

PROFILE

- Exceptional Techno-functional consultant successful at directing change management in fast paced environment. More than 14 years in IT domain with proven success in diverse operations of IT while working on projects for various industries like financial, transportation, healthcare, manufacturing, and software development/implementation. Offers strong analytical, planning, and organizational skills to manage competing demands.
- Experience in Workday HCM Integrations like EIB, Cloud Connect, Core Connectors, Core HRMS, Payroll (PICO, PEI) with understanding the Business Process Flows, Case Tools, Business Analysis and transforming them into Workday designs.
- I have also gained extensive experience in Workday Finance, specifically in setting up customer accounts, supplier accounts, managing expense reports, and overseeing projects. My comprehensive knowledge of Workday enables me to provide valuable insights to clients, identify potential areas of improvement, and implement solutions to streamline business processes.
- I have experience in all stages of Workday Testing and have trained and guided team members in testing methods and SDLC.
- Over 4 years in the fields of workday core HCM and financials integrations. Core and cloud connector, EIB inbound/outbound integrations and custom reports configuration, and workday studio using various workday API and web services, studio integrations for custom objects, boomerang integrations.
- Experience in MySQL, multiple versions of Oracle9i/10g, MS SQL Server, Sybase. Excellent experience in PL/SQL Programs.
- Developed and supported more than 200 integrations (including 30+ studio integrations, 4 integrations to facilitate data to custom objects, boomerang integrations and 20+ API calls to workday using various technologies like logic apps, function apps etc. Developed in different programming languages) with last 4 clients while managing multiple teams (business analyst, development, QA, performance and data validation testing, middleware development team, implementers, business owners).
- Successfully led implementation of workday at clients where any change or technology transformation was taking place after a huge gap, and it required not only workday skills but also change management and risk management skills to iterate the project while meeting the deadlines.
- Successfully implemented maintenance plan to manage day to day activities that are crucial in post implementation phase or stabilization phase after any go-live.
- Project Planning, Business Analysis, Team building, GAP analysis, problem solving & solution design, impact analysis, risk analysis, business continuity planning, KT and end user training, project management and Work Breakdown structure are few project management skills that I used and demonstrated successfully in previous projects.

Technical expertise:

- workday HCM/Financial/ADP integrations, workday report writer, enterprise information builder (EIB), calculated fields, PEI, core connector, business process configuration, workday studio, workday configuration, and security groups.

Technical Exposure:

- Workday security, Workday tenant configuration, Workday authorization and authentication, Middle ware technologies (Azure platform): Logic App, Function App, Blob etc., .NET (VB.Net / C#), SQL server, SQL pipeline, Salesforce, Rabbit MQ, ADP

Functional expertise:

- Business requirement document, functional specification document, design document, cutover plan, testplan, run book, flow chart, FIT GAP analysis, project artifacts (project scope, project charter, use case, project schedule, project communication plan).

Project Management Exposure:

- Agile, SCRUM, SDLC, Waterfall, PRINCE2, PRISM

Industry Exposure:

- Logistics, Healthcare, Drug manufacturing, Tools Manufacturing, Utility distribution, Hospitality, E-Commerce, Live streaming platform, Retail

