

Farman Ali Khan

Dallas, Texas | (469) 729-8935 | farmanalikhan5467@gmail.com

CAREER SUMMARY

- Experienced ServiceNow Developer/Administrator with over 8+ years of progressive expertise in configuring and customizing enterprise-level ServiceNow solutions to meet diverse business needs.
- Highly proficient in core modules including IT Service Management (ITSM), Configuration Management Database (CMDB), IT Operations Management (ITOM), Human Resources Service Delivery (HRSD), Governance risk and compliance (GRC) and IT Asset Management (ITAM).
- Adept at building scalable, high-performance applications and automating workflows that streamline operations, improve user experience, and reduce manual effort.
- Skilled in integrating ServiceNow with third-party systems and tools through REST and SOAP APIs, enabling seamless data synchronization and process automation across platforms.
- Experienced in Agile environments, with a collaborative approach to gathering requirements, designing solutions, integration testing and delivering timely implementations.
- Proven ability to optimize IT service delivery, enhance governance, and support digital transformation initiatives within complex, global enterprises.
- Recognized for problem-solving, attention to detail, and a commitment to quality.

CERTIFICATIONS

- ServiceNow Certified System Administrator (CSA)
- ServiceNow Certified Application Developer (CAD)

PROFESSIONAL EXPERIENCE

Senior ServiceNow Developer

Lenovo | April 2022 - Present

- Led the comprehensive implementation across multiple enterprise modules including ITSM, CMDB, CSM, ITAM, HRSD, GRC and ITOM modules.
- Designed and deployed scalable enterprise workflows aligned with ITIL best practices.

- Developed custom scoped applications using ServiceNow Studio for HRSD, ITSM, ITOM, ITAM, CSM, GRC and security operations.
- Created over 150 Business Rules, Script Includes, UI Actions, and Client Scripts to automate routine tasks.
- Implemented secure Role-Based Access Control (RBAC) using ACLs for data segregation and compliance.
- Integrated ServiceNow with external systems via REST and SOAP APIs, including Azure AD and HR systems.
- Designed and maintained Service Catalog items and Request workflows for streamlined self-service.
- Led efforts to enhance CMDB accuracy using Discovery, Integration Hub, and scheduled imports.
- Developed Flow Designer logic and legacy workflows to support dynamic approvals and SLAs.
- Created custom dashboards and performance analytics reports for executive leadership and IT teams.
- Automated incident and change routing rules based on impact, urgency, and assignment groups.
- Designed notification templates and triggers for system alerts, SLA breaches, and lifecycle events.
- Collaborated with business analysts and stakeholders to gather requirements and document solutions.
- Performed impact analysis, code reviews, and peer testing to ensure production stability.
- Coordinated with QA teams for unit, regression, and UAT testing across development cycles.
- Provided training sessions and knowledge articles for end users and support staff.
- Supported ServiceNow upgrades, performed clone activities, and validated post-upgrade functionality.
- Developed custom portals using Service Portal widgets, enhancing user experience and branding.
- Configured Change Management policies and workflows to reduce unauthorized changes.
- Managed Update Sets and ensured proper promotion across Dev, Test, and Prod environments.
- Supported Asset and Configuration Management lifecycles by automating data reconciliation.
- Established platform governance by implementing naming conventions, version control, and audit logging.
- Conducted root cause analysis and performance tuning to improve platform responsiveness.
- Participated in Agile SCRUM ceremonies, including sprint planning, retrospectives, and demos.
- Delivered measurable improvements in service delivery KPIs, MTTR, and request fulfillment times.

ServiceNow Developer

AstraZeneca | Aug 2019 – April 2022

- Customized ServiceNow ITSM, ITOM, ITAM, CMDB, CSM, GRC and HRSD modules to meet specific business requirements.
- Developed custom SLA workflows for Incidents and Requests.
- Built Service Catalog items with multi-level approvals and variables.
- Implemented CMDB discovery using MID Server for accurate CI population.
- Reduced CMDB data discrepancies through scheduled imports.
- Maintained CI relationships and CI class mapping.
- Designed dashboards in Performance Analytics for executive reporting.
- Tracked KPIs such as SLA breaches, ticket aging, and backlog trends.
- Administered user, group, and role configurations in ServiceNow.
- Integrated LDAP and Single Sign-On (SSO) for user authentication.
- Managed role-based access controls to enforce data security.
- Worked closely with stakeholders to gather functional requirements.
- Translated business needs into scalable ServiceNow configurations.
- Created business rules, script includes, and client scripts.
- Participated in Agile sprint planning, stand-ups, and retrospectives.
- Collaborated with QA for test case development and defect resolution.
- Conducted unit testing and supported regression testing cycles.
- Performed user acceptance testing (UAT), integration testing and obtained approvals.
- Maintained update sets and followed deployment procedures.
- Provided support for post-deployment validation and troubleshooting.
- Developed knowledge base articles and user documentation.
- Delivered training sessions for internal users and support staff.
- Ensured platform stability during upgrades and patching.
- Followed ITIL and CSM best practices in change and incident management.
- Contributed to continuous improvement of ServiceNow processes.

