

Full Stack Java Developer

Phone: [REDACTED]

Email: [REDACTED]

SUMMARY:

- Around **8+years** of experience in developing web and windows applications using **Java** and **J2EE technologies**.
- Sound knowledge and experience in the development of web based applications using **Core Java, JDBC** and **XML** technologies.
- Expertise in working with **SOA, Web 3.0, Struts 1.X/2.X, Spring, Java, JSP, JDBC, JPA, JDO, JUnit, JavaScript, JSON, HTML, XHTML, XML and XSLT**.
- Experience in **HTML5/CSS3, Backbone.js, Node.js, Angular.js, React.js**, Responsive design and Photoshop.
- Proficient developer of view - controller components using **Servlet's/JSPs and Struts Framework**.
- Strong hands-on experience with **Spring IO, Spring Boot**
- Hands-on experience in using message brokers such as **ActiveMQ**
- Migrate **IaaS, PaaS and SaaS** instances between public and private clouds
- Architect and deploy Symantec public/private cloud platforms (**IaaS, PaaS & SaaS**)
- Lead data center transformations projects to migrate client/server applications and platforms to **cloud environments**.
- Develop **cloud reference architectures**, governance policies, security models, and best practices.
- Extensive knowledge of **Flex class Library** and experience in working with advanced components like **graphing, charting** and **dashboard** layout design development in Flex.
- Expertise in Design, Development, Deployment of Enterprise and Web Based projects using Web servers and various application servers including **WebLogic** and **WebSphere**
- Involved in Tool analysis like **itext jar** and **BIRT** and feasibility study for the application.
- Lead for doing POC work related to complex **BIRT tool** and **PLSQL**
- Wrote GWT code to create presentation layer using **GWT widgets and event handlers**.
- Experience using tools like **Vagrant, Maven, Ansible and Chef**.
- Using **Docker, Jenkins, VMWare, RHEL, Satellite, OpenShift, Kubernetes, Artifactory, Ansible & GitLab**
- Implemented Automation process for web service test case using **Selenium and rest client**.
- Experience with **Selenium IDE, Selenium RC** (remote control) and **Selenium web drive**
- Version Control System Administration, using GIT.
- Experience in **Oracle WebLogic 11/12 Administration**
- Writing unit tests using **Jasmine** with karma.
- Expertise in Object Oriented Analysis, **multi-threading** and **Design (OOAD), OOP** (Object Oriented Programming), **Perl** and applying OO principles in software development.
- Hands on experience in designing **UML** diagrams using **EA** and **RationalRose**.
- Good experience in working with different types of databases like **DB2, Oracle, MySQL**.

- Proficient with all **Cassandra utilities (nodetool, cqlsh** etc)
- Developed Complex database objects like Stored Procedures, Functions, Packages and Triggers using **SQL** and **PL/SQL**.
- Develop reusable solution to maintain proper coding standard across different java project. Proficiency with the application servers like **WebSphere, WebLogic, JBOSS and Tomcat**.
- Experienced with **XML** related technologies such **XML, XSLT (DOM, SAX), XPATH and DTD**.
- Experienced with various frameworks like **Struts, Spring, Hibernate**, and **JPA**.
- Developed clients for the Web Services using apache axis and tested it using **SOAPUI**.
- Good knowledge of developing **GUI** based application using **Swings** and **Java Applets**.
- Expertise at **JDBC API** for connection and access to databases.
- Experience on different IDEs such as **RAD, Eclipse, NetBeans** and deployment using Application Servers **Apache Tomcat, BEA WebLogic, WAS** and **JBoss**.
- Experience with **JUnit, Log4j** in developing test cases and determining application functionality.
- Experience in implementing Design Patterns like **Singleton, Factory, Session Facade, MVC**, Data Access Object and Business Delegate.
- Experienced in **RDMBS** such as **Oracle, MySQL** and **IBMDB2** databases
- Having Experience on **UNIX** commands and **Deployment of Applications** in Server.
- Rich experience in deploying of J2EE Applications on various servers (**WebLogic, JBOSS and Tomcat**).
- Experienced in coding **SQL Procedures/Functions, Triggers** and **Packages** on database packages like Oracle.
- Knowledge of **software development life cycle and project documentation**.
- A self-motivated professional and **natural communicator** possessing **good technical**, initiating, leadership and **problem-solving skills** and has proven to be a **good team player**.

