ACHIEVEMENTS

Product Security Specialist, [Ada AI](#)

Apr 2022 – Present

Ada is an artificial intelligence platform that powers customer experience for leading financial services clients like Neo Financial, Brigit, Square, Afterpay, Blackhawk Network, Wealthsimple, Qapital, LiteBit, and Luno

- **Enterprise AI Security Strategy:** Designed and executed an enterprise-wide AI strategy in alignment with security frameworks (MITRE ATLAS, MITRE EMB3D, NIST), incorporating ethical risk frameworks and stakeholder engagement models to ensure responsible and resilient AI adoption
- **AI Risk & Maturity Assessments:** Conducted comprehensive AI risk and maturity assessments across multiple AI platforms, including ChatGPT and Microsoft Copilot integrations, identifying vulnerabilities in generative AI models and implementing governance overlays to mitigate risks and safeguard data privacy
- **Vulnerability Management:** Proactively identified and remediated responsible AI vulnerabilities within large-scale AI systems, partnering with ML engineers, researchers, and security experts to integrate governance into secure design reviews, threat modeling, and incident simulations
- **Endpoint Security:** Deployed endpoint security solutions, including EDRs, patch and vulnerability management agents, to ensure secure workstations while enabling detection of and response to potential cyber-attacks
- **Security Design:** Review and approve solution designs in the Engineering Design Forum, ensuring conformance with applicable security requirements and standards
- **Threat Modelling:** Implemented & managed a threat modelling process for all new and existing features, resulting in consistent identification & remediation of security risks across the SDLC, improving the security posture of the product.
- **Security Assessments:** Leading security testing efforts, including penetration testing, vulnerability scanning, and security code reviews, to identify and mitigate security risks across the application lifecycle
- **Incident Response:** Participating in security and operational incident response activities affecting the product and infrastructure
- **Cyber Security Program Management:** Led the development and implementation of information security policies, procedures, and standards, resulting in achieving HIPAA, CCPA, and SOC 2 compliance certifications driven by the organization's security strategy
- **Cloud & SaaS Security Posture Management (CSPM):** Leading collaboration between cloud and security engineering teams to ensure secure and compliant GCP and SaaS workloads, including Kubernetes clusters
- **Applied AI/ML for Cyber Insights:** Leveraged advanced AI/ML techniques to address cyber domain challenges and generate actionable insights for events of interest
- **Multi-Modal AI Security:** Securely leveraged multi-modal AI to enhance user interaction and decision-making, ensuring safe distribution and processing of images, text, audio, and tabular data
- **Security Tooling:** Developed custom scripts and tools to automate application security processes, improving efficiency and reducing manual effort in areas like vulnerability assessment, security testing, and incident response

- **API Security:** Drove implementation of API security controls for Ada's customer experience products, assessing integrations against OWASP Top 10 vulnerabilities and securing conversational AI APIs and machine learning endpoints.
- **AI Governance & Peer Review:** Established peer-review processes for AI governance assessments to ensure accuracy and completeness prior to distribution.

Director, Product & Information Security, [RBC](#)

Jan 2018 – Apr 2022

RBC helps people borrow, save & manage money easily via a suite of products within its mobile and internet banking apps

- **Cyber Risk Assessment & Quantification:** Led comprehensive cyber risk assessments and risk quantification for RBC's largest International Applications Development group, overseeing a \$300MM portfolio across nine countries and six operating centers (United States, Canada, Australia, United Kingdom, Switzerland, and Malaysia).
- **AI-Driven Fraud & Threat Detection:** Directed the development and deployment of AI-driven anomaly detection models to enhance fraud prevention and cyber defense, ensuring adherence to governance controls and regulatory requirements.
- **Cyber Analytics Platform Delivery:** Led delivery of RBC's cyber analytics platform, developing advanced data models for threat hunting and threat intelligence, reducing mean time to respond (MTTR).
- **Team Leadership & Threat Detection:** Managed a team of 20 data scientists and engineers to deliver AI products that detect advanced persistent threats in cyber, fraud, and anti-money laundering domains using lean-agile (Scaled Agile Framework) practices.
- **Secure Analytics Migration & Compliance Tools:** Directed implementation planning for interactive data analytics and data processing tools in compliance-sensitive environments, leading migration from on-premises to cloud-based solutions.
- **Real-Time Privileged Access Monitoring:** Established analytics automation for real-time monitoring of privileged access, fraud prevention, and global vulnerability management, supporting the cyber security strategy.
- **Control Assurance & Validation:** Applied analytics to business and technology controls for effectiveness validation, providing data-driven insights to inform enhanced control inclusion.
- **Security Architecture Review:** Reviewed security architecture, design, and delivery for the cyber analytics platform, ensuring robust protection against evolving threats.
- **Client Consent Data Model:** Deployed a centralized client consent data model for micro-segmentation on digital platforms, enhancing client targeting and experience while respecting privacy preferences.
- **API Security & Modernization:** Led secure product development of business domain APIs (microservices, SOAP, REST/JSON) to enable robust system interactions, supporting complex business functions and improving code reuse.
- **Cost-Saving Solutions:** Developed and implemented technology solutions that achieved over \$2 million in development cost savings and promoted code reuse across the organization.