PROFESSIONAL EXPERIENCE

Imast llc - San Antonio- Texas
Workday Integration Developer
Nov 2022 to Present

- I participated in cross-functional meetings to gather requirements for the HR system migration and designed and modified various aspects such as business processes, configurations, reports, security, and integrations based on end-client requirements. Additionally, I updated supervisory organizations, created applicants, assigned organization roles, and assigned user-based security groups.
- I created custom reports using advanced reporting tools in Workday and designed matrix reports that provided analytics for recruiting activity, trending data, compensation data, new hires, and terminations. I also collaborated with business process owners, subject matter experts, and the security audit team for requirements gathering and developed metrics, reports, and dashboards to support business needs.
- I built various calculated fields using functions such as lookup related value, evaluate expression, true/false conditions, extract single and multi-instance, and helped clients understand how custom reports work through knowledge transfer sessions with HR partners.
- I supported configuration specialists and other resources on the team in building complex reports and calculated fields, and tested business processes to ensure they were configured correctly and notifications were sent to the appropriate person. I also maintained the Business Process Monitoring Dashboard to suggest process improvements and alert the configuration team of pending processes.
- I scheduled custom reports to run weekly, bi-weekly, and monthly based on requirements and conducted business process configuration and EIB analysis to support enhancements and process improvement needs. Additionally, I co-led the audit process to ensure temporary reports were removed from the system and moved custom reports within different tenants using Solution Migration.
- I utilized Core Connectors, Enterprise Interface Builder (EIB), and Workday Studio to design and develop integrations that integrate Core HR, Benefits, Recruiting, Finance, and Payroll data from Workday with internal and external systems used across the organization. I worked on complex inbound and outbound studio integrations and supply chain management integrations related to Procurement, Purchase Orders, and Invoices.
- My experience with core HCM and Finance allowed me to create multiple payroll Studio Inbound Integrations, and I developed several EIB integrations to send Journal lines, Ledger Accounts, Cost center/Funds values to Strata, ebuilder vendor. Additionally, I created various custom reports for Payroll, Benefits, and Core HR reports and generated different types of workday reports such as Simple, Advanced, and Birt reports.
- I was also involved in end-to-end (E2E) and user acceptance testing (UAT) and collaborated with business process functional teams to validate the developed integrations with all the test cases and scenarios.

Stanley Black & Decker, San Antonio, TX
Integration Analyst(Workday) / SystemAnalyst
Feb 2022 to Oct 2022

- Worked closely with the implementation partner, solution architect and other stakeholders to derive a solution that uses workday to its maximum efficiency, follow organization data security policy and justify all the use cases. Worked on POC of various integrations.
- I was responsible for spearheading Workday implementation projects for clients, from the development phase to enhancement, upgrade, and maintenance of HR, benefits, absence, compensation, and payroll systems. With a deep functional expertise in Workday HCM, I have set up various modules, including Recruiting, Benefits, Compensation, Advance Compensation, Absence, and Time Tracking, to ensure smooth operations and maximum ROI.
- Implemented inbound and outbound integrations utilizing Workday EIB with XSLT determinations to change the archive arrange into the coveted document configuration, for example, CSV or Excel, Web Services SOAP, REST, XML and XSLT Worked with Workday Studio to fix integration related issues.
- I have work on improving Workday integrations, including EIB, Core Connectors, CCB, Studio and custom reports. I have implemented integrations using Workday EIB, XSLT transformations, CSV and Excel, Web Services (SOAP, REST, XML and XSLT) and worked with Workday Studio to resolve integration issues.
- Involved in implementation and support of Workday HCM for various HR modules such as Benefits, Payroll, Compensation, Absence Management, Time Tracking, Talent Management, Performance Management, Recruiting, and Finance.
- I have developed new HR reports and custom dashboards covering Core HR, Advanced Compensation, Payroll, Time & Absence, and collaborated with business users to understand their requirements, convert them into technical reports, and provide valuable insights through custom dashboards to enhance the HR reporting system.
- Developed integrations using web service SOAP, WSDL, XML, XSLT on the Workday cloud platform such as Payroll integration, ADP inbound/outbound and Taleo integration. Worked to fix integration related issues.
- Worked on developing security groups - assign user based security groups, domain security and business process security.
- Worked as SME for Workday/Azure integrations and worked closely with Azure middleware team in developing inbound and outbound integration and API calls to Workday. Maintained internally developed Studio builds. Performed FIT GAP analysis.
- Created new integration to pull the new hires information using Core Connector Worker and Document Transformation that uses connector integrations XML Output as its data source input.
- I have deployed Workday items through implementation, UAT, and production tenants using proper change management procedures, implemented a custom ATS, and have extensive knowledge in configuring staffing, compensation, benefits, time off/leave, recruiting, absence, payroll, and talent management events within a business process framework.

