

Angelo Fajardo

Principal Software Engineer | .NET Lead

+1 (321) 352-3996 | angelrudor@gmail.com
Dallas, TX | <https://www.linkedin.com/in/angelo-fajardo-761181b3/>

Principal .NET / Cloud Engineer with **11+ years** building **large-scale, event-driven platforms** in **automotive, SaaS, and enterprise environments**. **Expert in distributed systems, connected vehicle & IoT telemetry pipelines, high-throughput APIs, performance tuning, secure architecture, and CI/CD automation**. Passionate about applying **AI and predictive analytics** to elevate **reliability**, reduce **time-to-market**, and harden platforms against **security threats**.

TECH SKILLS

- **Languages & Frameworks:** C#, .NET (Core, MVC, Web API, gRPC, WCF), C++, Python, VB.NET, Django
- **Front-End & Mobile:** Blazor, Razor, Angular, React, JavaScript, TypeScript, Node.js, Xamarin, .NET MAUI
- **Cloud & Infra:** Azure (Functions, AKS, Event Hubs, Service Bus, API Management, App Gateway, Key Vault), AWS (Lambda, SNS, DynamoDB, CloudWatch, ELB), Terraform, Ansible
- **Data & Storage:** SQL Server, PostgreSQL, MySQL, Oracle, MongoDB, DynamoDB, Cosmos DB, EF, ADO.NET
- **Streaming & Messaging:** Kafka / Confluent, Azure Service Bus, SignalR
- **APIs & Integration:** REST, GraphQL, SOAP, gRPC, API Gateway patterns
- **Testing & Quality:** xUnit, NUnit, MSTest, Jest, Cypress, Moq, JMeter, SonarCloud, A/B Testing
- **DevOps & Tooling:** GitHub, Bitbucket, Azure Repos, Jenkins, TeamCity, Azure DevOps, Application Insights, Serilog
- **Analytics & Data Eng:** Databricks (PySpark/Scala), Power BI
- **Security & Identity:** OAuth2/OIDC, PingFederate, Azure AD (Entra ID), Key Vault, RBAC/ABAC
- **CRM / ERP:** Microsoft Dynamics 365

CORE STRENGTHS

Domain-Driven Design (DDD) | Event-Driven & Microservices Architectures | Connected Vehicle / Telemetry | High-Scale API & Platform Engineering | Performance & Reliability Optimization | Secure Architecture (RBAC/ABAC, Secrets Mgmt) | Cloud (Azure & AWS) | Observability & SRE | Data Pipelines & ETL | Front-End Modernization | AI/ML Integration | DevOps & Infrastructure-as-Code | Technical Leadership & Mentorship

PROFESSIONAL EXPERIENCE

Principal / Senior Software Engineer (Technical Lead) Rivian Automotive, Remote

02/2020 - 05/2025

Role summary: Led architecture, telemetry, and platform modernization initiatives supporting connected vehicle, charging, and predictive capabilities across a high-growth EV ecosystem.

