

Michael J Maksimik

Title: Senior Consultant

Name: Michael Maksimik

Cellular: 815-514-6525

wolfvikingur@comcast.net

Updated: September 2025

* * Confidential * *

This engineer has over 35 years hard experience in a wide range of computing environments and projects. He operates as a consultant to many clients requiring day-to-day management of system backups, connectivity, internet remote access, and secure remote access to midrange system. Michael has architected client-server applications in Java, C and mixed legacy environments, with relational database access. He has also worked with Web Services, XML, and Business-to-Business communications. Michael manages the entire project, from the architecture of the network, to the communications objects, database structure, authorities and server environments. Currently, Michael is working on custom Java data mover applications. Michael has several years experience with Linux, including iSeries Linux. He produced and sold a commercial MIDI interface and sequencer, MIDI Master 99, written entirely in assembly language.

This consultant also produced a sector-caching BIOS for the Western Horizon Technology (San Jose, CA) SCSI interface card written entirely in assembly language, and wrote a low-level MFM Hard Disk format utility for Cecure Electronics (Milwaukee, WI), CFORM. While in college he ran his own PC Bulletin Board Service, and co-developed a terminal emulator entitled PORT, (S & T Software, Port Washington, WI), and authored his own SCSI-based Tape Backup software in C and Assembly Language.

Michael also works on Personal Computers, Networks, servers, firewalls, communications hardware, and peripherals such as printers and scanners. Work on this area includes removing viruses and spyware, optimizing network performance, setting up Virtual private networking for secure remote access to private office networks from home or travel, securing Email systems, and installing application software, fixes and updates. Michael has extensive experience with installation, configuration of the Microsoft Windows franchise of operating systems, from client workstations to servers. KVM/QEMU, VMWARE and VirtualBox are environments which Michael has been using to consolidate servers, and provide legacy application support to newer client workstations.

Michael owns an IBM Power8 system which serves as a sandbox and private client cloud for offsite replication of client IBM systems. Michael Manages Azure accounts for several clients, including microsoft Exchange online, and has set up Multifactor authentication using Azure for client vpn remote login using their own firewall hardware and vpn client. Michael currently manages remote client networks remotely, providing software and hardware support as needed, and occasional onsite support as needed.

Expertise

Education

Bachelor of Science - Computer Science, Illinois Institute of Technology, graduated 1993, named to Dean's List.

Certifications

IBM Certified Specialist

Database

Embedded SQL. IBM AS/400 Databases; flat files; DB2; SQL; ODBC/JDBC; Microsoft DAO; Microsoft Access; Microsoft SQL server; AS/400 Query Manager; AS/400 IDDU; Lotus Domino Database design.

Hardware

VMWARE and virtual servers. All types of PC and computer hardware; including circuit board design. Android phone, tablet and kiosks (setup, deploy, and custom programming) , Android and Windows CE-based kiosks, Include EPROM programming; PAL/GAL programming. SCSI hardware (all types); USB hardware (all types); IBM NetVista and Neoware Thin Clients; Tape Drive Arrays; LAN switches; LAN Hubs; LAN/WAN routers; IBM 5294/5394/5494 workstation controllers; BOS eTwinax Controller; Perle 394/494/594 controllers; CSU/DSU for Frame Relay; Cisco Routers & PIX firewall; Linksys routers; Netopia Routers; DSL routers; Cable Modems; barcode readers and barcode printers; Phone modems of all speeds and standards; V.24/V.35 interfaces; PC Hardware (ISA/PCI; VESA; Microchannel; plug/non-plug&play) Quarter -Inch Tapes; 4mm; 8mm; ½ inch open reel; Magstar and DLT tapes and drives. 53C80 SCSI processor; TMS9902 UART; Standard Microsystems 9342 HFDC; Western Digital 1772 FDC; Yamaha V9938 Video Processor. IBM Laser and Dot Matrix Printers; iSeries Integrated PC Server; iSeries Linux (32 and 64 bit); iSeries Partitions. iSeries Hardware Management Console (HMC), Dell server based Linux, Dell server Remote Management via iDRAC. Disk and SSD Partition management, replication, and repair.

