Objective

Seeking a challenging environment calling for teamwork, this encourages continuous learning and creativity providing exposure to new ideas and stimulates professional growth.

Professional Summary

- Mulesoft and APIGEE Technical Expert with 15 years of experience, **6.5 years of API Management Experience - APIGEE**, 2+ years of experience with MuleSoft ESB, WPS and ODM and strong back end development.
- Experience in Developing API in APIGEE with OAuth2, SAML, JWT, PingFed and common policies.
- **Mulesoft Integration Solution Architect Level 1 Certified (2020)**
- RAML Certified
- MuleSoft Integration and API Management 3.8 Certified
- Experience on Designing RAML, Swagger and OAS 3.0.0
- Having working experience of CICD , Jenkins, kubernetes
- Experienced in leveraging RDBMS like Oracle, MySQL, DB2
- Good at Restful service development and API Development.
- Working experience on complete Project life cycle from Software Requirement Specification (SRS) to Operations and Maintenance.
- Experience in developing web applications using SOAP based Web services - SOAP, WSDL and JAX-WS and Restful Web Services – JAX-RS
- Experience in writing MUNIT test cases with Mockito and running the test suites and test coverage using EMMA tool.
- Experienced in testing the application using POSTMAN.
- Experience in tracking defects, issues, risks using JIRA
- Implemented SDLC methodologies including Waterfall, Agile, Kanban
- Experience in using version controlling systems like GIT, source tree, Visual source safe, RTC, Bitbucket and IBM Clear case.
- Good experience in Banking, Insurance.
- SCJP 5.0 Certified Professional.

IT Experience

Working as **Senior Associate** at Cognizant Technology Services from December 2018

Worked as AST at Tata Consultancy Services from January 2008 To November 2018

.

Education

M.C.A , K.L.N. College of Engineering, Madurai, 2007

B.Sc (Computer Science), P.K.N Arts and Science College, Thirumangalam, Madurai, 2004

Technical Skills

Languages	Java/J2EE
Technologies	APIGEE, MuleSoft, WPS, IBM MessageBroker, ODM, Java, JSP, webservices
Methodologies	Agile, SCRUM, Kanban, waterfall
IDEs	WID 7.0, RAD 7.0, RSA 7.0, JBuilder, Eclipse 3.0
DBs	Oracle9i/10g/11g
Source Control	Git, sourcetree2, BitBucket, RTC, ClearCase, Visual SourceSafe, PVCS
Application Servers	WAS 6.0/WPS 7.0
Testing Tools	Postman, Soup UI, JMeter
Coding Standards	Checkstyle
Utilities	Notepad++, Editplus, PL/SQL Developer, DB Visualizer

Projects Handled

GAIM, API Management, Gilead, USA

Dec 18 – till now

GAIM Platform facilitates the Gilead Organisation to APIfy the Internal systems in a secured way. Through GAIM APIGEE APIs are used to process the clinical details. APIGEE Edge Cloud is providing the API Proxy to backend rest service. APIGEE Edge is providing interface to backend soap service and exposed as Restful service.

Responsibilities:

- Involved in analysis, design, development, testing and Maintenance phases of Application.
- Adding User, Supporting the Developed APIs and fixing the issues.
- Involved in discussion with various stakeholders for API Spec
- Involved in designing Specs according to the TM Forum Format
- Involved in Mapping with XSLT from JSON to XML (SOAP)
- Involved in Exposing API with OAuth2, SAML, JWT, PingFed
- Involved in Code reviews and swagger walkthrough with BA's
- Worked in all the common policies
- Deployed APIs are tested using POSTMAN.
- Involved in Production Deployment and supporting the service for End to end call.

Role: API Integration Lead

Methodologies : Agile, SCRUM

Environment: Cloud, APIGEE

Software: JIRA, wiki, Bitbucket, APIGEE Cloud, swagger 2.0, OAS 3.0, Postman, VPN, AWS

Finnish Transformation, PI – Project Integration, Telia, Finland Jan 17 – Nov 18

Finnish Transformation is used to process the Orders and Billings. APIGEE Edge is providing the API Proxy to TIBCO Application. Existing TIBCO Application generally SOAP based service. APIGEE Edge is providing interface to TIBCO soap service and exposed as Restful service.