EDUCATION:

Bachelor in Computer Science.

TECHNICAL SKILLS:

Languages	Java 8, JavaScript, C++, Perl, Python, Groovy, HTML5, XSLT, XSL, CSS3, DOJO
Web Frameworks	Servlets, JSP, Ember.js, JSTL, Ajax, JQuery, Bootstrap, Angular.js, Node.js, React.js, Struts, Spring 3.2, Grails, YUI
Application Frameworks	EJB 3.0, JMS, JDBC, Hibernate, EH cache, Spring MVC
Application Server	WebLogic 10.3, WebSphere 7.0, Glassfish v2, JBoss, Tomca
Web Server	Apache
Web Portals	Life ray Portlets 5.x, Life ray Portlet6.0.5
IDE Tools	Net Beans, Eclipse, AccuRev, SLSB, RAD, STS, MDB RDBMSOracle, MySQL, NoSQL, SQL, MS SQL, DB2

RDBMS	Oracle, MySQL, NoSQL, SQL, MS SQL, DB2
Tools	XML Spy, Splunk, SOAP UI, Ant, Jenkins, Maven, Subversion, GIT, CVS, Photoshop
Design Methodologies	OO Design, Analysis(UML) from Rational Rose, Clear Case 7.0/Clear Quest
Flex	Flex 3.0/4.0, Action Script 2.0/3.0, MXML, Flex Data Services, BlazeDS, Flash, AIR, Cairngorm, Adobe Live Cycle Data Services(LCDS), Flex Builder, Adobe PhotoShop, Flex Unit 4.0
Operating Systems	Windows, Android, IOS, Unix, Linux.
Java/J2EE Technologies	J2EE, Servlets, JDBC, Struts, EJB, Hibernate, Spring MVC, Spring Boot, Spring Security, SOAP, REST, JSF
Relational Databases	Oracle 9i/10g/11g, DB2, SQL Server, MySQL, Mongo DB, Cassandra
Cloud Environments	AWS, Pivotal Cloud Foundry
IDE	Eclipse, NetBeans, IntelliJ IDEA, Spring Tool Suite (STS)

PROFESSIONAL EXPERIENCE:

Client: Spectramedix USA
till now

Feb 2024-

Role: Full Stack Java Developer

Description: In today's performance driven healthcare landscape, the path to quality improvement begins with clinical data. SpectraMedix partners with your healthcare organization to transform real-time and retrospective data into measurable clinical and financial results.

Responsibilities:

- Understanding the current system and also the business requirements for the new **OMS**.
- Responsible for enhancing modules like **Assets, QC, QA**, Authoring and cancel the unused services in the existing system.
- **MVC** architecture was implemented for supporting the UI using **Java Server Faces** framework.
- Used Spring Core Annotations for Dependency Injection Spring DI and Spring MVC for REST API s and Spring Boot for **micro-services**.
- Developed and maintained scalable backend services using **Java** and **Spring Boot**, integrating RESTful APIs for data-intensive applications.
- **Extensive hands-on experience with Oracle PL/SQL** for writing complex stored procedures, functions, packages, and triggers to support enterprise-level applications.
- Proven ability to work in cross-functional teams and deliver full-stack features end-to-end.
- Responsible for designing the User Interface by coding in **HTML5, CSS3, AngularJS, Bootstrap** to build this **SPA Single Page Application**
- Developed and maintained **modern web applications using ReactJS and Redux**, integrating dynamic UIs with backend services for seamless user experiences.