Network

Internet

VPN. All types of internet connectivity. Vast knowledge of TCP/IP standards and theories. Extensive programming knowledge and Router experience. Virtual Private Networking (VPN) IPSEC; Firewalls (IBM AS/400; IBM SecureWay; Raptor; RaptorMobile; Cisco PIX 4.x & 5.x; Injoy Firewall; Internet Gate; Safenet SoftPK); AS/400 SLIP & PPP; AS/400 Ethernet & Token Ring TCP/IP; AS/400 Host Servers; PC Host Server Daemons.; Custom programs in Java; C; and script to communicate over the internet with host servers; database servers; and other custom programs on heterogeneous systems. Microsoft server based VPN. Virtual machines under VMWARE, Virtual Box and QEMU/KVM on Linux. Custom built Linux/Ubuntu firewalls with IPSEC VPN for clients. Management of client cloud on Microsoft 365/Azure.

Languages

C; .NET C#, Visual Basic (Legacy and .NET), Java SE,Eclipse, Android Developer Kit, Rational Application Developer (Java/Visual); Visual Age for Java; Visual Basic; LotusScript; TMS9900/9995 Assembler; 68000/68010 Assembler; VAX 3600 Assembler; IBM system I ILE integrated language environment; IBM REXX, AS/400 CL; RPG IV; RPG II; System/36 OCL; AS/400 ILE C; Lotus C API; DOS and OS/2 batch (all versions); RJE-JCL; REXX; Modula-2; Perl; JavaScript; HP PCL 3, PCL 5; Domino server-side agents in Java; AS/400 Toolbox for Java; SWING; Working familiarity with Fortran-IV and Cobol (AS/400 ILE Cobol), Android Java. Eclipse java development, including visual development with WindowBuilder. Website (HTML) maintenance using Visual Studio Code.

OS Experience

OS/400 V1R1 thru V7R5; S/36 SSP (5.1 thru 7.1); Linux, VAX/VMS; MSDOS/PCDOS (1.2 thru 2000); OS/2 2.1; OS/2 Warp 3 & 4; Windows 3.1; Windows 95; Windows 98; Windows NT 4.0 Workstation; Windows NT 4.0 Server; Windows NT 4.0 Terminal Server; Windows 2000 Workstation; Windows 2000 Server Advanced/ Professional; Windows 2000 Terminal Server, Windows Servers (2003/2008/2012/2016/2019/2022), Windows Workstations (7/vista/8/8.1/10). OS/400 API; OS/400 2PTF installation; OS/400 installation; OS/400 Logical Partition configuration & resource management; Integrated PC Server installation; Hard Disk Array formatting and partitioning; Installation of operating system and Fix Packages; configuration of OS-Specific driver installation and update (PCI; VESA; ISA; MicroChannel; proprietary). Novell Netware 4.x; 5.x.

protocols

SDLC; TDLC; HDLC; SNA; APPC/APPN; TCP/IP; Async; SLIP/PPP; SCSI protocols (1 & 2); MIDI 1.0; SSL; Java Security Model; Hayes AutoSync; Ethernet & TokenRing framing standards; NetBIOS; NetBIOS over TCP/IP. IPSEC (VPN), XML, SOAP, REST API connectivity and development

Software

Rational Developer for Power Systems/RDi 8/9, ECLIPSE Citrix Metaframe; Citrix Device Services; Lotus Domino; Lotus Notes; Visual Age for Java2.x/3.x; Visual Basic 5.0; Sun JDK; Sun StarOffice 5.1; Microsoft Office 4.x thru 365; Lotus SmartSuite; IBM NetworkStation Manager 1.3 & 2.1; Christopher & Associates Menu Management System; Christopher & Associates ICMS and PosPort (VISA/MC); InstallShield; Tivoli Storage Manager (TSM/ADSM); Cisco ConfigMaker.

Security

Generate/manage/renew digital certificates. Manage certificate stores. Set up SSL configurations for HTTP servers, (such as Apache), IBM Domino (HTTPS, IMAP, POP, SMTP SSL), Java SSL environment configuration.