- Prepares flow charts, business process management (BPM) workflows, and systems diagrams to assist in problem analysis.
- As part of my role, I oversaw the integration of data with third-party systems, which included configuring payroll connectors like PECL, PICO, and External Payroll Documents. Additionally, I ensured that tables and datasets were secure by implementing PRISM expression language for conversions. To ensure smooth operations, I closely monitored and resolved any issues with data integrations using the Control room in the PRISM environment. Troubleshooting was an essential aspect of my role, and I took proactive measures to identify and address any potential issues.
- Responsible for preparing design documentation and ensuring that functional and technical documentation meets requirements. Worked closely with IP, business take holders, vendors and developers and Prepared Integration cutover plan. Designs, and documents software/solution according to SBD-IT systems standards, policies ,and procedures.
- Implemented inbound and outbound integrations utilising Workday EIB with XSLT decisions to change the archive arrange into the desired document configuration, for example, CSV or Excel, Web Services SOAP, REST, XML, and XSLT I collaborated with Workday Studio to resolve integration issues.
- I have worked with various data sources to ensure that the reports generated are accurate and aligned with specific business requirements. I have also gained expertise in creating Advanced Compensation reports that provide a detailed analysis of compensation structures, including bonuses, stock options, and other incentive plans.
- I have worked with Workday's Core HCM, Payroll, Benefits, LMS, and Lotus Notes modules, as well as various technologies such as Calculated Fields, EIB, Document Transformation, Connector, XML, XSLT, and Web Services. I have used these technologies to develop reports and integrations and configure business processes related to staffing, compensation, talent management, and etc. I had a good understanding of how talent management strategies provide data to other Workday applications. I also identified client systems and gathered requirement documents for each integration, analyzed and configured Workday HCM, and conducted evaluations of the current HRIS environment to identify shortcomings and risks, benefits, time off/leave, recruiting, absence, payroll, and talent management events
- Effectively plans and integrates new products with the existing IT landscape. Support tasks with architecture, application services, infrastructure, release management and other relevant stakeholders to enable a smooth deployment.
- Support necessary testing activities such as validating smooth running of integration, validating file format and data format etc. Provides technical assistance where needed to ensure timely resolution of incidents or issues.
- Ensures execution plan is on track and reports any major deviations in budget or timeline. Review, guide, troubleshoot and resolve contentious issues escalated during implementation. Works with outside partners to ensure SBD requirements are met.

Vizient Healthcare, San Antonio, TX
ERP Integration specialist (Workday)
Aug 2020 to Feb 2022

- Involved in full life cycle including requirement gathering, analysis, design, development, testing, implementation, and maintenance. Responsible for deployment of Workday in Vizient application universe. Closely worked with business, vendors, stakeholders, and integration partner to complete business requirement.
- Involved in Integration Testing, Black Box Testing, Functional Testing, Regression Testing ,Bug Isolation Testing, and User Acceptance Testing.
- With extensive experience in creating different types of reports in Workday, including custom reports, I have collaborated with business users to ensure that reports covering Headcount, Compensation, Talent Management, Recruiting, Benefits, and Payroll meet their specific requirements and utilize various data sources, while having particular expertise in reports related to Advance Compensation.
- Involved in strategic planning of deployment by categorizing integrations into groups based on their need, testing required ,understanding of the requirements and time needed to test critical components.
- Conducted discovery sessions with business team and integration partner to design the best solution. Took ownership of development various integrations for inhouse development to meet the go-live date and gave my inputs on standardization of data across organization and keeping future enhancements in mind.
- Responsible for opening Workday Support Case for Workday Bugs and opening Workday brainstorm idea and questions on Workday community.
- Designed and built both inbound and outbound EIB, Core connector and Studio Integrations in various segments of Workday system.
- Worked on Validating and loading data into different Workday tenants such as implementation, Sandbox and Production tenants.
- Discovered few security loopholes in the architecture and brought everyone on same page to use workday best practices to keep financial data and PII secured.
- I have been involved in every aspect of Workday Testing, from SIT to UAT and Parallel Testing, and have provided coaching and support to team members on testing methodology and SDLC.
- I have carried out configuration work to support new and existing functionality in HR business functions, evaluated operating needs and proposed cross-functional or global IT solutions, mapped and integrated local business processes with global processes, and possess expertise in complex XSLT coding with XML and Workday outbound REST API, while also resolving QA team issues and reviewing test plans to ensure comprehensive coverage of all requirements.
- As part of full life cycle implementation, I have mapped Business Processes, configured Personnel Administration, Payroll, and Benefits, and have particular experience in configuring Workday benefits for multiple countries, including groups, plans, coverage types, event types, and eligibility rules.
- I have developed a deep understanding of creating an array of reports in Workday, such as Headcount, Compensation, Talent Management, Recruiting, Benefits, Payroll, and custom reports. My proficiency in different report types, including Simple Reports, Advanced Reports, Matrix Reports, Composite Reports, and more, has helped me cater to the diverse reporting needs of the business.

