

**Paul Stewart**  
**4320 NE 54th Avenue, Portland, OR 97218**  
**Cell: 617.697.4119 | Email: paul@arckinteractive.com**

## **SUMMARY**

Detail-oriented and meticulous Chief Technology Officer with 15 + years of experience in delivering scalable SaaS platforms, developing AI-powered solutions, and designing HIPAA compliant systems. Proven track record of reducing deployment times by 30%, mentoring junior developers, and implementing CI/CD pipelines. Skilled in Agile product delivery, backend architecture, system administration, devops, managed hosting, and systems integration.

## **FUNCTIONAL CORE COMPETENCIES**

- Agile Program & Delivery Management
- SaaS Architecture & Multitenant Systems
- Microsoft 365 / Azure AD / Intune Administration
- Secure Systems Design (HIPAA, ADA, FERPA, SOC 2, OWASP)
- API Design, GraphQL & Systems Integration
- AI/ML Toolchains, Model Integration & Annotation Ops
- CI/CD Pipelines, DevOps, GitHub Actions, IaC
- Cloud Infrastructure (AWS, GCP, Azure, Heroku)
- ERP, CRM & Fundraising Systems (Salesforce, NeonCRM)
- Frontend Frameworks & Component Systems (React, Vue, Storybook)
- Cross-Functional Team Leadership & Staff Development
- Technical Discovery, Road mapping & Estimation
- Customer Research, UX Collaboration & Stakeholder Engagement
- Business Development & Marketing Automation
- Business Process Automation
- Complex Systems Integration

## PROFESSIONAL EXPERIENCE

### ARCK INTERACTIVE, INC.

September 2010 – Present

#### Founder & Principal / CTO

Founded and scaled a full-stack digital product consultancy serving global clients across nonprofit, education, healthcare, and enterprise SaaS. Directed the full lifecycle of dozens of product engagements—combining technical architecture, UX strategy, and Agile delivery with executive oversight and stakeholder management.

- **Early Infrastructure Venture (pre-Arck):** Bootstrapped a bare-metal hosting company with my partner using refurbished Dell servers, NATS messaging for orchestration, GlusterFS for distributed storage, and custom offsite replication pipelines. Engineered full power and hardware redundancy across racks, scaling to serve ~100 clients on-premise. As the cloud market matured, migrated customers to a hybrid AWS architecture using custom AMIs and automated instance deployment pipelines tailored for a popular CMS. Successfully exited via a \$1M acquisition by one of our hosted CMS customers, who leveraged our automation platform to power their SaaS growth.
- Developed 100+ custom SaaS applications for startups, entrepreneurs, and software companies—accelerating development velocity and enabling rapid go-to-market execution.
- Architected modular multi-tenant SaaS systems using Laravel, React, AWS, and GPT-based AI tooling.
- Built real-time data ingestion pipelines using Kafka/Kinesis to process telemetry and analytics events.
- Integrated Stripe, Braintree, and usage-based billing systems with full PCI compliance.
- Created backend tools to evaluate AI/LLM outputs, classify content, and summarize data programmatically.
- Mentored remote developers, conducted code reviews, and enforced CI/CD best practices.
- Delivered SOC 2-aligned infrastructure and DevOps for Monolith’s digital ecosystem, integrating fundraising, analytics, and CRM tools like Zoho and Mailgun.
- Oversaw all stakeholder engagement, budgeting, client success, and pricing strategy, contributing to Arck’s long-term client retention and growth.
- Scaled a globally distributed team of engineers and designers, building custom Laravel/Vue/Statamic applications optimized for extensibility and security.

**Key Clients:** Infusionsoft Corporation, The World Bank, Botworx.AI, Executive Networks Inc., Gatorade/PepsiCo, University of Alaska, John Wiley & Sons Publishing.

**Chenega Corporation (U.S DOT)****August 2003 – January 2010****Senior Full-Stack Developer / Architect**

Evolved into a federal solutions architect, leading design and delivery of secure, high-compliance systems at national scale. Orchestrated parallel development streams while embedding Agile practices in traditional waterfall environments.

- Architected substance abuse oversight (SAMO) and runway safety intelligence (RISC) platforms—federal compliance systems supporting national transportation safety mandates.
- Introduced CI/CD pipelines and automated testing for DOT web platforms, pioneering DevOps practices years before they were widely adopted.
- Directed technical teams, enforced coding standards, and mentored junior developers while ensuring Section 508, FISMA, and NIST 800-53 compliance.
- Built resilience and audit readiness into every system, aligning with federal oversight while improving stakeholder confidence and system uptime.

