SUMMARY

Dedicated Cybersecurity Analyst with expertise in integrating security and compliance frameworks such as SOC 2, ISO 27001, and NIST into product lifecycles. Skilled in conducting real-time risk assessments, remediating compliance gaps, and leading audits. Proficient in database security, network troubleshooting, and policy drafting, with a proven ability to streamline processes, enhance data security, and improve operational efficiency.

SKILLS

- | | | |
|-------------------------|-------------------|-----------------|
| • Information Security | • Windows / MacOS | • IAM |
| • Compliance & Security | • Python | • GRC |
| • Policy Drafting | • SQL Server | • NIST CSF, RMF |
| • Database Management | • OKTA | • Cloud Azure |
| • Technical Support | • Power BI | • ISO 27001 |

EDUCATION & CERTIFICATIONS

- | | |
|--|--------------------|
| • Cybersecurity Internship – Symposia | Feb 2024- Mar 2025 |
| • Associate of Science in Information Technology – Interactive College of Technology | Aug 2022- Jun 2024 |
| • Certificate of CompTIA A+ & CompTIA Network+ | |
| • CompTIA Security+ – In Progress | |

PROFESSIONAL EXPERIENCE

Network Services · ADT Security Feb 2024 - Present

Design and implement efficient network solutions, enhance database security, and improve data flow and availability, significantly boosting network performance and reliability. Lead cross-team upgrades, develop detailed documentation, and strengthen security measures through robust protocols and regular system reviews, reducing the risk of data breaches.

Key Achievements:

Database Security and Integrity:

- Initiate regular system reviews and backup/recovery protocols to enhance database security and reduce data breaches.

Network Security and Troubleshooting:

- Resolve complex network issues, create documentation for network troubleshooting, and improve network uptime.

Network Upgrades and Maintenance:

- Coordinate cross-team upgrades and updates to network databases to improve data flow and availability.

Network Solutions Design:

- Design and implement network solutions aligned with agency needs to improve network efficiency.

IT Specialist · Tego Systems March 2023 - Feb 2024

Developed and implemented tailored IT solutions using Microsoft Access, Power BI, and SQL Server to optimize operations, enhance data security, and significantly boost team productivity, while providing expert user support and streamlining interdepartmental data sharing.

Key Achievements:

Ensured Database Integrity and Security:

- Conducted thorough reviews, implemented backup and recovery protocols, and adhered to industry standards to reduce data vulnerabilities.

Collaborated with Cross-Functional Teams:

- Supported system updates that improved data accessibility and interdepartmental data-sharing efficiency.

Maintained Technical Documentation:

- Authored and maintained Data Dictionaries to provide clear guidance on data resources, aiding in efficient troubleshooting.

Computer Technician · CSAT Solutions

May 2020 - March 2023

Experienced in developing and maintaining data management protocols with tools like Access and SQL Server, ensuring system reliability and uptime while enhancing database security through best practices. Proven ability to streamline processes, improve onboarding efficiency, and deliver exceptional user support, addressing and resolving the vast majority of issues on first contact.

Key Achievements:

Data Management:

- Developed and maintained protocols using tools like Access and SQL Server to ensure system reliability and uptime.

Database Security:

- Supported database integrity by implementing backup/recovery best practices and updating security controls.

Technical Documentation:

- Created and organized documentation to streamline troubleshooting and onboarding processes.

User Support:

- Provided effective user assistance, optimized system performance, and resolved issues efficiently.

PROJECT

- Designed and implemented a small office network infrastructure, including setting up routers, switches, and access points.
- Configured DHCP and DNS services to ensure seamless network connectivity.
- Implemented security measures such as firewall rules and VPN configurations to enhance network protection.
- Conducted performance testing and troubleshooting to optimize network efficiency and reliability.
