

JOSEPH JOSHUA

AWS Architect/ Cloud & DevSecOps Engineer

US Citizen | Active DoD Secret Clearance | Active Public Trust

Dallas-Fort Worth, TX 76063

Phone: 1(202)-763-1526

Email: joseph.m.joshua@outlook.com

Summary

Experienced AWS Architect, Cloud Engineer, and DevSecOps Specialist with over 10 years of expertise in designing, managing, and optimizing mission-critical cloud deployments. Proficient in leveraging advanced cloud technologies, configuration management, CI/CD pipelines, and DevOps practices to automate and enhance complex environments. Adept at collaborating with large technical teams to deliver scalable and secure solutions, ensuring high performance and operational excellence.

Education

Stevenson University – Owings Mills, MD

Bachelor of Science in Cybersecurity and Digital Forensics

Baltimore City Community College – Baltimore, MD

Associates of Art in Cybersecurity and Digital Forensics

Certification

- **CompTIA Linux + Certification Valid**
- **CompTIA Security + Certification Valid**
- **CompTIA CASP + Certification Valid**
- **HashiCorp Terraform Associate Certification Valid**
- **AWS Solution Architect Professional Certification Valid**
- **AWS Security specialty Certification Valid**
- **AWS Advanced Networking specialty Certification Valid**
- **AWS DevOps Engineer Professional Certification Valid**
- **AWS Partner Certification Valid**
- **Scrum Master Certification - SMC Valid**
- **Agile Project Management Certification Valid**
- **Waterfall Project Management Certification Valid**
- **Project Management Professional Certification Valid**

Professional Experience

Caylent Inc, CA (Pipeline Team)

December 2020 - Present

Senior DevSecOps Engineer

- Managing various Infrastructure encompassing hardware, operation systems, database management systems, network, and security.
- Responsible for evaluating cloud-based technical solutions/designs in accordance with client requirements.

- Provide expertise in monitoring, designing, and engineering of Cloud Infrastructure and applications for Cloud Deployment using AWS Services.
- Responsible for overseeing the client's overall cloud experience as the engineering point-of-contact for resolving performance or delivery issues, while ensuring that all vendor cloud solutions adhere to industry and Government-mandated security protocols, controls, and best practices.
- Collaborated with Cybersecurity resources to document controls, support accreditation, and manage Interim Authorization to Test (IATT) and Authority to Operate (ATO) documentation. Administered and monitored IL5/IL6 cloud accounts, built parent and child accounts, and maintained AWS product knowledge. Developed High Availability and Disaster Recovery processes, and established DevSecOps Pipelines within the GovCloud Framework.
- Escalated issues, problems, risks, and constraints to appropriate levels for resolution, while working independently and within teams to set up and maintain cloud architectures. Managed multiple competing customer priorities with minimal supervision and performed hands-on work in DoD-based cloud environments.
- Applied Agile methodologies for effective project management and team leadership, creating technical documentation and system architecture designs. Implemented logging and monitoring strategies, API management, and infrastructure automation to support scalable and resilient cloud environments.

Caylent Inc, CA

Principal cloud DevOps Engineer

November 2017 – December 2020

- Implemented DevOps practices with a focus on Continuous Integration (CI) and Continuous Deployment (CD), designing and deploying CI/CD pipelines using AWS CodePipeline to integrate CodeCommit, CodeBuild, and CodeDeploy, along with Docker containers, Kubernetes, microservices architecture, and serverless architecture to enhance scalability and efficiency.
- Leverage Git, Jenkins, Maven, SonarQube, Kubernetes and Splunk to perform a safe release of application into fleets of servers and microservices at the level of dev/stage/prod environment.
- Implementing Machine Image Pipeline and integrated Patch Management
- Leveraging Docker to build, test and deploy applications in different environments.
- Building server-less architecture with Lambda integrated with SNS, CloudWatch logs and other AWS services.
- Managing provisioning of AWS infrastructures using CloudFormation, Terraform, and Infrastructure as Code (IaC) practices.
- Implementing preventive guardrails using Service Control Policies (SCPs).
- Implementing detective guardrails using Cloud Custodian policies and AWS config.
- Designing and implementing for elasticity and scalability using Elastic cache, CloudFront – Edge locations, RDS (read replicas, instance sizes) etc.

