

Name: Pavan R

Contact: +1-940-277-9433

Mail-Id: Pavanrama399@gmail.com

PROFESSIONAL SUMMARY:

- 10 years building enterprise apps: Java/J2EE (Spring Boot, Hibernate/JPA), REST/SOAP services, messaging (Kafka/JMS), SQL; front-end with JavaScript/TypeScript, HTML5, CSS3, Bootstrap, Angular/AngularJS; deployments on AWS.
- Built Spring Boot microservices and REST APIs running on AWS (EKS, ECS/Fargate, EC2).
- Designed event-driven flows with Kafka and Kinesis; standardized producers/consumers.
- Implemented serverless backends with Lambda, Step Functions, and Event Bridge.
- Secured services with Spring Security (JWT, pre-auth, RBAC) and managed batch jobs with Spring Batch.
- Modeled data with Spring Data JPA/Hibernate and Spring Data MongoDB.
- Used DynamoDB for key-value workloads; tuned capacity, indexes, and TTL.
- Added Elastic Cache (Redis/Memcached) to cut DB load and latency.
- Automated CI/CD with Code Pipeline, Code Build, Code Deploy, Jenkins, and GitHub Actions.
- Enforced quality with SonarQube; wrote unit tests in JUnit/Mockito.
- Ran API performance tests with JMeter; stubbed externals using Parasoft virtualization.
- Provisioned infrastructure using Terraform and CloudFormation; parameterized per env.
- Optimized HA with Auto Scaling, ALB/NLB, Route 53 health checks and failover.
- Containerized services with Docker; orchestrated on EKS/ECS; managed via Rancher.
- Built Angular 11 components with HTML5/CSS3/TypeScript and client-side validation.
- Integrated front ends with REST endpoints, standardized JSON contracts with Jackson.
- Led Apigee proxy POC; defined shared flows, policies, and onboarding standards.
- Implemented logging/observability with Log4j → Mezmo (logDNA) and Dynatrace dashboards/alerts.
- Designed domain models, repositories, and service layers; refactored monoliths to microservices.
- Used Java 8+ features (lambdas, streams, CompletableFuture) to simplify concurrency.
- Implemented Spring MVC for legacy modules; migrated to Boot-first patterns.
- Built SOAP integrations with JAX-WS; generated JAXB bindings; handled XML/XSD/XSLT.
- Wrote SQL/PLSQL, stored procedures, and optimized queries on Oracle/Postgres/RDS.
- Managed builds with Maven (multi-module); curated dependency versions and BOMs.
- Deployed apps to Tomcat/JBoss; tuned threads, pools, gzip, and timeouts.
- Implemented caching, pagination, and optimistic/pessimistic locking in Hibernate.
- Added health/readiness/liveness probes; improved on-call with sane retries/timeouts.
- Practiced trunk-based development, PR reviews with clear checklists and CI gates.
- Drove Agile ceremonies; partnered with BAs/POs to refine scope and acceptance criteria.
- Created URD/HLD/LLD and UML diagrams (use case, sequence, class) for new modules.
- Built Node.js APIs for supporting services; deployed on load-balanced instances.
- Implemented MEAN/MERN-style UIs previously (AngularJS/React) where legacy required.
- Managed S3, RDS, DynamoDB, and ElastiCache integrations for durable data paths.
- Set up secrets and config via Parameter Store/Secrets Manager, rotated keys regularly.
- Used Git/GitHub for version control; protected branches and required reviews.
- Introduced feature flags and blue/green or canary releases to lower risk.
- Mentored devs, ran code walkthroughs, and documented patterns and runbooks.
- Worked across SDLC—design, dev, test, release, and production support.

TECHNICAL SKILLS:

Web Tools and Technologies	HTML5, CSS3, XML, JavaScript, Ajax, jQuery, ES6, TypeScript JavaScript frameworks Angular.JS, jQuery, Require.JS, Gulp.js, Bower.js, Express.js, D3.js, Bootstrap, Log4 Java Script.
Programming Languages	Java, Unix shell, PL/SQL, VS Cobol II, PL/I, JCL,C++
J2EE Frameworks	J2ee (Servlets, JSP, custom tags, JSTL, EJB, JPA, JMS, JSF, WebServices [JAX-WS and JAX-RS]), Struts, Spring, Hibernate, Apache-AXIS, CXF, JUnit, Log4J, SLF4J
Cloud & AWS Services	EC2, Lambda, EKS (Kubernetes), S3, Terraform, AWS CloudFormation, Jenkins, GitHub Actions, GitLab CI/CD, AWS CodePipeline, Docker, Kubernetes, ELK Stack (Elasticsearch, Logstash, Kibana), AWS CloudWatch, Prometheus, Grafana
Databases	Oracle 11g, DB2, MySQL, SQL
Application/ Web Servers	WebLogic-14c, IBM Web Sphere-9.0.5, jBoss-7, Apache Tomcat, Node.js.
IDE & Tools	Eclipse 3.2, IBM RAD, NetBeans, Maven, Sublime Text, jBoss Development studio Version control systems GitHub, Rational Clear Case, SVN, TFS.

