Redmond, WA, 98052 | +1 (425)-542-2102 | hiimanshul@gmail.com | linkedin.com/in/anshul-anshul/

Professional Summary

Highly Motivated, analytical and decisive Project manager having **19+ years** of Service experience delivering complex end to end projects in Banking, Insurance, Airlines verticals. Deep experience in Service Delivery, Operations, Workplace modernization, Cybersecurity, Data Centers(DC), DC Exits, DC migrations, Cloud Migration, De- commissioning, Storage, Networking/Cabling projects, Middleware, Mainframes, Server upgrades and builds, Workstation builds, User data and application deployment/Upgrades/migration. Hands on ERP Systems for placing hardware and software procurement requests, managing contracts, vendors and financial reporting. Well versed with tools and techniques of project scoping, estimation, scheduling, resourcing, risk, communication & stakeholder management. Experienced in engaging Accounts & Operations teams for Contract negotiations, Procurement & delivery, Defining SLA and KPIs. Expert in Agile based Methodologies and experience in adopting Agile based Scrum through taking up roles of Scrum Master, Program manager.

Professional Experience (Till Date)- 17+ yrs

Organization	Designation	Duration of Employment
Puget Sound Energy	Sr. Infrastructure Project manager (Contractor)	Mar-2024 - Till date
IBM US	Infrastructure Project Manager (Contractor)	Oct-2023- Mar-2024
Kyndryl Ltd	Project Manager- IT Infrastructure	Sept 2021- Feb 2023
IBM India Ltd	Project Manager- IT Infrastructure	Mar 2010 - Sept 2021
IBM India Ltd	Middleware SME	Mar 2010 - Feb 2013
KPIT Cummins GBS Ltd	Oracle Weblogic Support Engineer	Jan 2008 - Feb 2010
Relationals InfoTech (P) Ltd.	Software Developer-Java/J2EE	Jan 2007 - Jan 2008

Few Complex Projects Delivered :

Organization: Puget Sound Energy, Project: EMS Platform Replacement Role: Sr. Infrastructure Project Manager

- Responsible for procurement of hardware and working with Vendors for delivery. Coordinating with facilities team, Network teams, Network architects to rack and stack the hardware.
- Worked with FW team, Application team and Architects to prepare a Comprehensive FW drawing the application with Inbound and outbound rules with port details for each application server.
- Got the networking done for Workstations by Placing switches in data centers and getting Pathways and Jacks implemented by Electrical staff.
- Order Hardware and deployed the workstations on the floor, joining them to the domains.
- Get the connectivity done from the data center to the Floor
- Work with Low voltage Cabling team to lay the cables for installing the jacks at workstations
- Getting the workstations setup at each workstation
- Setting up the meetings, sending out communications and status reporting.
- Managed stakeholders by building engagement strategies and building stakeholder relationships.
- Managed the project within build and build financial reports for the Portfolio.

Organization: Puget Sound Energy, Project: Digital workplace transformation- M365 Enablement Role: Sr. Infrastructure Project Manager

- Responsible for working with Vendor teams to get Win11 and M365 rollout done for 5000 PSE resources including Full-time, Contractors and Vendors. Coordinating Application testing and deployment waves with Organization Change Management and Communication team
- Performed Process Automation, Created Dashboards using PowerAutomate, Power BI and ServiceNow.
- Executed SQL queries to generate reports in ServiceNow.
- Managing the critical patch activities
- Using AzureDevOps to get the Sprints and backlogs.
- Working with the Delivery Manager to best align with Organization Goals and deliver the project in timely manner.
- Managing the budget and financial reporting.
- Conducting Steering Co meetings
- Getting the lab setup created for Vendor resources to test the rollout on Pilot Users but testing In-Place upgrade and BareMetal

Image.

- Preparing Rollout Communications and ring fenced plans.

Organization: Puget Sound Energy, Project: Common Services Domain- Zero Trust Role: Sr. Infrastructure Project Manager

- Weekly Meetings with Team, Backlog grooming, Sprint Planning, sprint review and retrospective meetings.
- Managing and supporting domain builds and coordinating with IT services and Cloud Infrastructure Teams
- Facilitated infrastructure, Development team meetings for requirements, Blockers, and Key metrics discussions.
- Ensure risks are identified, addressed, recorded, and communicated to Key stakeholders.
- Backlog tracking and status reporting
- Liaise between Infrastructure and IT services owners
- Provide periodic project status and ensure key Milestones and deliverables are met.
- Security vulnerability and Risk assessment, remediation, mitigation steps
- Network /Firewall rules creation, NAT for Inbound/outbound processes.