**Tufts Medical Center (Perot Systems)****March 2002 – August 2005****Web Developer / Application Analyst**

Transitioned from infrastructure to application development, building web platforms that unified hospital operations, clinical systems, and compliance requirements. Introduced custom software solutions to a traditionally vendor-driven environment, accelerating digital transformation.

- Designed and deployed a HIPAA-compliant intranet CMS serving 85+ departments with secure role-based workflows—precursor to multi-tenant SaaS governance patterns.
- Built integrations between Lawson ERP, EHR, and custom intranet tools, eliminating manual reconciliation and strengthening data integrity.
- Engineered HL7 data normalization and interface tools to improve interoperability across clinical systems, aligning with federal standards.
- Delivered executive dashboards for project governance and IT change control, reducing reporting cycles from weeks to days.

**Tufts Medical Center (Lifespan Inc.)****January 1999 – March 2005****Desktop Engineer / Systems Administrator**

Laid the technical foundation for enterprise-scale IT operations, supporting 1,000+ endpoints across clinical, surgical, and administrative units in a 24/7 hospital environment. Built credibility as a hands-on engineer bridging healthcare delivery with secure IT infrastructure.

- Standardized enterprise workstation imaging and Active Directory provisioning, enabling consistent compliance across a high-regulation environment.
- Partnered with networking/security teams to pioneer encrypted remote access and workstation policies—early groundwork for secure distributed teams.

- Acted as a technical liaison between physicians, administrators, and IT leadership, translating mission-critical needs into actionable system improvements and improving SLA resolution rates by 30%.
- Designed and maintained VLAN segmentation and redundant switching configurations to isolate sensitive clinical networks and minimize downtime risk.
- Optimized network performance for imaging and surgical departments, reducing latency in PACS/EHR systems and ensuring reliable access to mission-critical data.

## TECHNICAL TOOLKIT

### Languages & Frameworks:

Laravel, Node.js, Python, PHP, JavaScript, TypeScript, .NET, React, Vue.js, Statamic, HTML5, CSS3

### DevOps & Infrastructure:

AWS, Azure, GCP, Docker, Heroku, Cloudflare, GitHub Actions, Jenkins, CircleCI, CI/CD Pipelines, Infrastructure as Code (IaC)

### APIs & Integration:

RESTful APIs, GraphQL, HL7, FHIR, OAuth2.0, SSO, Webhooks

### Data & Databases:

MySQL, PostgreSQL, Redis, MongoDB, Elasticsearch, Snowflake

### Security & Compliance:

HIPAA, SOC 2, ADA, GDPR, FERPA, OWASP Top 10, Microsoft Intune, Azure AD, M365 Security

### Tooling & Collaboration:

Jira, Trello, Zeplin, Figma, Postman, ProductBoard, Slack, Confluence

### AI/ML & Automation:

LLM Data Annotation, Prompt Engineering, OpenAI, Snorkel Flow, AI-assisted QA, Model Evaluation

## EDUCATION

Bachelor of Science, 2003 – Multimedia Studies & Computer Engineering, Northeastern University

Master's Work, 2003 – Communication Protocols and Internet Architectures, Harvard Extension School

## REFERENCES

HENRY DITTMER ([henry@sensible-leadership.com](mailto:henry@sensible-leadership.com))

To whom it may concern,

It's a pleasure to recommend Paul Stewart for any senior leadership role. I've collaborated with Paul during a crucial phase of a client's transformation initiative. I brought him into the project based on a trusted recommendation, and it turned out to be one of the most strategic decisions we made.

With decades of experience in technology and business, I was struck by Paul's blend of technical expertise and strategic foresight. He has a rare ability to convert vision into execution, modernizing how teams operate while ensuring long-term sustainability. Paul introduced agile methodologies that allowed us to shift from rigid development cycles to rapid, iterative delivery. This significantly accelerated our ability to deliver value.

Paul's strength lies in balancing big-picture thinking with detailed execution. He's analytical, intuitive, and responsive to shifting priorities. He streamlined processes, introduced scalable architecture, and guided the team through continuous improvements—all with unwavering integrity and transparency.

As a leader and consultant, Paul communicates clearly, mitigates risks early, and inspires high performance. He led a diverse, distributed team with empathy and precision, aligning technical contributors and stakeholders alike. Every milestone was delivered reliably, and the results surpassed expectations in terms of usability, durability, and strategic value.