Service Now Developer

Stellantis | Mar 2014 – Aug 2019

- Configured and enhanced ServiceNow ITSM, ITAM, CMDB, CSM, GRC, and HRSD modules to support custom business processes and improve operational efficiency.
- Implemented ITOM Discovery and Service Mapping to identify infrastructure and application dependencies.
- Developed Catalog Client Scripts and UI Policies to enhance user experience and enforce field behavior.
- Built custom data import sets and transform maps for accurate data ingestion.
- Configured SLA definitions and escalation workflows to monitor service commitments.
- Created custom tables and relationships to support non-standard business processes.
- Optimized performance through scheduled jobs, indexing, and script refactoring.
- Managed update sets and coordinated deployments across development, test, and production environments.
- Enabled Single Sign-On (SSO) and multi-factor authentication through Azure integration.
- Supported internal audits by configuring GRC controls and evidence collection workflows.
- Delivered post-implementation support, user training, and knowledge base articles.
- Used ATF (Automated Test Framework) to validate workflows during upgrades and deployments.
- Created dynamic filters and reference qualifiers to streamline form behavior and data selection.
- Established naming conventions and development standards to support scalable growth.
- Conducted root cause analysis and permanent fixes for recurring incidents and system issues.
- Participated in Agile ceremonies including sprint planning, backlog grooming, and retrospectives.

Service Now Developer

Teleperformance | Jan 2010 – Mar 2014

- Tailored ServiceNow modules—ITSM, ITAM, ITA, CSM, GRC, and HRSD—to align with unique organizational needs and ensure optimal platform functionality.
- Customized ServiceNow modules to support unique enterprise workflows.

- Automated approval flows using Flow Designer and business rules.
- Integrated ServiceNow with third-party tools via REST and SOAP APIs.
- Designed custom tables and fields to extend out-of-box functionality.
- Created UI Policies and Client Scripts for dynamic form behavior.
- Built custom reports and dashboards for operational visibility.
- Developed notification templates for system events and SLA breaches.
- Configured Access Control Rules to enforce data security and roles.
- Created custom roles and groups to support delegated administration.
- Optimized incident and request fulfillment processes using workflows.
- Configured CMDB health dashboards to monitor data quality.
- Managed service mapping to visualize end-to-end service health.
- Implemented HR Case and Knowledge Management in HRSD.
- Supported internal audits with automated GRC policy compliance tracking.
- Reduced manual efforts through scheduled jobs and data imports.
- Implemented Asset Lifecycle workflows in ITAM.
- Created catalog client scripts for form validation and field logic.
- Enabled performance metrics tracking using Performance Analytics widgets.
- Built scoped applications for modular development.
- Configured virtual agent topics for automated self-service.

JavaScript Developer

Axact, Karachi, Pakistan | Jan 2003 – Jan 2010

- Developed responsive web interfaces using JavaScript, HTML, and CSS.
- Build dynamic user interfaces with modern JavaScript frameworks (e.g., React, Vue, Angular).
- Wrote clean, maintainable, and well-documented JavaScript code.
- Optimized front-end performance and loading times.
- Integrated RESTful APIs and handle asynchronous data (AJAX, Fetch, Axios).
- Implemented responsive design for cross-device compatibility.

- Used version control systems like Git for code collaboration.
- Debugged and troubleshooted browser-related issues and JavaScript errors.
- Collaborated with UI/UX designers to improve user experience.
- Utilized JavaScript modules and component-based architecture.
- Build reusable components and front-end libraries.
- Applied best practices for security (e.g., XSS, CSRF prevention).
- Conducted code reviews and provide constructive feedback.
- Performed unit and integration testing using tools like Jest or Mocha.
- Participated in Agile development cycles and daily standups.
- Maintained technical documentation and coding standards.
- Worked closely with back-end developers to ensure seamless integration.
- Used built in tools like Webpack, Babel, or Vite for code compilation.
- Implemented state management solutions (e.g., Redux, Pinia, Vuex).
- Monitored front-end application performance and error tracking.
- Automated workflows using task runners (e.g., Gulp, Grunt).
- Stayed updated with JavaScript trends, libraries, and frameworks.
- Contributed to continuous improvement of the development process.
- Ensured cross-browser and cross-platform compatibility.

EDUCATION

- Bachelor of Business Administration & Commerce

University of Karachi, Pakistan | 2001