- experience in **Java/J2EE** development, including **JDBC, JSP, Servlets, and XML**, building scalable, enterprise-grade applications.
- Developed and maintained scalable **microservices** using **Java (8/11/17)** and **Spring Boot**, adhering to RESTful architecture.
- Proficient in using modern IDEs such as **Eclipse, IntelliJ IDEA**, and **NetBeans** for developing and debugging enterprise applications.
- Built reusable and scalable **TypeScript components** for complex front-end workflows, ensuring strong typing and maintainable code architecture.
- Designed and optimized **complex SQL queries** and PL/SQL scripts to support business logic and improve backend data processing performance.
- Integrated Apigee proxies with **OAuth identity providers** (e.g., Okta, Keycloak) for token introspection and authentication.
- Built ETL pipelines using **PySpark** to process and transform large volumes of data from AWS S3 into Redshift for analytics consumption.
- Implemented **Node.js server-side logic and RESTful APIs**, enabling efficient communication between frontend React applications and backend Java services.
- Extensive hands-on experience with **Spring (Core, MVC, Boot, Security)** and **Struts** frameworks for building modular and maintainable applications.
- Used **Lombok, MapStruct**, and **Project Reactor** to enhance code readability and performance.
- Designed and developed **RESTful APIs** using **Java** and **Spring Boot** following best practices for scalability and maintainability.
- Implemented the **Graphic User Interface GUI by coding in HTML5, CSS3, Bootstrap, JavaScript, jQuery, and jQuery UI**.
- Refactored legacy Java modules by creating **microservices in Node.js**, improving performance and scalability of the application ecosystem.
- Developed **data validation routines, exception handling logic**, and custom utilities using PL/SQL for seamless integration with Java-based applications.
- Skilled in working with **application servers** like **Apache Tomcat, JBoss, WebSphere**, and **WebLogic** for deploying Java EE applications in production environments.
- Customized CSS files by adding new **CSS3** features like **media queries** to ensure **fluid/responsive** design for our web pages.
- Implemented AWS services such as **Lambda, EC2**, and **S3** to support scalable cloud-based microservices and batch processing jobs.
- Integrated frontend apps with **Spring Boot or Java EE services** using secure API gateways and middleware developed in Node.js.
- Developed and maintained microservices-based applications using **Java 8/11, Spring Boot**, and **RESTful APIs**, ensuring scalability and performance.
- Experience with **Selenium IDE, Selenium RC** (remote control) and **Selenium web drive** Version Control System Administration, using **GIT**.
- Consumed REST APIs in Angular using **HttpClient** and implemented error handling and observables for state management.

- Collaborated with data engineering teams to integrate **Java**-based APIs with **Spark** workflows and scheduled jobs using **Apache Airflow**.
- Utilized **Redux for global state management**, improving performance and simplifying debugging across large-scale React applications.
- Experience in **performance tuning** of PL/SQL queries and database objects to reduce execution time and optimize database interactions.
- Strong expertise in **SQL development**, with ability to write complex queries, stored procedures, and optimize database interactions for performance.
- Created **API documentation** and interactive test consoles using Apigee's developer portal for easier onboarding of API consumers.
- Collaborated with UI/UX designers to build responsive, cross-browser-compatible interfaces using ReactJS, HTML5, CSS3, and ES6+.
- Designed and implemented backend modules in a microservices architecture with **Spring Cloud, Eureka, Hystrix, and Config Server**.
- Experience providing training to development teams on how to track, plan and analyze using **JIRA**.
- The **Spring** web flow was used to control the UI flow navigation of this web application and integrated with **JSF**.
- Hands on experience in various project management methodologies like **Waterfall** and **Agile Project Management**
- Designed and deployed a data processing pipeline using **PySpark on AWS EMR**, ingesting log data from S3 and loading clean datasets into Redshift.
- Created and managed **materialized views, indexes, and partitions** to enhance data access performance in large-volume systems.
- Developed and maintained **end-to-end full-stack features** using a Java backend, Node.js middleware, and ReactJS frontend, improving user task efficiency by 30%.
- Worked on **Agile** Earned Value Management, Release Train Planning, Risk Management
- All the functionality is implemented using **Spring IO / Spring Boot, Thymeleaf and Hibernate ORM**. Implemented Java EE components using **Spring MVC, Spring IOC, Spring transactions** and Spring security modules.
- Integrated backend PL/SQL logic with **Spring Boot microservices** for real-time data access and manipulation.
- Built monitoring tools using **Python** to detect data anomalies and trigger alerts via AWS SNS.
- Solid experience in **system analysis, design, and architecture** of multi-tier transactional systems using object-oriented design principles and UML.
- Designed and implemented **RESTful APIs** with proper exception handling, validation, and security standards.
- Implemented **unit and integration testing** using Jest (React) and Mocha/Chai (Node.js) to ensure code reliability and minimize regressions.
- Built and managed **API proxies and products** using **Apigee Edge**, including policies for security, rate limiting, and analytics.