- I created standard and custom reports in Workday, utilising security features and establishing security groups for Benefits and Payroll integrations. Workday functions such as CCB, Core Connectors, and EIB Integrations have been improved. Data for inbound files was uploaded and verified, including budgetary position, one-time payments, and etc.
- I have configured security group permissions to align with Domains and Business Processes security Policies, developed and configured HR applications such as Absence Management and Time Tracking, and created Composite, Advanced, and Matrix reports for HCM, Absence, Time-Off, Payroll, Talent Reviews, and more, while also being able to alter supervisory organizations, deactivate groups, and transfer employees to new supervisory organizations.
- Developing test strategy and worked on integration services which uses data XSLT to convert Workday xml to a readable format sent to external applications.
- Worked with architecture team to design an architecture which can use Workday with maximum efficiency and maintains a balance between technology best practices and industry best practices.
- Worked closely with Workday security Admin and Workday functional consultants involved in data conversion and configuration to overcome hurdles in testing and success implementation of workday financial at Vizient.

Sage Therapeutics, Cambridge, MA
Workday Integration Consultant/ Business Analyst
Oct 2019 to May 2020

- Involved in full life cycle including requirement gathering, analysis, design, development, testing, implementation, and maintenance. Responsible for Implementation of workflow between various departments and IT that reduced footfall of professional services up-to 80%.
- Closely worked with business users to understand and analyze new requirements and offering insight valuable workarounds for the existing production and new functionality insights of the existing application.
- I was involve in Workday HCM Integrations like EIB, Cloud Connect, Core Connectors, Workday Studio, Core HRMS, Payroll (PICOF, PECL)
- Developed functional specifications, recommend solutions to enhance. Owned and Implemented Workday ADP Studio Integration.
- Configured EIB (Inbound & Outbound), Core Connector, CCB using Tenant and also developing Studio integrations (Outbound & Inbound)to integrate with third party systems.
- Supported various HR modules such as Core HR, Benefits, Payroll, Compensation, Onboarding, Absence Management, termination, Time Tracking, Talent Management, Recruiting, and Finance.
- Created multiple IT tickets with requirements and Workday change management tickets for requesting change board to deploy Integrations to production.
- Worked on creating inbound/ outbound Integrations Using Core Connector, Workday Studio, EIB, managed business processes, Report Writing, Creating Workday Calculated Fields, Custom Reports and converted legacy data into Workday.
- I have worked on inbound and outbound integrations and managed business processes. I have experience with EIB, Report Writer, and creating complex calculated fields and custom reports using the Core Connector. Technical functional expertise in various tools and modules such as Core HR, Payroll, I Recruitment, and Talent management in Oracle applications is required.
- Developed workday reporting and configured dashboards. Worked on Workday Report Writer and creating custom integrations with third party applications and Configured payroll interface to send pay data to external payroll vendor ADP.
- Developed all the Benefit and vendor integrations and performed data validation during testing.
- Collaborating with business partners and functional areas to understand integration requirements and design solutions that meet those requirements. Developing and testing integration solutions using Workday integration tools, such as Workday Studio, EIBs, and APIs.
- Troubleshooting and resolving integration issues, working with technical teams as needed. Providing training and support to business partners on how to use and maintain integration solutions. Staying up-to-date with Workday integration technologies and best practices and sharing that knowledge with other team members.
- I was responsible for ensuring the successful implementation and integration of Workday's HCM solution, and providing ongoing support and expertise to business partners. I was involve in collaboration across functional areas and technical teams, as well as strong communication, problem-solving, and technical skills.
- I was also responsible for providing technical expertise to analyze and solve complex business problems using Workday's configuration capabilities. I was involve collaborating with cross-functional teams, leading project efforts, and ensuring customer-focused solutions that meet business requirements.
- Configuring Workday modules such as HCM, Benefits, Payroll, or other related systems, based on stakeholder needs and requirements. Developing reports, dashboards, and calculated fields in Workday to provide stakeholders with the necessary insights and data they need to make informed decisions.
- Collaborating with technical teams to design and implement integration solutions that seamlessly connect Workday with other systems. Testing and validating Workday configurations and integrations to ensure they meet stakeholder requirements and perform as expected.
- Providing technical support to stakeholders, including troubleshooting issues and providing solutions to problems. Participating in project meetings and providing regular progress reports to stakeholders.
- Staying up-to-date with Workday product releases and enhancements, and identifying opportunities to improve system performance and functionality. Building strong relationships with stakeholders to ensure that their needs and requirements are met, and providing excellent customer service.