Project Experience

For a Retail Store Chain

AuthServer, + PinPadBridge, a complete Java-based high-performance internet based point-of-sale credit card authorization and settlement system, WebFTP, a secure file interchange system for transferring secure data between the retail backend system and the remote website system for web-based storefront support. PriceChecker, a custom written Android tablet (with barcode scanner) application for deploy in retail stores as a price checking kiosk; Custom programming of file transfers/data uploads for UPS WorldShip software. Installation/configuration and remote management of all retail store cash register workstations, PIN pads, printers, cash drawers. Installation of IBM iSeries PTF packages and iSeries operating system upgrades. Installation of iSeries systems (from scratch). Rebuild/restore of iSeries systems due to catastrophic system failures.

For an investment

company

PriceManager (for daily stock/bond/option price updates; java and C# versions) , WebFTP (to run required daily file transfers to/from partner/government reporting firms), customized remote and local daily backup to private cloud (my own custom code). Installation of ibm iSeries PTF packages

*For a Truck
Service
Company and
sister Truck
Parts Company*

ProcSpools, a complete system for capturing specific spooled output, (invoices, quotes and statements), with lookup of customer information from within the spooled file itself, and automatic email to customer as PDF. Customized remote and local daily backup to private cloud (my own custom code). Installation of IBM iSeries operating system upgrades and ptf packages.

*For an
international
hose and seal
supplier*

MailJump, a custom written corporate email portal for IBM Domino. Custom font printing for MICR based magnetic toner laser printed checks. Custom barcode printing for sticky package labels.

*For a Police
Department*

MasterName and Citation (Police Record Management written in Java), JDBC, Microsoft SQL Server Designed, Managed, Engineered, and Installed project. Summary: Print and view historical police records, with Expunge added by court order. IBM Domino remote management. Microsoft VPN server configuration and management.

*For a
transportation
management
firm*

PopUp Messaging system, Java 1.1.8, implemented on IBM NetVista ThinClients and Personal Computers, Windows NT Terminal servers. Designed, Managed, Engineered and Installed project. Summary: Instant messaging using Domino Java Agent, and standalone Java GUI message send console. Corporate-wide, WAN-based communications. IBM domino and iSeries partition management, operating system installation and PTF installation, tape library management. System transport. Multi-site remote support and communications configuration and management.

*For a map
company*

MileMaker AS/400 Guide 16. Trip Routing software, providing truck travel routes. Written entirely in ILE C code, this program and database were converted from a 32-bit AIX shared-memory model to a 64-bit OS/400 RISC Data Queue-based Client-Server model. Total Code converted: 20,000 lines, project was delivered directly to clients from my desk. (Design/Engineered)

*For a law firm
and a trucking
company*

Co-authored the web-retrieval of TIFF images from the Magellan SpyWeb system on a backend AS/400 served through a front-end Domino Server, over the web, on an AS/400. Involved ILE C programming and debugging, custom interfacing with client-server (data queue) model, combining Lotuscript on Domino with AS/400 ILE C and Lotus C API to present clients with scanned images of their case files. Worked as one of a team of three on this project, my responsibilities were all the C programming and integration with the SpyWeb server and front End Domino Lotuscript. Also provided subsystem and memory pool setup, and command menus for managing the server system. (Design/Engineered). Created Java Agent to provide persistent session information and dynamic HTML within Domino to present images and indexes.

*For a video
production
company*

Interfaced front-end RPG with remote Paymentech Credit Card authorization system. Used ILE C to interface to RPG, and multiithreaded Java to communicate with a remote TCP/IP-based credit Authorization service. Uses Data Queues on a client-server model. Provided menus and utility programs, and Subsystem-based management of the Java code. Also instructed personnel on basic use of the program. (Design/Managed/Engineered)

*For a fulfillment
center*

Designed barcode download and layout utilities for iSeries, written in Java and ILE RPG. The project is designed to completely utilize the iSeries system, standalone, to download PCL barcode fonts to any PCL compatible printer. In addition, wrote code in ILE C to prepare a text string for CODE 128 ECC barcode generation, including checkdigit and character set selection.

*For an
agricultural
COOP*

Authored a scale-weight retrieval system in Java and C, using stub code to interface to legacy RPG applications. Used client-server design to communicate to network-based serial interface connected to truck scales, and a communications protocol to fetch weights on demand.