- Led cloud migration and hybrid cloud solutions projects, including designing and developing migration strategies using tools like CART, ADS, Migration Evaluator, DMS, and CloudEndure. Successfully migrated high availability web servers and databases to AWS EC2 and RDS with minimal or no downtime.
- Focused on cost optimization, disaster recovery, and risk assessment within the AWS Well-Architected Framework, ensuring compliance with audits and ITIL practices. Managed incident response and root cause analysis to maintain system stability and performance.
- Designing for high availability and business continuity using self-healing-based architectures, fail-over routing policies, multi-AZ deployment of EC2 instances,
- ELB health checks, Auto Scaling, and other disaster recovery models.
- Leveraged AWS Control Tower to set up and govern a secure, multi-account AWS environment based on the company's requirements.
- Implemented and managed Ansible Tower to scale automation and handle complex deployments.
- Developing CI / CD to standardize the infrastructure and automate the DevOps processes, allowing customers to rapidly build, test, and release code while minimizing errors.
- Create and modify scripts or applications to perform tasks, using python, bash script and ansible.
- Organize/facilitate scrum related meetings while facilitating discussion and conflict resolution.
- Conducted regular monitoring and analysis of security incidents using Dome9, providing timely responses to security events and collaborating with incident response teams to contain and remediate incidents.
- Effectively manage team relationships, coached, and supported the program manager to be the Product Owner. Identified and resolved impediments, tracked progress, facilitated release planning, coached teams on Agile practices, delivered high quality tested software with Agile teams.

chimes Inc, MD

March 2012 -November 2017

AWS Solutions Architect

- Managing various Infrastructure encompassing hardware, operation systems, database management systems, network, and security. • Designed secured, cost optimized, highly available and fault tolerant infrastructure in AWS
- Architected and configured Prod/Dev/Stage/QA environments in AWS (VPC, subnets, security groups, EC2 instances, load balancer, RDS, Redis, Elastic cache, route53, IAM, Kinesis, Kafka, Redshift, ECS, Dynamo DB, etc.)
- Implemented security best practices in AWS including multi factor authentication, access key rotation, role based permissions, enforced strong password policy, configured security groups and NACLs, S3 bucket policies and ACLs,etc
- Optimized cost through reserved instances, selection and changing of EC2 instance types based on resource need, S3 storage classes and S3 lifecycle policies, leveraging Autoscaling etc.
- Configured Prometheus and Grafana and CloudWatch alarm rules for operational and performance metrics for our AWS resources and applications.
- Architected and implemented continuous integration and deployment pipelines using Jenkins and other CI tool.
- Architect high availability environment with auto scaling & Elastic Load Balancer
- Securely deploy MySQL Primary DB and its read replica in private subnet with multi-AZ for disaster recovery and best practice
- VPC peering with other Accounts allowing access and routing to service and users of separate account to communicate.

- Design and deploy framework on GitLab and GitHub action for DevOps teams and support implementation of the architectural design.
- Implementing Control Tower Preventive and Detective guardrails and leveraged Account Factory, integrated with Lambda for new AWS account creation and setup.

Guarantee Trust Bank, Dallas, TX February 2008 -March 2012

System Administrator

- Managing various infrastructure components, including hardware, operating systems, database management systems, network, and security. Responsible for troubleshooting and maintaining TCP/IP, Apache, SMTP, and DNS applications. Upgraded and configured system software to support infrastructure applications, applied OS patches regularly, and created/modified host-based firewall rules using IPTables.
- Designed and implemented new server standards for core business services, provided ongoing maintenance and development, including bug fixes and patch sets for existing web applications. Oversaw installation, configuration, management, and maintenance of Linux systems, delivering end-to-end Linux administration, including system upgrades, performance tuning, and troubleshooting.

Technical Skills

Hardware: Dell PowerEdge R410, R420, R710, R720, R730, Dell Tower Servers: T320, T 410, T420,

Software: Apache, FTP, DNS, Kickstart, Samba, GIT, NFS, Jenkins, SSH, Putty, MySQL, SonarQube, Nexus, Ansible, Jira, Confluence, OMD-Nagios, Maven, Tomcat, PostgreSQL. Etc.

Programming: Python, Batch & Bash Scripting

Operating System: Linux Red hat/Centos 5,6,7, Ubuntu, VMware ESXi, Windows XP, Vista 7, 8, Mac OS.