Education:

MS in Information Technology – Arkansas Tech Univ - Dec22

BTech in Computer Science – Acharya Nagarjuna Univ - 2015

PROFESSIONAL EXPERIENCE:

Client: Sutter Health-Sacramento, CA

June 2023 – Present

Role: Sr. Java Full Stack Developer

Responsibilities:

- Drove full SDLC in Agile/Scrum/Kanban: requirements, design, build, test, and release.
- Designed REST endpoints (controllers), service layer, and DAO layer using Spring IOC and Hibernate/JDBC Template.
- Built MVC presentation tier with Spring MVC; wired views, controllers, interceptors, and view resolvers.
- Implemented Spring Boot services with Security (authN/Z), Batch jobs, and declarative transactions.
- Modeled entities and repositories with Hibernate/JPA; used annotations, HQL/JPQL, and optimized mappings.
- Used Java 8 features—streams, lambdas, Optional, concurrency utilities—to simplify logic and improve performance.

- Built client-side forms, events, and validations with JavaScript/AJAX; integrated with REST/SOAP services.
- Upgraded legacy UI to HTML5/CSS3/Bootstrap; delivered SPA features in Angular (2+) and legacy AngularJS.
- Created reusable Angular components, services, routing, and two-way binding; added custom directives and guards.
- Added Node.js/Express APIs as BFFs to orchestrate backends; produced clean JSON contracts.
- Consumed SOAP services (WSDL) and REST APIs; tested with Postman and SoapUI.
- Implemented messaging with JMS for async create/send/receive flows.
- Worked extensively with XML stack—XSD, XSLT, XPath, DOM/SAX—and JSON parsing/serialization.
- Added global exception handling with @ControllerAdvice and RFC-7807 problem responses.
- Enforced Bean Validation (JSR-380) with groups; server and client checks aligned.
- Implemented pagination/sorting with Spring Data Pageable; consistent query contracts.
- Tuned transactional boundaries and propagation; added idempotency keys for retries.
- Optimized Hibernate: fetch strategies, batch sizes, second-level cache; eliminated N+1s.
- Introduced caching (Ehcache/Redis) for hot reads, rate limiting, and locks.
- Designed JMS topics/queues with durable subs and DLQs; improved async reliability.
- Wrote OpenAPI/Swagger docs; generated API clients and published to the portal.
- Centralized logging with MDC correlation IDs; structured JSON; ELK/Grafana dashboards.
- Hardened security per OWASP: CSP/CORS/CSRF, input validation, and secret rotation.
- Built reusable DTO mappers with MapStruct; trimmed payloads and reduced coupling.
- Created multi-module Maven builds with a shared BOM; reproducible dependency graph.
- Performed DB tuning: indexes, query plans, and stored procedures where needed.
- Ran performance tests with JMeter; profiled JVM (JFR/VisualVM) and fixed hotspots.
- Added feature flags and dark launches; supported blue/green and canary releases.
- Automated smoke and contract tests (JUnit 5/Mockito/Pact); raised coverage >80%.
- Set up UI library and Storybook; enforced a11y (ARIA/WCAG) and responsive patterns.
- Implemented i18n/l10n in Angular (pipes, formatters, translations).
- Built Node/Express BFFs to aggregate upstream calls and cut frontend round-trips.
- Wrote runbooks and on-call playbooks; tightened SLOs and alert thresholds.
- Wrote unit/integration tests with JUnit and Mockito; followed TDD/BDD using Jasmine/Mocha/Karma; used WebdriverIO/Selenium for UI tests.
- Managed builds with Maven (multi-module POMs); set up CI jobs and artifact versioning.
- Used Git for branching, PR reviews, and merges; tracked work and defects in Jira.
- Deployed apps on JBoss and IBM WebSphere; handled configuration, datasources, and tuning.
- Worked with Oracle on the backend (SQL, procedures) and NoSQL stores (Cassandra/HBase).
- Delivered API integrations and UI features on AWS when needed (EC2 and related services).

Environment: Java 8+; Spring (Boot, MVC, Security, Batch, IoC), Hibernate/JPA, JDBC Template; REST, SOAP (JAX-RS/JAX-WS, WSDL), JMS; Angular 2+, AngularJS, React, TypeScript, JavaScript (ES6+), HTML5, CSS3/Sass, Bootstrap, jQuery, AJAX, JSON; Node.js, Express; XML/XSD/XSLT, DOM/SAX; Oracle, Cassandra, HBase; Maven, Git, Jira, Eclipse; JUnit, Mockito, Jasmine, Mocha, Karma, Selenium/WebdriverIO, Cucumber.js, Postman, SoapUI; Apache Tomcat, JBoss, IBM WebSphere; AWS (EC2, S3, RDS, IAM)

Client: New York Life Insurance, NY

May 2022 – May 2023

Role: Java Full Stack Developer

Responsibilities:

- Designed and delivered Spring Boot microservices on AWS (EKS, ECS/Fargate, EC2); exposed REST APIs and async flows via Kafka.
- Built serverless workflows with Lambda, Step Functions, and EventBridge to reduce ops overhead.
- Integrated data layers with Spring Data JPA (RDS/Oracle) and Spring Data MongoDB; added caching via ElastiCache (Redis/Memcached).
- Secured apps with Spring Security (pre-auth + DB rules) and scheduled batch workloads with Spring Batch.
- Automated CI/CD with CodePipeline, CodeBuild, CodeDeploy, Jenkins, and GitHub Actions; added SonarQube checks.
- Managed infra as code using Terraform and CloudFormation; parameterized stacks across dev/test/prod.
- Tuned availability with Auto Scaling, ALB/NLB, and Route 53 health checks and failover.
- Built Angular 11 UI components with HTML5/CSS3/TypeScript, client-side validation, and REST integration.
- Implemented real-time streaming with Kinesis and Kafka (producers/consumers, partitions, throughput tuning).
- Containerized services with Docker; orchestrated on EKS and ECS; used Rancher where applicable.
- Led a POC for Apigee proxy design and API onboarding standards.
- Wrote unit tests with JUnit/Mockito; performed API performance tests using JMeter and Parasoft virtualization.
- Standardized logging/observability with Log4j/Mezmo (logDNA) and Dynatrace.
- Used Git/GitHub for version control and Jira/AWS DevOps Boards for tracking.

Environment: Java 11–18, Spring (Boot, MVC, Security, Batch, Data JPA/MongoDB), Hibernate, REST, Kafka, Kinesis, AWS (EKS, ECS/Fargate, EC2, Lambda, Step Functions, EventBridge, S3, RDS, DynamoDB, ElastiCache, Route 53, ALB/NLB, CodePipeline/CodeBuild/CodeDeploy), Terraform, CloudFormation, Docker, Git/GitHub, GitHub Actions, Jenkins, SonarQube, Dynatrace, Mezmo (logDNA), Postman, Angular 11, HTML5, CSS3, TypeScript, JSON.

Client: Zoho, Chennai, India.

Jan 2018– May

2021 Role: Java Developer

Responsibilities:

- Built RESTful microservices with Spring Boot using IOC/AOP, Spring Security, JPA/Hibernate, and declarative transactions on Java 7.
- Broke a legacy monolith into modular microservices; designed domain models, repositories, and service layers; wrote JUnit tests.
- Implemented SOAP integrations with JAX-WS where required (login/auth, credit reports, applicant data).
- Consumed/processed async workflows via JMS; wrote message-driven beans to handle queue traffic reliably.
- Designed and deployed AWS CloudFormation stacks (JSON) and wired them into Jenkins pipelines to ship microservices.
- Managed build and release with Maven and Jenkins; maintained global build infrastructure and versioning policies.
- Delivered front-end features with AngularJS (custom directives, services) plus HTML5/CSS3/jQuery; supported legacy JSF/JSP screens.
- Built and hosted Node.js Web APIs on load-balanced instances; added search features with AngularJS + Node.js.

- Created secure API clients and service layers; implemented validation on both UI and server sides.
- Used Hibernate/JPA for persistence and Spring Data for repositories, optimized queries and transaction boundaries.
- Deployed apps to Apache Tomcat and IBM WebSphere; implemented centralized logging with Log4j.
- Worked in Agile teams and integrated with a CMS for workflow and content versioning.

Environment: HTML5, XHTML, CSS3, JavaScript (ES6+), AngularJS, React, jQuery, AJAX, JSON, Bootstrap; Node.js (npm), Express; Git, Jira, Visual Studio; Java/J2EE (Spring 3.x/Boot, Struts, EJB, Servlets/JSP, JDBC, JNDI, JavaMail, JavaBeans, multithreading); Web Services: REST, SOAP (JAX-RS/JAX-WS), XML, XSD, XSLT, XML parsers (DOM, SAX), JAXP, JAXB; Build/Testing: Maven, JUnit, PowerMockito, Log4j; Databases: Oracle, Sybase (SQL, PL/SQL); App Servers: Apache Tomcat, JBoss/WildFly

Client: Global Soft, India

Jun 2015 – Dec 2017

Role: Java Developer

Responsibilities:

- Partnered with BAs to refine requirements; produced URD/HLD/LLD and UML use-case/sequence diagrams.
- Analyzed functional/technical specs and called out gaps and edge cases.
- Built small features and bug fixes in Java/Spring; wrote JUnit tests and updated Maven builds.
- Consumed SOAP services with JAX-WS; generated JAXB bindings; maintained XML/XSD/XSLT transforms.
- Helped configure logging with Log4j and deploy builds to WebSphere/Tomcat in dev/QA.
- Reviewed peers' code with a checklist; logged defects in Jira and verified fixes.
- Mapped data flows end-to-end and created test data to support QA and UAT.
- Reported progress and risks to the lead and client POC; jumped on calls for clarifications.

Environment: Java (JDK 6–8), Spring, Hibernate, Maven, JUnit, Log4j, JAX-WS/SOAP, XML/XSD/XSLT, Oracle, WebSphere/Tomcat, Eclipse/IntelliJ, Jira, Git/CVS.
