PERSONAL PROFILE

With over 30 years of experience as a software developer, I have extensive expertise in developing and implementing systems across various hardware platforms and operating systems. I am skilled in a broad range of software applications, including web-based, financial, manufacturing, engineering, and e-commerce systems. I have successfully led diverse, nationwide teams to deliver complex software and web-based projects, enhancing internal service delivery, reliability, and security functions. I have a proven track record of meeting project deadlines despite unforeseen challenges. A consummate team player, I am flexible, dedicated, and committed to seeing every project through to completion.

Throughout my career, I have also served as a lead and manager, responsible for guiding teams of programmers and analysts. Additionally, I have been involved in evaluating software packages and overseeing hardware/software purchasing decisions.

CORE COMPETENCIES

- | | | | |
|--|----------|-------------|--------------|
| • Java | • C | • C++ | • Cobol |
| • WebSphere | • JBoss | • Tomcat | • Unix/Linux |
| • Web Services | • Oracle | • MySQL | • XML |
| • Object Oriented
Design and
Development | • CORBA | • ClearCase | • Subversion |

WORK EXPERIENCE

The Boeing Company

System Design and Integration Specialist 8/2014 – 9/2024

- Responsible for managing information security systems at Boeing, specializing in multifactor authentication systems.
- Experienced in implementing RSA SecurID products for multifactor authentication.
- Proficient in Java development, integrating multifactor authentication RESTful APIs with custom applications.
- Implemented an external application to provide current and retired Boeing employees with access to internal portal resources.
- Experienced in working with security enclaves to safeguard information security resources.

Snoqualmie Tribe

IT Manager, 6/2013 – 8/2014

- Responsible for budgeting and planning the IT infrastructure for the Snoqualmie Tribe.
- Manage IT support personnel.
- Maintain IT infrastructure at 8 locations.
- Leading team in upgrading IT infrastructure due to aging equipment and services including:
 - Migrated to Microsoft's cloud-based email service
 - Added storage area network (SAN) and network attached storage (NAS) to the server infrastructure

- Upgraded servers, implemented RAID-5 disk technology and implemented virtual servers using VMware
- Implemented tape backup and offsite storage solution

The Boeing Company

Boeing Enterprise Supplier Tool – *Lead Software Developer*, 3/2008 – 5/2013

- Responsible for the development and maintenance of Boeing's supplier management systems on multiple Java based platforms - web services and web-based UI systems running on WebSphere and JBoss.
- Successfully led a virtual team (ten members, located in California, Missouri, Florida and Washington) on multiple software development projects for Boeing, with the following highlights:
 - Migrated to new redundant servers for application reliability.
 - Implemented a complex project interfacing with an outside vendor.
 - Decreased our SOX vulnerability with PII (personally identified information) data.

Boeing P-8 Program – *Lead Software Developer*, 11/2005 – 3/2008

- Successfully guided a team in the communications sub-system area for the Multi-Mission Maritime Aircraft (MMA) project with on time completion of two major software development iterations for MMA.

Connexion by Boeing – *Lead Software Developer*, 7/2003 – 11/2005

- Responsible for leading an applications development group in creating the following major applications: User account registration; account maintenance; service login and data delivery. These applications were successfully delivered for Connexion's initial service date on the first Lufthansa Airlines flights.

The Boeing Company – *System Architect, Development Lead*, 6/2001 – 7/2003

- System architect and development group Lead for a set of e-commerce applications that connected Boeing's purchasing systems to external suppliers.
- Coordinated development tasks, and mentored new developers.
- Instituted standard practices within the team.
- Provided architect support for future development projects within the organization.

Vitessa Corporation Seattle, Washington

Senior Software Engineer & Technical Manager, 5/1999 – 4/2001

- Promoted to manager to oversee a group of seven engineers supporting a web-based merchandising portal application that provided merchants access to products offered by multiple suppliers.
- Senior Software Engineer, specializing in e-commerce, successfully designed, developed and implemented the following software components:
 - A U.S. and Canadian address validation schema using the Common Gateway Interface (CGI).
 - A Java interface to HNC's eFalcon product, used for credit card fraud detection.
 - A custom gift certificate service, which allows customers to purchase gift certificates.
 - A service to execute electronic check payments. Written in Java using CORBA.
 - A U.S. and Canadian sales tax implementation using Java and JNI (Java Native Interface).
 - Refactored a credit card service, creating a common Java interface to two external payment processors.

EDUCATION

Seattle Pacific University - Master of Information Systems Management (MS-ISM)

Seattle University - Master of Business Administration (MBA)

University of Washington - Bachelor of Arts in Economics