National Grid, Waltham, MA
CyberArk Consultant/ Business Analyst
April 2019 to Oct 2019

- Involved in full life cycle including requirement gathering, analysis, design, development, testing, implementation, and maintenance.
- Closely worked with business users to understand and analyze new requirements and offering insight valuable workarounds for the existing production and new functionality insights of the existing application.
- Developed Project artifacts like Test plan, BRD, project estimate etc.
- Involved in all architectural review meeting and decision-making meetings with different leads and vendor.
- Maintain project tracker.
- Worked closely with QA team.
- Participated in maintenance windows where needed.
- Served as the design authority for IAM on behalf of the Cybersecurity team as a member of the Architecture board.
- Collaborated with other technology groups and technology architects on product strategy discussions.
- Maintained working knowledge of advanced threat detection. Managed, coordinated, and prioritized the schedules, projects and activities of direct reports. Worked closely on security policies.

Hiren Hotel, Brockton, MA
IT Project Manager
Jan 2018 to Apr 2019

- Managed successful Implementation of inhouse hotel management system and achieved seamless migrations and integrations that were transparent to property owners and accomplished with no unscheduled downtime. This led to almost 80% improved data quality and overall data accuracy to help track operations, business, compare and analyze daily and seasonal audits of the properties owned by the company.
- Led Agile Scrum teams including software developers and QA testers for deliver. Organized and facilitated daily stand-up meetings (Daily Management), sprint backlog grooming, sprint reviews, retrospectives, release planning etc.
- Planned and executed User Acceptance Testing as well as post Implementation validations to ensure successful releases of system.
- Assisted Product ownership translating complex business needs into deliverable features/user stories on behalf of stakeholders and identified ways to deliver minimum viable products.
- Regularly tracked, communicated, and published metrics to enable senior executives and business users to monitor progress. Provide SME guidance related to project planning, management, and monitoring in technical areas through-out SDLC.
- Develop project management plan, manage project timeline (Gantt chart), determine, and manage project budget. Work with Operations and Functional manager to aid resource management. Collaborate with cross-functional team including purchasing, finance, I.T dept, maintenance, etc.
- Facilitate weekly project milestone reports to key stakeholders. Coordinate with general managers of different property to understand and generalize the reservation and audit system. Manage, evaluate, approve/deny change requests. Facilitate team building events to keep team engaged and motivated.