Organization: IBM US, Client: HydroQuebec, Project: NOI upgrade from On-Prem to Azure Role: Infrastructure Project Manager

- People manager and function manager for a team of 6 reports.
- Daily Standup Meeting with Team to track the Backlog in Scaled Agile Framework using Scrum.
- Weekly Meetings with Team, Backlog grooming, Sprint Planning, sprint review and retrospective meetings.
- Managed/supported release cycles, coordinated with Application & Infrastructure Teams
- Facilitated infrastructure, Development team meetings for requirements, Blockers, and Key metrics discussions.
- Ensure risks are identified, addressed, recorded, and communicated to Key stakeholders.
- Backlog tracking and status reporting to Key stakeholders using AzureDevOps.
- Liaise between Infrastructure and Software Development Team inducing Transparent communication and documentation.
- Provide periodic project status and ensure key Milestones and deliverables are met.
- Security vulnerability and Risk assessment, remediation, mitigation steps
- Network /Firewall rules creation, NAT for Inbound/outbound processes.
- Towards the end of the project made sure the CI/CD pipeline is set up for seamless execution using Ansible.

Organization: IBM Ltd, Client: Fidelity National Information Services USA , Project: Janus DC Relocation for Insurance client (Cybersecurity/Compliance/Disaster Recovery) Role: Program Manager

- Gathered requirements, performed estimation, and documented a statement of work and took sign off from FIS.
- Conducted kick off meeting, engaged resources, prepared RACI matrix, raised procurement requests and prepared stakeholder register, communication plan and defined escalation Matrix at the start of the project.
- Reserve Rack space and building the network in new rack space in Data center
- Prepared Project plan, defined Milestones. created work breakdown structure, Baselined the project in terms of schedule, time and scope. Tracked and monitored the project throughout the project lifecycle to keep track of schedule, cost and scope variance.
- Led installation and configuring of refreshed infrastructure in New DC, Procurement of devices, Switches and configuration of switches, establishing connectivity between new DCs and old DCs to facilitate data transfer, Procured Cables and fibers for establishing connectivity, Designing Implementation strategy, and new workload shift DR strategy,
- Submitted timesheets for approvals and forecasted the cost and revenues realized each month.
- Conduct and tracked Risks, issues, actions, and dependencies (RAID) calls each week.
- Decommissioned existing mainframe infrastructure at Old DCs, disposing off the devices and formulating process for new vendor calls for VPN.
- Documented lessons learnt, conducted retrospective, took feedback from FIS.
- The DR shift capability brought in **99.99% Availability** and better scalability for executing more than 300 Million Transactions per day.
- My on-time, in-budget delivery led to **50% revenue growth** for IBM.
- Reference Case study link : <https://www.ibm.com/case-studies/fis>

Organization: IBM Ltd, Client: Qantas Airlines, Project: DCLAN On-Premises ESX to IBM Pureflex (IaaS) migration Role: Program

Man- ager

- Migrated 60 applications running on Windows, AIX, Linux & Solaris Virtual machines from Legacy ESX to IBMPureflex (IaaS) from 2 IBM datacenters. Identified 270 critical VMs that supported critical applications that were causing flight delays and migrated them from ESX legacy environment to IBM PureFlex.
- Led the Program under 5 phases: Prepare, plan, migrate, operate, Optimize.
- Developed a strategy by mapping workloads to assets and applications. I audited the Data center and prepared a list of Devices and applications, logically organized the Applications in Order of Criticality. Evaluated Key Performance Index (KPI) for each application.
- Identified the right application by prioritizing the application, time taken to move the application and categorized it on 6Rs (Rehost, Re-platform, Redesign, Re-purchase, Retire, Retain)
- Built Cloud migration strategy, prepared Checklist, performed Proof of concept for Application migration, Managed Budget, Resources, Timelines, Stakeholder communications, escalations, SLAs, KPIs, Procurement and Schedule.
- Worked with Client and stakeholders to prioritize on application migration and backlog. Assigned the sprints to Systems administrators, network and storage team.
- Conducted Sprint reviews, Retrospectives, daily standups to follow up on each work stream. Used Jira to manage the workflow of the project and Confluence, Artifactory for knowledge repository.
- Coordinated will 3rd party vendors, Cross functional teams and stakeholders including CXO/CVP to ensure seamless migration for all the applications.
- Was recognized for implementing a strategy that helped in **reducing effective costs by 40% on RUs** used after migration.