- Optimized Spark jobs to reduce runtime by 35% through caching strategies and proper partitioning.
- Applied performance tuning and profiling tools to improve **application scalability and performance** under production loads.
- Writing unit tests using **Jasmine** with karma.
- Worked on **data migration and transformation** projects involving large datasets using PL/SQL and supporting ETL processes.
- Implemented **unit and integration testing** using Jest (React) and Mocha/Chai (Node.js) to ensure code reliability and minimize regressions.
- Used **Lombok**, **MapStruct**, and **Project Reactor** to enhance code readability and performance.
- Developing Docker images to support Development and Testing Teams and their pipelines; distributed **Jenkins**, **Selenium** and **JMeter** images, and Elasticsearch, Kibana and Logstash (ELK & EFK) etc
- Implemented Automation process for web service test case using **Selenium and rest client**.
- Working closely with Architecture, Development, Test, Security and IT Services teams
- Developing scripts for build, deployment, maintenance and related tasks using **Jenkins**, **Docker**, **Maven**, **Python** and **Bash**
- Built CI/CD pipelines for React and Node.js applications using tools like Jenkins, GitLab CI, or GitHub Actions, aligning with enterprise-grade Java environments.
- Deployed and managed cloud-native applications on **AWS** using services like **EC2**, **S3**, **RDS**, **Lambda**, **CloudWatch**, and **EKS**.
- Created unit and integration tests using **JUnit**, **Mockito**, and **Testcontainers** to ensure code quality.
- Developed **microservices** using **Spring Cloud**, implementing **service discovery** (Eureka/Consul), **centralized config** (Spring Cloud Config), and **inter-service communication** (Feign, RestTemplate).
- The **Spring** framework was used to manage the transactional requirements.
- Developed **Servlets** interacting with database to create **java beans** for the model layer and various business objects implementing **business logic**.
- Involved in the designing of the applications based on **SOA** and exposing the functionality using **Web Services**.
- Lead data center transformations projects to migrate client/server applications and platforms to **cloud environments**.
- Integrated **authentication and authorization (JWT, OAuth2)** in Node.js APIs for secure access to frontend applications.
- Collaborated with DBA and data architects to define and implement **data models**, normalization, and referential integrity.
- Proven ability in **performance tuning** Java applications and optimizing database access through proper indexing, query optimization, and connection pooling.
- Integrated **Spring Cloud Config**, **Eureka**, and **Feign Clients** for microservices-based architecture.

- Adhered to **secure coding practices**, addressing vulnerabilities and ensuring compliance with organizational security standards.
- Migrated parts of a Java-based web application to **ReactJS front-end and Node.js backend**, reducing load times and enhancing developer productivity.
- Develop **cloud reference architectures**, governance policies, security models, and best practices.
- Used **Jersey MVC** to handle front-end requests as well as back-end logic.
- Wrote GWT code to create presentation layer using **GWT widgets and event handlers**.
- Created custom **composite widgets** to make it reusable across the application.
- Used **Flex profiler sampling** to resolve performance issues.
- Involved in skinning and styling of **flex components**.
- Applied performance tuning and profiling tools to improve **application scalability and performance** under production loads.
- Developed **PL/SQL scripts for batch processing**, report generation, and backend jobs as part of nightly data loads.
- Integrated with **CI/CD pipelines** using **Jenkins, GitLab CI, or Azure DevOps** for automated build, test, and deployment.
- Familiar with integration of Java EE applications with REST/SOAP web services and third-party APIs.
- Applied **Spring Security** and **OAuth2** for secure authentication and authorization across services.
- Implemented the function to send and receive **AMQP** messages on **RabbitMQ** synchronously and asynchronously, and send **JMS** message to **Apache ActiveMQ** on the edge device.
- Involved in Tool analysis like itext jar and **BIRT** and feasibility study for the application.
- Implemented table structures pagination using **BIRT** s render and publish methods.
- Involved in **Java SQL** development.
- Designed, developed, and deployed **API proxies** using **Apigee Edge**, enabling secure and scalable API exposure for backend services.
- Worked on **JPA/Hibernate** for ORM mapping and optimized database access using custom queries and criteria APIs.
- Utilized PL/SQL with **Informatica ETL processes** for staging and loading data into target systems in enterprise data pipelines.
- Worked directly with **onshore customer stakeholders** to gather requirements, plan sprints, and deliver business value consistently.
- Strong understanding of **MVC architecture**, design patterns (Singleton, Factory, DAO, etc.), and software development best practices.
- Involved in Localization for customizing an application.
- Created **Data Source** for interaction with **Database** .
- Developed **SQL** Stored Procedures and Prepared Statements for updating and accessing data from Database. Utilized **Hibernate** for **Object / RelationalMapping** and querying using **HQL** .
- Object relational mapping is done using **Hibernate** for data persistence and involved in the integration of **Hibernate** with **Spring** framework.