Jeweler Association (India/Offshore)
Project Manager
Jun 2015 to Apr 2016

- Worked with the business users to define business requirements and analyze the possible technical solutions.
- Worked extensively with SMEs in understanding and documenting their requirements pertaining to Loan Origination, different Accounts, maintaining and analyzing customers Accounting books and many other business Areas.
- Worked with the Business users, tech Lead and 3rd party vendors in gathering their requirements and data transaction information related to OLTP, OLAP and ASP.
- Co-author business requirements document with project teams. Extracted, discussed, and refined business requirements from business users and team members. Facilitated and managed meeting sessions with committee of SMEs from various business areas including inventory, Loan Monitoring and Asset Management.
- Developed and implemented processes and tools for requirements gathering, Analysis, planning, tracking and delivery.
- Analyzed user problems, including automated and manual business processes, and identified, researched, investigated, defined and documented business processes.
- Designed and developed project document templates based on SDLC methodology. Designed and developed Use Cases, Activity Diagrams, Sequence Diagrams, and Collaboration Diagrams. developed project schedules. Develop requirements and preliminary design for client applications. Perform analysis and design projects using a systems development methodology. Work with all levels of client staff in solution definition.
- Conducted workflow, process diagram and gap analyses to derive requirements for existing systems enhancements.
- Collaborated with the QA team to develop the test plan, test conditions and test cases to be used in testing based on business requirements, technical specifications and/or product knowledge.
- Organized cross training of team members and Users to become more responsive. Act as a resource in understanding how IS systems carry out business functions and assists in ensuring the timely and effective implementation. development of training materials for new technology and process improvements

Ilishan Biotech(India/Offshore)

Sr Business Analyst

Sep 2014 to May 2015

- Was responsible for creating and reviewing business requirements, functional specifications, project schedules, documentation, and test plans.
- Worked with production staff to identify and map detailed current processes, identify gaps and failure points, perform root cause analysis, and develop functional requirements that supported overall strategy, goals, and objectives.
- Acted as a liaison between the technical staff and the users (staff and management). Also was responsible for communications between Project Team and other related departments.
- Also involved in content management change control and Version Management. Performed regular updates to various static web pages.
- Coordinate, mentoring of various tools and process flow of the application.
- Lead client facilitation meetings to gather requirements (Inception phase), there after assisted tech leads in Analysis & Design of architecture using OOAD approach using UML & Rational Unified Process.
- Analyze and design Use Case diagrams, Class diagrams, sequence diagrams, Business Objects, Domain Object Moreland Visio
- to depict process flows and PowerPoint presentations.
- Implemented Traceability Matrix and User Requirement Specification Document (URS) and verified the functionality coverage.
- Acted as a resource in understanding how IS systems carried out business functions and assisted in ensuring timely and effective implementation.
- Developed timelines for project delivery, and managed projects and resources to successful completion.
- Involved in developing the test strategy and helped in developing QA Test plans for Functional, Integration and System Testing. Performed User Acceptance Testing.

Kaveri Transport (India/Offshore)

Sr Business Analyst

Aug 2013 to Aug 2014

- Served as a liaison between business team and the project team by assisting the business in identifying, understanding, and documenting their business needs.
- Collected and documented business processes as well as business rules.
- Participated in the identification, understanding, and documentation of business requirements, including the applications capable of supporting those requirements.
- Translated the business needs into system requirements, communicating with the business on a non-technical level, and with the System Analyst on a more technical level.
- Collaborated with development architect and the business to develop both high-level and detailed application architecture to meet the business needs.
- Identified gaps, performed gap analysis.
- Documented and delivered Functional Specification Document to the project team. Participated in the logical and physical design sessions, developed design documents. Assist the PM in setting realistic project expectations and in evaluating the impact of changes on the organization and plans accordingly.
- Provided technical assistance in identifying, evaluating, and developing system sand procedures that are cost effective and meet business requirements.
- Developed test scenarios and implemented test plan. Providing key input in working with users in defining project and system requirements.
- Conducted project related presentations.