Organization: IBM Ltd, Client: Qantas Airlines, Project: Euclid CFDC to ULDC with Networking

Role: Program Manager

- Led kick off meeting, gathered requirements, perform estimation of time, cost and efforts to document it into Statement of work and seek sign off from Qantas.
- Procured of cables, SAN switches, Firewalls. Routers. Software Licenses, Vendor resources, Data center resources.
- Engaged Resources on the project and prepared a RACI matrix.
- Developed Project Plans, milestone deliverables and Work breakdown structure keeping assumptions, dependencies into consideration.
- Got the connectivity established between CFDC and ULDC. Routers. SAN switches, Firewalls and networking and new devices fixed in the data centers.
- Collaborated with stakeholders to build a strategy and implementation plan of migrations.
- Liaison with external and internal stakeholders to get the tasks completed.
- Tracked and mitigated risks, issues.
- Used ITIL processes to get the Change tickets submitted in ServiceNow to implement a change.
- Conducted status reporting meetings, forecasting and regular audits of the project.
- Followed change management process to seek approvals on the change request for the project and re-baseline the project plan and associated cost.
- Documented lessons learnt, moved the new infrastructure to steady state and followed server activation and deactivation process to get the devices added in Asset registry and configuration management tools.
- Got delivery acceptance document signed off from Qantas.
- Updated all the documents related to the project in Project Document Repository.
- Conducted Customer satisfaction survey to seek feedback.
- There was **30% savings on cost** for Qantas in terms of rackspace, power and datacenter facilities consumption after DC relocation and consolidation.

Organization: IBM Ltd, Client: Westpac Banking Corporation, Project: Citrix to SVDI Migration (Workspace)

Role: Project Manager

- Led DevOps team of 8 resources to meet the Cybersecurity requirements raised by KPMG for Westpac responsible to build network for WBC offshore users and moving them from Citrix to SVDI by restricting data leakage.
- Defining, Managing the roadmap as per project evolution and customer requirements SOW, WBS and reporting the updates to all stakeholders using monthly reports, dashboards and governance meetings.
- Managed the project lifecycle of Designing & delivering the significant milestones of the project.
- Managed Scope, changes, Stakeholders, communication, Escalations, Risks, issues
- Built and established strong partnerships with teams, vendors and customers.
- Led meetings and Created project plans with established timelines, assigned to appropriate teams and managed the workflow

de- cided.

- Drove continuous improvement of project delivery process.
- The success story of this project was published in WBC Newsletter, **IBM Contract was renewed** with Westpac banking and I was awarded with Hall of Fame Award for exceptional project delivery.

Skills and proficiencies

Project and Program Management: MPP, MS Excel, Trello, Bluesite, **Jira**, Confluence, **AzureDevOps**, **PowerBI**, CognosBI, Project Management,

Agile & Scrum Methodology, Quality Assurance, Project Planning & Project Tracking, Customer Interfacing & Handling

Stakeholder Communications & Client Relations, Software Development Lifecycle, Software delivery & Release

Management Cross-Functional Collaboration, Resource & Workflow Planning, Risk Management, Project Scope & Change Management

Program Leadership, Incident Management, problem management, Change and configuration Management, Data center infrastructure management (DCIM), SAP Ariba, Source Tool, ServiceNow, Remedy, ITSM, Clarity.

Programming Languages and Technologies: Java/J2EE, HTML, JavaScript, MySQL, SQL, Object Oriented Programming, System Design

Middleware Technologies: IBM Websphere, Oracle Weblogic Server, Apache, Tomcat, IIS, Sunone

Operation Systems: Solaris, Linux, AIX, Windows

Educational Qualification

Institution / Degree	Year	Score
Institute of Management Studies, Devi Ahilya University, Indore, India MBA (e-commerce)	June,'05-June,'07	82%
Institute of Management Studies, Devi Ahilya University, Indore, India Bachelors of e-commerce	May,'02-June,'05	81%
