

Shawn Freeman

Baltimore, MD • 443-632-5080 • shawnfreeman.j@outlook.com

Summary

Detail-oriented, organized and meticulous full stack software engineer with experience from various software industry backgrounds. Experience expands from game development, accreditation software and industry leading medical software. I enjoy all facets of software development. Most of my time has been spent in C# Microsoft stack but love expanding my knowledge in new areas. I look forward to collaborating with my peers but I am also capable of running projects independently.

Relevant

Languages / Frameworks

C# .Net Core & .Net Framework | SQL Server | Angular | React
| SOAP | REST | SAML | Entity Framework | LINQ | MVC
| Xamarin | UWP | WPF | Node.js | JavaScript
| HTML/CSS | ADO.NET | OAuth2 | PowerShell | Material Design

Education

University of Baltimore

Bachelor's degree

Applied Science - SDE

Completed: May 2013

CCBC Essex

Associate's degree

Applied Science - SDE

Work Experience

November 2021 - Current

OmegaBloods LLC – Bel Air, MD (*Part-time*)

Full Stack Software Engineer

- Developed mobile application deployed to iOS and Android app stores using React.
- Designed and implemented C# .Net Core 7 micro-services architecture via REST to support mobile applications, websites, and other business applications in a modular fashion.
- Integrated with payment processing platforms such as Stripe and PayPal for in app purchases.
- Utilized GitHub CI/CD operations.
- Managed all facets of SDLC which includes but not limited to environment management and code releases, legal research, payment processing, domain management, and business entity support.

Projects

- *Amory*
Mobile application using React intended to connect users based on proprietary compatibility rules. Some features include user authentication, real-time messaging, and file uploads.
- *Breeding Grounds*
Web application which features video playback of user generated content, user comments, user feedback rating, micro-services backend, and azure storage

SparksGroup INC. – Rockville, MD

Software Engineer

- Built databases and table structures for web applications. Utilized Entity Framework code first (LINQ-to-Entities and LINQ-to-SQL) to build database schema and complex SQL queries.
- Conducted data modeling for database designs.
- Participated in architecture designs by providing proof of concept design documentation.
- Pioneered new methods of code review through Azure Pull Requests leading to 25% reduced errors.
- Coordinated deployments within Azure pipelines for new applications, feature updates and fixes.
- Contributed to team meetings and delivered updates on deadlines, designs, and enhancements.

Projects

- *HubSpot Integration*
Provided expertise in third-party integrations on HubSpot Marketing APIs project leading to 15% increase in candidate volume.
- *Client Portal*
Provided research and proof of concept for new front-ends solutions ultimately leading to Angular 13 release of Client Portal project.
- *Onboarding Videos*
Led research and implementation of integrating Azure Media for video support of new hire onboarding videos. Feature supported complex rules for sending videos to users for specific times and time ranges.
- *Quality Check (QC) Feedback*
Designed and implemented QC process with dynamic rating functionality to allow in-house employees and external candidates to provide feedback on their experience. QC feature freed up recruiter follow-up responsibilities leading to 10% increased productivity for recruiters while also providing valuable insight into candidate retention.

December 2017 – November 2021

LeapOrbit – Columbia, MD

Full Stack Software Engineer

- Participated as team lead on a Maryland PDMP product which sold for \$3m (Nasdaq: EGOV). Product utilized Angular 8+, C# .NET Core, SQL Server, Azure DevOps, Azure Functions, Azure BlobStorage.
- Lead developer responsible for implementing a major interstate communication feature for PDMP product which included Tomcat, client certificate security, 3rd party integrations, and PMIX/RxCheck implementation per public documentation.
- Contributed to team process update which lead to a 50% increase in code-review productivity.
- Collaborated with clients and stakeholders to define solution and work item requirements.
- Managed 5 junior developers which included providing guidance for problems, perform code reviews, and prioritize story work items.
- Develop and manage CI/CD pipelines in Azure DevOps.
- Develop back-end APIs and Micro-services using C# .NET / .Net Core.
- Debug applications in production environments using Azure Application Insights tool.
- Provided consultant expertise on other team projects on as needed basis.
Project stacks include Clojure, React, MongoDB, Angular with Material Design, .Net Core.

LeapOrbit (Cont'd)

Projects

- *RxGov PDMP*
A prescription drug monitoring platform, built for Maryland, that consolidates dispenser, prescriber, and law enforcement treatment options. Acquired by NIC (August 2018) reacquired by LeapOrbit (September 2023). RxGov also extended Maryland's PDMP by interacting with other states using industry standards (RxCheck and PMIX).
- *Health Document Repository*
A Microsoft Azure solution for storing clinical documents dynamically using ITI message protocols. Supported uploading and downloading documents securely for clients without previous interaction with the platform.
- *Snapshot*
SSO application built to consolidate various existing 3rd party applications. Snapshot delivered patient data quickly using multiple pre-existing API with client certificate and SAML authentication.
Project delivered 2 weeks ahead of schedule.
- *EDAS*
An ambulance routing service built to help monitor and direct ambulance hospital admittance. EDAS was built with an Angular front-end and .NET Core/SQL backend. Accepted hospital data to be translated with proprietary algorithms to determine hospitals at low to critical capacity.
Project delivered ahead of schedule.

April 2015 – December 2017

NextLOGiK – Columbia, MD

Software Engineer

- Help build and maintain multi-platform architecture that extended to Web, Mobile, and Desktop.
- Communicate with external resources to provide SSO Solution for the platform.
- Handled database migrations to newer versions of the platform.
- Updated an ASP.NET WebForms front-end to utilize the latest styling frameworks.
- Developed new Windows 10 UWP native application and Xamarin Forms (iOS/Android) Compliance tool that can run online or offline tied to a large SaaS WebAPI platform.
- Develop and provide custom reporting queries for clients.
- Manage and support multiple clients on various versions of product.
- Deploy platform updates to development and production environments.

Extra Activities

May 2023 – Current

Ballroom Dance Instructor

- Tutor students in ballroom dances using proprietary school figures and methods.
- Public speaking in group classes containing 2-10 students.
- Choreograph student routines for showcases, weddings, or other events.
- Provide video and photography support for company events.
- Study syllabus dance figures and provide training to new instructors.