Responsibilities:

- Involved in Sprint Planning, Event Planning Requirements gathering, analysis, design, development, testing and Maintenance phases of Application. Implementing the project in agile methodologies – sprint & scrum.
- Involved in discussion with various stakeholders for API Spec
- Involved in designing Specs according to the TM Forum Format
- Involved in Mapping Design between API Specs TM Forum and SOAP Format request
- Involved in Developing APIs with Node.js and Java

- Involved in Developing API with Restful service expose
- Involved in Mapping with XSLT from JSON toXML (SOAP)
- Involved in Exposing API with OAuth2
- Debug the Production defects using the SPLUNK Logs
- Generating Custom Reports depends on Client business on time requirement
- Involved in Code reviews and swagger walkthrough with BA's
- Worked in all the common policies
- Deployed APIs are tested using POSTMAN.
- Involved in Production Deployment and supporting the service for End to end call.
- Developed application in Anypoint studio 5.4.3 IDE and used RAML 0.8 for generating Raml files.
- Involved in unit testing using JUNIT with Mockito, Integration testing and system testing.

Role: API Integration Developer

Methodologies : Agile, SCRUM

Environment: Cloud, APIGEE

Software: JIRA, wiki, Bitbucket, APIGEE Cloud, swagger 2.0, OAS 3.0, Postman, VPN, MuleESB

QBE Services, PI – Project Integration, Liberty Insurance, US Jan 2016 – Jan 2017

QBE Services is used to process the new Insurance Policy. QBE stands for Quote, Bind, Rate. In Quote user will give the details like vehicle/property details. In Bind company will calculate the premium for the agreement. In Rate final approval will be done.

Responsibilities:

- Involved in Sprint Planning, Event Planning Requirements gathering, analysis, design, development, testing and Maintenance phases of Application. Implementing the project in agile methodologies – sprint & scrum.
- Experience in MuleSoft Anypoint API platform on designing and implementing Mule APIs.
- Developed & consumed the web services using JAX-WS, WSDL, and SOAP.
- Developed application in Anypoint studio 5.4.3 IDE and used RAML 0.8 for generating Raml files.
- Involved in converting data formats such as XML, CSV, Java and JSON.
- Developed Restful web services using JAX-RS and JAX-WS tool.
- Used core java concepts like Collections, Generics, Exception handling to develop business logic.

- Involved in doing MUNIT testing.
- Deployed web services are tested using POSTMAN.
- Involved in unit testing using JUNIT with Mockito, Integration testing and system testing.
- Deployed the application in UNIX machine and used FTP to see the logs etc.
- Strong knowledge and hands on experience in documenting and designing RESTful API's as per RAML specification. Extensively used data weave expressions for transformations in Data weave.

Role: Integration Developer

Methodologies : Agile, Kanban

Environment: DB: DB2. Software: JIRA, wiki, Bitbucket, Java, EJB, **ESB Mule**, weblogic server, Jenkins

KX, Knowledge Exchange, AIG, US

Aug 2014– Dec 2015

KX is an Intranet Knowledge Exchange Tool. It can be used among employees to get the action taken on the same insurance type across other countries. Users can able to upload and view the documents from the portal.

Responsibilities:

- Creating XOM, Developing Rules and Configuring Rules in ODM
- Analysis and Fixing of ODM Defects
- Generating SCA Bindings and Web service Bindings in WPS
- Configuring mapping nodes in WPS

Role: Integration Developer

Methodologies: Agile

Environment: ODM, WPS 7.0, WID 7.0, RTC, Data Studio, Soap UI Pro.

Cross Credit Transaction Monitoring, Lloyds TSB Bank, UK

Jan 2013 – Jul 2014

CCTM is used to approve the transaction like payments, Resetting password and adding a payee to the customer Internet Banking and Telephony Banking. It will maintain a profile about the customer and his Activities related to the Account. It will give response like Approve, Reject or refer. For Profiling it utilizes a third party tool called Actimize (a fraud detection tool which is customized for Lloyds Bank). CCTM is a client for the channels (Internet Banking and Telephone Banking). It will validate, store and transform the request to the Actimize format and send it to the actimize.

