

Anusha Chigurupati

Frisco, Texas | - 945 3645 | Ch9.Anusha@gmail.com

SUMMARY

Accomplished IT professional with 10+ years of experience as a DBA specializing in Db2 LUW and Db2 for z/OS. Proven ability to manage large-scale database environments, lead DB version upgrades, implement high-availability solutions, and optimize performance. Adept in cloud platforms, DevSecOps, and agile methodologies. Strong collaborator with a focus on continuous learning, execution excellence, and problem solving. Has extensive experience with Db2 versions 10.x, 11.1, and 11.5, including installations, configurations, fix pack installations, upgrades, and migrations. Is proficient in database performance tuning, troubleshooting, and maintenance, with strong knowledge of utilities such as db2diag, db2pd, db2dart, db2mtrk, and db2top. Demonstrated expertise in backup and recovery strategies, including redirect restores, rollforward recovery, and HADR setup and failover management. Solid understanding of DB2 security practices and capacity management, with hands-on experience in managing table spaces, creating database objects, and implementing replication using federation. Developed and optimized complex SQL queries and stored procedures for high-volume batch and online processing, and integrated Db2 z/OS logic with COBOL and Java applications.

SKILLS

- Db2 LUW (10.x, 11.1, 11.5) Installation, Configuration & Maintenance
- DB2 for Z/OS v11.1, v12.1, v13.
- DB2 Upgrades, Migrations, Fix Pack Installation
- Backup & Recovery (Online/Offline, Redirect Restores, Rollforward)
- Performance Tuning, SQL Optimization, Capacity Management
- SQL Development, Stored Procedures, DDL Management
- SSL Configuration, DB2 Security (Auth, Roles, Privileges)
- Utilities/Tools: SPUFI, QMF, DSNUTILB, UNLOAD/LOAD, REORG, RUNSTATS, COPY, RECOVER
- Security: RACF, ACF2, Top Secret
- Azure Cloud, DevSecOps Practices, Agile Methodologies
- SQL Server, Windows Server
- Monitoring: SQL Monitor, Splunk, AppDynamics
- Tableau Administration
- Incident/Change Management, CAB Participation
- HADR Configuration & Failover, Federation Replication
- Team Collaboration, Execution & Delivery, Growth Mindset

PROFESSIONAL EXPERIENCE

CTO DATABASE ENGINEERING FIFTH THIRD BANK, Cincinnati

08/2025 – Till Date

The project at **Fifth Third Bank** involved performance optimization and SQL tuning for critical DB2 databases running on IBM Z/OS mainframes. As part of the infrastructure modernization and efficiency initiative, the objective was to enhance database performance, ensure high availability, reduce CPU utilization, and improve response time for mission-critical applications including financial transactions, batch processing, and reporting systems.

The DBA team played a key role in identifying inefficient SQL queries, optimizing access paths, and collaborating with application development and systems teams to implement best practices for DB2 performance tuning and database maintenance.

- Analyzed and tuned high CPU-consuming and long-running SQL queries.
- Used EXPLAIN and PLAN_TABLE to evaluate access paths and optimize index usage.
- Rewrote inefficient queries and worked with developers to enhance SQL code.
- Recommended and implemented index strategies to reduce full table scans.
- Monitored access path changes during DB2 version upgrades and application releases.
- Ensured RUNSTATS, REBIND, and PLAN management were aligned with optimization goals.
- Leveraged performance tools (e.g., Mainview, OMEGAMON, CA Detector) to monitor real-time DB2 activity.
- Investigated locking issues, deadlocks, and thread waits to improve concurrency.
- Provided recommendations to reduce CPU and elapsed time for batch and online processes.
- Maintained database objects (tablespaces, indexes, views, triggers) and ensured their availability.
- Performed REORG, RUNSTATS, and COPY operations during maintenance windows.

- Automated and optimized utilities using JCL and scheduler integration.
- Worked with application teams, QA, and systems programming for performance testing.
- Documented tuning recommendations, before-and-after performance metrics, and best practices.
- Participated in change control meetings and production readiness assessments.

Senior Professional Operations/DBA
Database Administrator – Db2 LUW & z/OS
KYNDRYL Solutions Private Limited (IBM)
Client: Cooperators Group Limited

12/2021 – 08/2025

The Co-operators Group Limited (CGL) is a Canadian owned and co-operatively run business and a national insurance and financial services provider.