Indofab (India/Offshore)

Sr Business Analyst

Sep 2012 to Jul 2013

- Conducting user interviews, gathering, and analyzing requirements. Designed and developed Use Cases, Activity Diagrams, Sequence Diagrams
- Identify, research, Realize, investigate, analyze, define, and document business processes and Use Case Scenarios.
- Perform Gap analysis by identifying existing technologies, documenting the enhancements to meet the end state requirements.
- Conduct workflow, process diagram and gap analyses to derive requirements for existing systems enhancements.
- Assist with user testing of systems (UAT),developing and maintaining quality procedures, and ensuring that appropriate documentation is in place.
- Responsible for identifying and documenting business rules and creating detailed Use Case.
- Conduct User Acceptance Testing
- Worked with development and testing teams to accomplish timely release objectives.
- Using detailed knowledge of application features and functions assess scope and impact of business needs throughout analysis and completion of all enhancement specifications.
- Act as a resource in understanding how Indaba carryout business functions and assists in ensuring the timely and effective implementation.
- Developed timelines for project delivery, and managed projects and resources to successful completion.
- Responsible for all project documentations . Extensively work on Access, Excel, Word, PowerPoint, SQL, MS Project.

New Paradise Educational Society (India/Offshore)

Sr Business Analyst

Jun 2012 to Sep 2012

- Address all aspects of the loan lifecycle, starting from identifying a deal right up to loan closure.
- Used standard Business Analysis methodology centered on RUP (Rational Unified Process). Responsible for eliciting and
- Gathering business user's requirements.
- Designed and developed Use Cases, Activity Diagrams, Sequence Diagrams, OOD using UML. Helped develop use cases, project plans, and manage scope.
- Assisted in building a business analysis process model using Visio. Performed requirement analysis, went through all the use cases and workflows.
- Played a key role in the planning, testing, and implementation of system enhancements and conversions. Provided key input in working with users in defining project and system requirements.
- Functioned as the primary liaison between the business line, operations, and the technical areas throughout the project cycle.
- Analyzed research on operational procedures and methods and recommend changes for improvement – with an emphasis on automation and efficiency.
- Worked with a cross functional and diverse team of business users and developers to enable accurate communication of requirements and ensure consensus.
- Assisted with product evaluation, product customization and system integration.
- Performed analysis on enterprise data / report integration. Provided functional specification to development team.

Buyers Clinic(India/Offshore)

Sr Business Analyst

Jan 2012 to Jun 2012

- To study and assess the client's systems and business processes.
- Established a business Analysis methodology around the RUP (Rational Unified Process).
- Understand the various steps in the lifecycle and then construct the system.
- Clerical work processes had to be streamlined and mapped to the automated system.
- Provide the client's management quick and easy access to all current economics(i.e., construction status, leasing status, etc.)of the collateral pertaining to all the loans in the portfolio.
- Helped develop use cases, project plans and manage scope.
- Assisted in building a business analysis process model using Visio.
- Performed requirement analysis, went through all the use cases and workflows.
- Provided key input in working with users in defining project and system requirements.
- Functioned as the primary liaison between the business line, operations, and the technical areas throughout the project cycle.
- Analyzed research on operational procedures and methods and recommend changes for improvement – with an emphasis on automation and efficiency.
- Conducted benchmarking activities to identify best practices. Assisted with product evaluation, product customization and system integration.
- Provided functional specification to development team to build Enterprise Reporting Systems.

UX Consultant (India/Offshore)

Sr Business Analyst

May 2009 to Dec2011

- Facilitated design sessionswith clients and collaborated with technical architects throughout the softwaredevelopment life cycleto produce user-centered design solutions that met business goals.
- Conducted user research, usability testing, data analytics and competitive analysis.
- Developed user personas and scenarios to clarify resultsof user researchand focus the designs on the needs of lead users.
- Produced workflowdiagrams, flowcharts, and storyboards to aid businessrequirements and refine use cases.
- Defined application functionality, navigation, and interaction modelsthrough sketches, page level wireframes and sitemaps.
- Produced high-fidelity working prototypes to demonstrate the concepts.

EDUCATION

Masters in cyber security planning, New England College, USA (pursuing)

Masters in IT Project Management, Southern New Hampshire University, USA (2017)

Bachelor in computing (Specialization in Web Project Management), Staffordshire University, UK (2009)

PUBLICATION

Paper published at IJCA; "HCIU guidelines for website design for blinds,"ISBN: 973-93-80883-18-7