Paul leads with a strong sense of purpose. He brings intellectual clarity and emotional intelligence to every engagement. Any organization would benefit immensely from his leadership, systems thinking, and commitment to meaningful outcomes.

Please feel free to contact me directly for more insight.

Sincerely,  
Henry C. Dittmer

BEN TOMLIN ([btomlin@uw.edu](mailto:btomlin@uw.edu))

I'm pleased to share my wholehearted recommendation of Paul Stewart.

I originally worked with Paul at the intersection of technology and learning innovation. At a time when digital collaboration was just beginning to take shape, Paul helped us envision and execute an ambitious solution that merged content, community, and utility in a single, intuitive system. What impressed me most was Paul's ability to deeply understand the people at the center of the work. He actively engaged all stakeholders—whether strategic leaders or frontline users—to co-design meaningful outcomes. He guided us through choices with clarity, balancing bold innovation with practical delivery.

The result was something visionary, built well before many of today's mainstream tools emerged. And yet Paul's strength wasn't just technical—it was his commitment to solving real-world problems and advancing the mission through design and engineering. Even as our careers progressed, I've remained inspired by Paul's foundational approach: engage thoughtfully, build iteratively, and measure success by impact. The principles I observed in those early years have clearly endured in the way he continues to lead teams and deliver change across sectors.

I hold Paul in the highest regard as an innovator, mentor, and leader. Any forward-thinking organization would benefit greatly from his presence.

Warmly,  
Ben Tomlin  
Senior Director, Communications

To whom it may concern,

It's my pleasure to offer this recommendation for Paul Stewart, whom I've had the opportunity to work with closely over the past several years on the development and continuous evolution of a specialized digital platform.

From the beginning, Paul brought more than just technical expertise—he approached the work as a strategic partner. He took time to understand the needs and dynamics of our clients and

end users, and he translated that understanding into a platform that was not only robust and secure, but remarkably intuitive. Paul was instrumental in shaping a product that handles complex workflows and permissions without ever losing sight of user experience.

One of the things I appreciate most about Paul is his ability to manage complexity with calm clarity. He leads with thoughtfulness, listens intently, and never loses sight of what success looks like for the people on the other side of the screen. Under his leadership, projects were delivered on time and under budget, and always with scalability and adaptability in mind.

Beyond the technical scope, Paul has been a valued thought partner as our work has grown. Whether navigating tight timelines or evaluating new opportunities, I've consistently relied on his clear thinking, grounded perspective, and collaborative spirit. His contributions have made our work stronger and more resilient.

Any team would benefit from Paul's ability to turn ambiguity into action and vision into results. I recommend him enthusiastically.

Warm regards,

Shannon Berg

TYSON BROWN ([brown.tyson@gmail.com](mailto:brown.tyson@gmail.com))

It is my pleasure to recommend Paul Stewart for senior leadership and strategic delivery roles. I worked closely with Paul in my capacity as a Product Manager, where he served as a consulting partner and development lead to help us drive and deliver compelling capabilities to our customer base.

When we faced the challenge of building a new system under a short timeline and with high technical expectations, Paul's team stepped in and delivered beyond expectations. He quickly absorbed the complexity of our business problem and translated it into a thoughtful, strategic technical solution. He worked with us from discovery through deployment, balancing technical feasibility with user-centric design and organizational priorities.

Paul's leadership was crucial to the success of this initiative. He assembled and guided a hybrid team of frontend, backend, and QA engineers who worked in close collaboration with our in-house teams. His calm and focused presence helped maintain momentum through tight deadlines, shifting requirements, and technical unknowns. The product we launched achieved exceptional adoption rates and remains a critical, high-use capability today.

As a development manager, Paul consistently solved difficult problems with elegance and empathy. He is fluent in both the language of business and technology, serving as a vital bridge between strategic goals and technical execution. His standards for quality and innovation were evident in every deliverable.

Equally important, Paul led with integrity and transparency. He built trust quickly with our teams and fostered a culture of accountability within the distributed team he managed. His hybrid-first team structure and leadership approach predated current remote trends by over a decade, serving as a model for high-performing global teams.

Paul brings strategic thinking, operational discipline, and a collaborative spirit to every engagement, making him a valuable asset to any organization.

Please feel free to contact me directly should you wish to discuss his candidacy further.