- **Drove adoption of domain-driven and event-driven architecture (.NET, Azure, Service Bus, Kafka)** reducing cross-service coupling and cutting average feature lead time by 35%.
- **Engineered high-throughput telemetry ingestion (C#, gRPC, Azure Event Hubs)** sustaining 100K+ concurrent vehicle event streams with sub-2s processing latency for **diagnostics, OTA staging, and energy optimization analytics**.
- **Optimized SQL Server and Cosmos DB access patterns (index strategies, partitioning, caching)**, reducing P95 query latency 32% and accelerating internal operational dashboards.
- **Modernized legacy AngularJS consoles to Angular 14** with **RxJS caching** and **Kendo UI**, lowering initial load time 45% and boosting productivity for 250+ internal fleet and plant users.
- **Implemented real-time notification framework (SignalR + Observer pattern)** surfacing battery health anomalies, line alerts, and OTA deployment states—cut detection-to-action time 40%.
- **Integrated AI-driven anomaly detection (Azure Cognitive + custom ML)** to flag drivetrain and battery deviations, reducing unplanned service incidents 18% and projected warranty cost exposure by \$480K annually.
- **Hardened platform security (Azure Key Vault, PingFederate/Entra ID, RBAC/ABAC policies)**, decreasing unauthorized access attempts 40% and improving audit readiness.
- **Deployed layered API gateway pattern (Azure API Management + App Gateway)** with fine-grained rate limiting for telemetry and inference endpoints—achieved resilient operation under 10K+ concurrent API clients.
- **Automated infrastructure & delivery (Terraform, Azure DevOps, Jenkins)** cutting build times 25%, deployment incidents 20%, and enabling safe blue/green releases for critical microservices.
- **Established comprehensive observability (Application Insights, structured Serilog logging, distributed tracing)** reducing mean time to detect (MTTD) issues 55% and mean time to recovery (MTTR) 50%.
- **Conducted performance/load testing (JMeter)** validating horizontal scaling; improved peak-load API response times 20% under 10K concurrent simulated sessions.
- **Championed engineering excellence:** enforced SonarCloud quality gates, sustained 80%+ unit/integration coverage, mentored 8 engineers—cut production defect rate 40%.

Senior Software Engineer

ConnectWise, Tampa, FL

09/2018 - 02/2020

Role summary: Modernized MSP SaaS platform components—microservices, identity, analytics, and UI—to improve deployment velocity, scalability, and operational insight.

- **Re-architected monolithic enrollment & provisioning into microservices (.NET Core, AKS)** increasing deployment frequency from 4/month to 12/month (3x) while reducing rollback events 60%.
- **Implemented micro-frontend architecture (React, Next.js)** with independent CI/CD pipelines, trimming mean UI release cycle time 35%.
- **Built identity migration service (C#, GraphQL, Entra ID, scheduled jobs)** consolidating user stores; improved authentication success rate 15% and cut related support tickets 25%.
- **Applied CQRS pattern with Azure Service Bus** to decouple read/write operations for high-volume asset & ticket data, lowering average read latency 38%.
- **Modernized Blazor Server + Telerik dashboards** achieving 35% faster component render and WCAG AA accessibility compliance improvements.
- **Enhanced SOAP-based financial/billing processing (XML serialization, batching, parallelization)** increasing transaction throughput 30%.
- **Established structured logging & tracing (Serilog + Application Insights)**, reducing average incident triage time 50%.
- **Authored Databricks (PySpark/Scala) ETL pipelines** reducing analytics report generation from 3 hours to 20 minutes (~89% faster).
- **Resolved severe SQL deadlock and blocking issues (SQLDiag, Profiler)**, cutting P95 query latency from 750ms to 310ms (59% improvement) during peak traffic.

Senior Software Developer
Accenture, Houston, TX

09/2014 - 08/2018

Role Summary: Delivered cloud, streaming, and modernization solutions for enterprise and financial services clients, focusing on latency, scalability, and data availability.

- **Transformed a client credit valuation platform** from monolith to event-driven microservices (**ASP.NET MVC, Angular, Kafka, AWS Lambda, SNS**), reducing transaction latency 50% and enabling elastic scaling.
- **Developed internal automation toolkit (C#, WPF, EF, T-SQL)** improving developer throughput 15% by accelerating environment setup and data preparation.
- **Implemented cloud-native monitoring (CloudWatch + custom PostgreSQL/DynamoDB metrics)** improving SLA adherence and cutting high-severity detection time 45%.
- **Authored IAM and Terraform infrastructure policies (incl. EKS IRSA)** enforcing least-privilege access across microservices and event workflows.
- **Integrated Confluent Kafka connectors & streaming apps (Kafka Streams, ksqlDB/Flink)** replacing batch transfers—reducing data availability lag from 4 hours to ~5 minutes (>98% reduction).
- **Refactored legacy services** to standardized Kafka schemas/contracts, lowering integration defects 35% and accelerating onboarding for new consuming services.

EDUCATION

Bachelor of Science (B.S.), Computer Science

Florida State University