- Managed and mentored **offshore development teams**, ensured timely delivery of sprint goals, and actively contributed 8+ story points per sprint.
- Involved in technical specifications, designed and developed using **Swings**, **Hibernate** and **Spring**
- **Log 4j** was used to monitor the error logs.
- Created and managed **API products**, developers, and developer apps using Apigee's API management portal.
- Implemented **data auditing, logging, and exception tracking mechanisms** within PL/SQL procedures for traceability and support.
- Proficient in version control tools like **Git**, build tools like **Maven/Gradle**, and CI/CD pipelines using Jenkins or similar tools.
- Used **Swagger/OpenAPI** for API documentation and **Postman** for testing endpoints.
- Experience working with **REST APIs**, **WebSockets**, and **GraphQL** for real-time applications.
- Used **ANT** to build and deploy the application.
- Developed several unit tests using **JUnit** framework
- Worked on database interaction layer for insertions, updates and retrieval operations of data from **Oracle 10g** database by writing stored procedures.
- Used **UNIX** Script and used **Maven** as version control system.
- Deployed the application on **WebSphere** Application Server.

Environment: Java 1.5, JSP, JSF 1.2, Swings, Servlets, Spring, Session Façade, DAO, DTO, Java Script, AJAX, RAD 7.0, WebSphere Application Server 10.0, MQ, Hibernate 3.2, Oracle 10g, XML Schema, SOAP, WSDL, Log 4j, Junit, Unix scripting, Maven, Flex SDK 4.5.1, Action Script 3,

Client: Spectrum USA

2023-Jan 2024

Role: Full Stack Java Developer

Jan

Description: Spectrum Business is a division of Charter Communications dedicated to providing superior Internet, phone, and TV services to small businesses across 41 states.

Responsibilities:

- Involved in **SDLC Requirements gathering, Analysis, Design**, Development and Testing of application using **Agile Model**.
- Designed reusable **Angular components**, services, and directives following modular architecture.
- Actively Involved in designing the outline of project, understanding of business necessities and interacted with other team members to understand the requirements for the project.
- Build **Microservices** For Delivery of software product across the Enterprise.
- **Proficient in Java EE**, Spring Boot, Spring MVC, Apache Camel, Apache Tomcat for backend development.
- Proficient in **Oracle PL/SQL**, relational database design, and SQL performance tuning.

- Implemented **J2EE** standards, **MVC** architecture using **Spring(MVC)Framework** and combined with **ORM(Hibernate) framework**.
- Designed and developed **scalable, high-performance web applications** with both server-side and client-side technologies.
- experience in **Java/J2EE** development, including **JDBC, JSP, Servlets, and XML**, building scalable, enterprise-grade applications.
- Consumed REST APIs in Angular using **HttpClient** and implemented error handling and observables for state management.
- Involved in **end-to-end development lifecycle**: requirement analysis, system design, coding, unit testing, and deployment.
- Basic working knowledge of **HTML5, CSS3, JavaScript**, and **React.js** for debugging or developing front-end features when required.
- Experience delivering enhancements and new features to complex enterprise systems in **Agile/Scrum** environments.
- Experience in **RESTful API design and integration** using industry-standard practices and patterns.
- Handled **production support and incident resolution** through ELK stack monitoring and alerting.
- Developed application modules using **Spring MVC, Spring Annotations, Spring Beans, Dependency Injection**, with database interface using **Hibernate**.
- Applied **traffic management policies** including **rate limiting, quota**, and **spike arrest** to ensure optimal performance and prevent abuse.
- Involved in the design and development of **Batch** Jobs using **Spring Batch** Architecture. Used **Multithreading** to enable multiple operations to be performed simultaneously.
- Developed custom **JavaScript, Python**, and **Node.js** policies in Apigee for advanced API behavior and transformation.
- Strong knowledge of **front-end technologies** including Angular, TypeScript, JavaScript, HTML5, CSS3, RxJS.
- Extensive hands-on experience with **Spring (Core, MVC, Boot, Security)** and **Struts** frameworks for building modular and maintainable applications.
- Tested **Rest APIs** in **Spring-Controller** at backend for **JSON** data using Postman.
- Involved in developing code to convert a **SOAP response** in to a **JSON object** and construct a tree in UI.
- Used java concepts like **Collections, Generics, Exception handling, Concurrency** to develop business logic
- Used Java **Multithreaded** programming to develop multithreaded modules and applications.
- Experience in **Spring Security** and **Spring MVC frameworks**, and **Hibernate ORM** framework.
- Used **Spring BOOT** to create **stand-alone spring applications**.
- Used **Spring Inversion of Control**, to make application easy to test and integrate.
- Used **DAO classes** with **Spring Controllers**.
- Developed **LDAP** server configuration file to enable encryption support for password storage.
- Developed GUI using **Adobe Flex, Exaltation Script** and **CSS**.