Responsibilities:

- Following SDLC phases (Initiation, Study, DPAD, Implementation, Unit Testing, Release)

- Active participation in architecture Design, perform system design and analysis.
- Requirement analysis with client and internal functional team
- Guiding team members on technical as well as functional issues
- Monitoring the overall progress of module development
- Design of server side application layer consisting of POJOs
- Evaluation various products by carrying out Proof of Concepts

Role: Developer

Environment: RSA 7, ClearCase, JPA, WAS 6.1, Soap UI.

Acquisition Decision System, Lloyds TSB Bank, UK

Jul 2012 – Dec 2012

ADS are a migration Project. It is migrating from Mainframe to Java. ADS are a Decision engine to evaluate and approve the Credit Card/Loan Applicants/Current Accounts. This Application is both for Consumer and Commercial. Once the complete and correct application data is received, Acquisition Decision System assigns a unique key to an application. Acquisition Decision System verifies the applicant information with the internal database to see if an applicant has already request and rejected. Acquisition Decision System verifies the applicant details against the banks Accounts details. Acquisition Decision System contacts credit bureaus for extra information about an applicant.

Responsibilities:

- Following SDLC phases (Initiation, Study, DPAD, Implementation, Unit Testing, Release)
- Active participation in architecture decisions
- Requirement analysis with client and internal functional team
- Guiding team members on technical as well as functional issues
- Monitoring the overall progress of module development
- Design of server side application layer consisting of POJOs
- Evaluation various products by carrying out Proof of Concepts

Role: Developer

Environment: RAD, ClearCase, Hibernate, WAS 6.1, Soap UI.

New Account Processing System, CitiCards, USA

Nov 2011 – Jun 2012

NAPS is a New Accounts Processing System which processes new applications of RPL (Retail Private Label) cards which are either Consumer or Commercial applications. Applications come in to NAPS through various input (On-line data entry, Point of Sales (POS), Canada Post, telephone, fax, IVR, Internet etc.) and process the application using interfaces.

Responsibilities:

- Part of design and development team

- Design of server side application layer consisting of POJOs
- Requirement analysis with client and internal functional team
- Guiding team members on technical as well as functional issues
- Monitoring the overall progress of module development

Role: Technical Leader (Offshore)

Environment: Eclipse, WAS 6.1, Soap UI.

SBI Workflow and DMS Application – RMME

Jan 2008 – Oct 2011

RMME is Small and Relationship Manager Medium Enterprise, RMME is mainly for Loan to handle above 5 crores. This application is for loan approval and Collateral verification. As part of its BPR initiatives, SBI has centralized most of its non-customer transactions. To free the branch staff from back office activities and to focus on Customer Services, Marketing and improvement of business, many Central Processing Centers (CPC's) are being setup.

Major functions that the software:

- Enable the bank to improve the transaction processing resulting in improved customer service
- Track the user activities based on the processes involved in the workflow.
- Interface allocation for User/Group in the workflow.
- Calculate TAT for different activities at different sections
- Track the status of each item involved in the system.

Responsibilities:

- Active participation in architecture decisions
- Part of design and development team
- Design of server side application layer consisting of POJOs
- Evaluation various products by carrying out Proof of Concepts
- Requirement analysis with client and internal functional team
- Guiding team members on technical as well as functional issues
- Monitoring the overall progress of module development

Role: Developer

Environment: RAD, PVCS, WAS 6.1, JMeter

Personal Information

Gender : Male

Date of Birth : 20th November 1983.

Marital Status : Married.

Fathers name : Mr. Poopandian Chinnasamy

Mothers name : : Mrs. Manchula Poopandian
Spouse Name : : Mrs. Ramya Poomurugan
Communication : : Tamil, English
Interests : : Music, Reading Books, history
PAN No : : AUOPP1285E
Notice Period : : 2 months.