Head, Product and Infrastructure Security, [Standard Bank](#)

Jan 2015 – Jul 2017

Standard Bank serves retail and commercial customers covering all life stages and business needs through its various offerings

- **Cybersecurity Framework Management:** Built IT Risk Governance and Digital Risk Management frameworks leveraging analytics, ML, and data governance for proactive risk oversight.
- **Security Standards:** Implemented ISO 27001, ISO 22301, ISO 20000, COBIT 5, and PCI DSS standards across 10+ countries.
- **Threat Detection:** Led fraud and threat detection initiatives in a Joint Security Operations Centre (JSOC) using Intellinx, Imperva, and IBM QRadar.
- **Operational Risk:** Executed proportional information risk treatment programs aligned to business risk appetite.
- **Business Continuity:** Provided governance across business units, ensuring risk management integration into operations and resilience planning.

Senior Consultant, Risk Advisory, [Deloitte](#)

Sep 2011 – Jan 2015

Deloitte is a professional services firm providing security consulting, financial audit, tax, and advisory services.

- **Secure Cloud Transformation Advisory:** Guided clients through secure cloud migrations by providing best practices for transitioning, including the development of technical standards and cloud roadmaps.
- **Penetration Testing:** Conducted vulnerability assessments & penetration testing exercises for clients across financial institutions and maintained a 100% breach rate on networks, mobile, and web applications.
- **Digital Forensics & eDiscovery:** Led the digital forensics, eDiscovery, and incident response team to conduct in-depth digital investigations across diverse platforms (networks, cloud, email, PCs, and storage)
- **Incident Response & Compromise Assessments:** Assessed client's readiness to respond to incidents; developed incident response playbooks; conducted incident response tabletop exercises; and performed compromise assessments to determine breach status of organizations.

- **Cyber Security Program Management:** Designed robust security programs for financial institutions, encompassing procedures, standards, and policies.
- **Vulnerability Management:** Established vulnerability management programs for clients ensuring comprehensive asset coverage with risk-based prioritization and remediation processes.
- **Threat Modelling:** Performed threat modelling of infrastructure designs for clients, proactively identifying risks and threats.
- **DevSecOps:** Supported clients with deploying secure configurations of CI/CD pipelines, ensuring appropriate IAM permissions and embedding security capabilities across pipelines.

NOTABLE SECURITY & RISK PROJECTS

- Over \$3.5MM in cost avoidance enabled due to increased agility by enforcing reuse at design time and drive standardization
- Integration with Weights and Biases to deliver multi-modal AI strategy for AI experiment tracking and data lineage
- Implemented outlier detection models (role mining) on Joint Security Operations Centre cyber analytics platform that assesses the address and risk of users, entitlements, and user-entitlement pairs. In turn this allows IAM to reach out to managers and app owners, flag such items, reduce the number of line items to review, as well as reduce any unnecessary cyber risks
- Increased agility in speed of ingesting data and having data made available in near real-time (1TB in 5 minutes vs. 3+ days)
- Evaluated AI maturity AI Risk reviews for several use-cases to support rollout of Artificial Intelligence (AI) models, improve enterprise security and controls across multiple AI platforms – Google Vertex AI, Temporal, Posit, Retool, dbt & Rewind
- Detection and remediation of misconfigurations, vulnerability assessments for container images, review of manifest files
- Security architecture review for integration with OpenAI integration of generative artificial intelligence models
- Spearheaded the design and development of a ubiquity platform for enterprise query, enabling secure, organization-wide access to knowledge across documents, databases, and systems via natural language and API-based interactions. Unified data access, multi-modal AI reasoning, orchestration, and governance through a layered stack of AI tools

SPECIALIZED TRAINING & CERTIFICATIONS

Certified Information Systems Auditor (CISA)	2009
Certified Fraud Examiner (CFE)	2010
Strategic Thinking – Harvard Business School	2012
COBIT 5 Lead Implementer (COBIT 5 LI)	2015
Certified Operational Risk Manager (ORM)	2016
Data IKU	2018
Teradata Vantage Analytics	2019
IBM Infosphere MDM Physical Module Algorithms	2020
Certified Scrum Product Owner (CSPO)	2021

EDUCATION

Master of Management, Innovation and Entrepreneurship Queen's University
Bachelor of Computer Science, Covenant University

COMPETENCIES

DevSecOps: DataDog, Checkmarx, Snyk, Aqua Trivy, Checkov, Falco, Azure DevOps, Jenkins, CircleCI, GitHub Actions

Scripting: Python, Bash, SQL.

Vulnerability Management & CSPM: Qualys, Tenable, HackerOne, Rapid 7, Prisma Cloud, HackerOne, BugCrowd. Ms Defender for Cloud, Wiz, Adaptive Shield.

AI Security: Google Vertex AI, Anthropic Claude, Microsoft Copilot, OpenAI GPT, Gemini, Azure AI & Data Catalog, Weights & Biases (W&B), Prompt Engineering, AI Model Risk Assessment, Responsible AI Governance, AI Security Testing

Malware Analysis & DFIR: CrowdStrike, SIFT, Volatility, EnCase, Magnet Axiom, Tines, KAPE, DarkTrace, FTK, Autopsy, Burp Suite, Carbon Black, Cuckoo Sandbox, CFF explorer, PE Studio, Ghidra.

Compliance: ISO 27001/2, NIST, GDPR, PCI DSS, SOC 2, HIPAA, EU AI ACT, CCPA, GDPR, PIPEDA
