

Robert Cromley

Wake Forest, NC ▪ rcromley@intuitivecs.com ▪ 614.226.7445 ▪ [linkedin.com/in/robcromley/](https://www.linkedin.com/in/robcromley/)

Senior Developer

Veteran software architect and consultant with over two decades of experience designing and building enterprise systems across finance, retail, biotech, and manufacturing sectors. Specializes in architecting scalable, cloud-native applications using Java, Scala, and modern data platforms like Hadoop and Spark. Recognized for turning around failing projects and guiding cross-functional teams through complex migrations and performance-critical implementations.

Core Competencies

Agile Methodologies | Architectural Design | Behavior Driven Development | Client Communication | Cloud Migration | Content Management | Cross-functional Collaboration | Data Governance | ETL Process Development | Kanban | Mentorship | Microservices Architecture | Process Optimization | Risk Data Management | Scrum | Software Lifecycle Management | Software Quality Assurance | System Analysis | Team Mentorship | Test Driven Development

Technical Expertise

Languages & Frameworks: Java | Scala | Kotlin | C# | VB.NET | Spring | Spring Boot | Hibernate | JPA | EJB | Struts | Node | TypeScript | Angular | React | DataStage | SSIS | COBOL | RPG | Synon | CL

Data & Cloud Technologies: Hadoop | Spark | Kafka | Cassandra | Oracle | SQL Server | Postgres | HDFS | Cosmos DB | Data Fabric | AWS | GCP | Azure

Tools & Platforms: Eclipse | Visual Studio | Jenkins | Maven | Ant | Git | SVN | Tomcat | WebLogic | WebSphere | AS/400 (iSeries) | Mainframe

Web & Integration: Microservices | REST | SOAP | Web Services | JMS | WSDL | Axis | Camel | XML | JSON | JDBC

Testing & DevOps: JUnit | Selenium | Cucumber | Gherkin | BDD | TDD | JIRA

Operating Systems: Windows | Unix | Linux | Solaris

Certifications: AWS Cloud Practioner | AWS AI Practioner | AWS Data Engineer | AWS Machine Learning

Professional Experience

Intuitive Consulting Services (Independent Contractor) | Wake Forest, NC

04/2016 – 5/2025

Senior Developer Consultant

- **Abercrombie & Fitch:** Transitioned a legacy Java POS system to a backend of RESTful services in Java, with Kotlin powering Android-based front-end devices across retail locations. This included various web based front ends.
- **5/3 Bank:** Reengineered legacy DataStage and SSIS workflows to improve long-term maintainability and align with the skill set of development team. These ETL solutions supported critical banking functions and regulatory audit processes, delivering structured data on daily and weekly schedules to meet compliance standards.
- **Institute for Systems Biology:** Engineered data-processing pipelines for biomedical research, integrating advanced fingerprinting algorithms and big data technologies to accelerate COVID-19 research collaborations with major healthcare partners.
- **Eli Lilly:**
 - Designed and built data ingestion and transformation interfaces for a drug research ETL platform, using Rest, SOAP, and file-based data feeds with Kafka and Camel for real-time processing.
 - Overhauled a flawed offshore-developed front-end application with severe security and architectural deficiencies, rebuilding it to meet enterprise standards and compliance requirements..

Redwood Software | Morrisville, NC**06/2013 – 04/2016***Development Manager*

- Rebuilt and optimized core REST and SOAP web services for the Report2Web platform, enhancing performance, service stability, and integration reliability across Java and .NET (C#) environments.
- Led the overhaul of the data layer to resolve schema inconsistencies between SQL Server and Oracle, introducing structural boundaries that transformed delicate architecture into a maintainable, enterprise-grade foundation.
- Championed Behavior-Driven Development by mentoring junior developers by creating an automated testing suite using Selenium, Cucumber, and Gherkin, while also transitioning the team from Waterfall to Agile methodologies, including Scrum and Kanban.

Deutsche Bank | Cary, NC**03/2010 – 06/2013***Lead Developer*

- Architected and developed data ingestion pipelines for the RPL-ODS system, staging risk data from XML, JMS, databases, and web services into an Oracle Exadata warehouse and Hadoop cluster designed as the bank's central risk data source.
- Built and deployed MapReduce jobs using Mahout within the Hadoop ecosystem, enabling advanced analytics and scalable data processing for downstream consumers.
- Established robust client-facing access mechanisms, including REST services, stored procedures, and JMS, while embedding TDD and BDD (via dbFit) into the team's workflow to raise code quality and accelerate delivery.

Cromley Computers, Inc. | Lewis Center, OH**04/1995 – 03/2010***Senior Developer Consultant*

- **The Hoover Company:** Primary developer for Synon & COBOL warehouse and distribution system handling everything from receiving product from manufacturing through warehousing, shipping, and logistics.
- **Honda Manufacturing:** Enhanced customer-facing Request for Quote (RFQ) system named eQuote. eQuote coordinates price quotes, scrap allocation, and supplier compensation for all North American Honda manufacturers..
- **Donatos Pizza:** Worked with a varied team of offshore and onshore developers to develop a new POS system. Designed and coded the backend system that was architected as an SOA solution with the expectation of containing the business logic for both individual stores and online ordering. Functioned as a lead developer and as the onshore lead for the offshore team. After a very successful implementation of this system to select stores there has been a large demand for this system because of it's ease of use, functionality and stability.
- **JP Morgan Chase:** Worked as lead developer to develop an intranet-based MERS reconciliation application. This Service-Oriented Architecture (SOA) application takes information feeds from various sources in the form of flat-files and web-services, allowing users to verify and modify data to ensure compliance with MERS standards
- **Nationwide Insurance:** Worked as lead developer on claims system used by field representatives to handle insurance claims (CLASS).

3X Corporation | Columbus, OH**03/1993 – 04/1995***Consultant*

- Worked for various clients developing code in Synon, Cobol, and RPG.

Military Experience

Served in an Army MASH unit in Operation Desert Storm from 1990 to 1991; Honorable Discharge in 1999

Education

Bachelor of Science in Computer Science

Ohio State University – Columbus, OH