- Installed, configured, and maintained Db2 for z/OS environments across development, test, and production systems.
- Managed database objects including tables, tablespaces, indexes, views, and buffer pools.
- Tuned SQL queries and stored procedures for performance improvement using EXPLAIN, PLAN_TABLE, and IBM optimization tools.
- Supported application teams by reviewing and optimizing embedded SQL in COBOL and Java programs.
- Executed REORG, RUNSTATS, and LOAD/UNLOAD utilities for space and performance management.
- Set up and maintain database backups and point-in-time recovery using Db2 utilities and system-level backups.
- Participated in disaster recovery planning, HADR, and system failover testing.
- Maintained data security and access control policies, including RACF user management and privileges.
- Implemented and managed data replication and data sharing in a multi-member Sysplex environment.
- Created and maintained documentation for database builds, upgrade plans, and standard operating procedures.
- Monitored system health using OMEGAMON, BMC Mainview, or CA Insight, and resolved alerts proactively.
- Participated in changing control processes, including creating RFCs, attending CAB meetings, and applying production changes with zero downtime.
- Administered Db2 for z/OS subsystems supporting mission-critical applications with 24/7 uptime requirements.
- Performed buffer pool tuning and archive log management to optimize throughput and space usage.
- Implemented system and application checkpointing for restart logic in high-volume batch environments.
- Created and maintained DB2 catalog statistics and advised developers on index design.
- Provided on-call support and resolved P1/P2 production incidents as per SLA.

Database Administrator – Db2 LUW & z/OS
KYNDRYL Solutions Private Limited (IBM)
Client: Economical Insurance

01/2019 – 11/2021

Economical is one of Canada's leading property and casualty (P&C) insurance companies.

- Actively worked on DB2 migration from 10.5 to 11.1 & 11.5 to V12.1 versions.
- Change requests for production and changes will be applied.
- Managed database user privileges (granting & revoking permissions).
- Promptly acknowledged the incidents and worked on tickets.
- Looked at the Automation db2diag.log mails and notify log for any errors and resolving them.
- Data Maintenance activities: Performed database runstats, Reorgchk and Reorg.
- Troubleshot database issues using db2diag, db2pd, db2mtrk, Snapshot monitors and Event monitors.
- Verified Daily Builds on server.
- Implemented Backup and Recovery Strategies.
- Movement of data using import, export and load utilities.
- As per Application team request, prepared DDL scripts and DML scripts.
- Scheduled DB Maintenance scripts using Cron Jobs on AIX
- Data Maintenance activities: Performed database runstats, Reorgchk and Reorg.
- Managed file system space alerts.
- Managed the storage, allocating enough space for the database.
- Installation, configuration of DB2 V10.5 and V11.1 databases on AIX operating system.
- Creation of databases, Table spaces as and when requested by applications team.
- Created Instances and databases in test environment.

Database Administrator – Db2 LUW & z/OS

KYNDRYL Solutions Private Limited (IBM)**Client: Suncor****01/2016 – 12/2019**

Suncor Energy is a Canadian integrated energy company based in Calgary, Alberta.

- Actively worked on DB2 migration from 9.5 to 9.7 & 10.1 versions.
- Change requests for production and changes will be applied.
- Managed database user privileges (granting & revoking permissions).
- Promptly acknowledged the incidents and worked on tickets.
- Looked at the Automation db2diag.log mails and notify log for any errors and resolve them.
- Data Maintenance activities: Performed database runstats, Reorgchk and Reorg.
- Troubleshoot database issues using db2diag, db2pd, db2mtrk, Snapshot monitors and Event monitors.
- Administered Db2 for z/OS databases, including object creation, tablespace/index management, backup/recovery, and buffer pool tuning.
- Developed and optimized complex SQL queries and stored procedures on IBM Db2 for z/OS for high-volume batch and online processing.
- Integrated Db2 z/OS database logic within COBOL and Java applications, ensuring high performance and compliance with mainframe standards.
- Worked in a high-availability Db2 for z/OS environment supporting 24/7 banking applications with strict SLAs and audit compliance.
- Verified daily builds on server.
- Implemented Backup and Recovery Strategies.
- Movement of data using import, export and load utilities.
- As per Application team request prepared the DDL scripts and DML scripts.
- Scheduled DB Maintenance scripts using Cron Jobs on AIX.
- Data Maintenance activities: Performed database runstats, Reorgchk and Reorg.
- Managed file system space alerts.
- Managed the storage, allocating enough space for the database.
- Installation, configuration of DB2 V10.5 and V11.1 databases on AIX operating system.
- Created databases, tablespaces as and when requested by applications team.
- Created Instances and databases in test environment.

EDUCATION

Bachelor of Engineering JNTU University, India

CERTIFICATIONS

IBM Certified Database Administrator – Db2 LUW

Microsoft Certified: Azure Fundamentals

ITIL Foundation