- Used servlets as front controllers, **jQuery, AngularJS, JSP, HTML and CSS** on front end and **JavaScript, jQuery** for client-side validations.
- Participated in Agile/Scrum ceremonies and used **JIRA, Confluence**, and **Bitbucket/GitHub** for team collaboration.
- Skilled in working with **application servers** like **Apache Tomcat, JBoss, WebSphere**, and **WebLogic** for deploying Java EE applications in production environments.
- Created proof-of-concept using responsive web design, **Node.js, React JS, HTML5** and **CSS3**.
- Used popular **Node.js** frameworks like Express and Restify to mock a **Restful API**.
- Utilized **Spring Annotations** and **XML Configuration** for Dependency Injection.
- Wrote Rest-Controller w.r.t **RESTful** standards in **Spring MVC** to connect model with view.
- Implemented web services for **communicating** using **SOAP**.
- Experience in Migrating the **WebLogic/Jboss** servers from Development to **Stage and Stage to Production**.
- Knowledge of **Jboss Messaging Persistence Manager**.
- Used **GIT** to maintain and modify the code and configurations related to **Jboss**. Used Bamboo linked with GIT repositories.
- Proficient in version control tools like **Git**, build tools like **Maven/Gradle**, and CI/CD pipelines using Jenkins or similar tools.
- Strong expertise in **SQL development**, with ability to write complex queries, stored procedures, and optimize database interactions for performance.
- Built dynamic, responsive web interfaces using **Angular 14+**, **RxJS**, **TypeScript**, and **SCSS**.
- Trimmed the **Jboss EAP** to create the slim version of Application Server and secured the **Jboss application server**.
- Provided connections using **spring with Hibernate** to the database and developed SQL queries to manipulate the data.
- Followed **Agile/Scrum** methodologies, participated in sprint planning, reviews, retrospectives, and daily stand-ups.
- Solid experience in **system analysis, design, and architecture** of multi-tier transactional systems using object-oriented design principles and UML.
- Used **Spring DAO** concept to interact with oracle database using **Hibernate Template**.
- Developed and consumed asynchronous messaging using **Java Message Service (JMS)** for FTP between multiple applications as per the business life cycle.
- Used **Maven** and **Gradle** to build the project and JUnit to develop unit test cases
- Expertise in using **JUNIT** for Unit testing, **Log4J** for logging and debugging purposes, warning info on the server console and Version controller **SVN** to maintain code versions and documentation.
- Used **Web Logic Application Developer** for building, testing and deploying application locally.
- As part of the automation process used **Selenium** features like taking screenshots, Actions, handling frames, scrolling, alerts etc.

- Proven ability in **performance tuning** Java applications and optimizing database access through proper indexing, query optimization, and connection pooling.
- Responsible in identifying defects in application using **JProbe** and **Load Testing** using **JMeter**.
- **JProfiler** to profile the application before we release and for monitoring purpose.
- Interacted with testing team to fix defects.
- Integrated **CI/CD pipelines** for Apigee proxy deployment using tools like Maven, Jenkins, or Apigee Maven plugins.
- Deployed containerized applications using **OpenShift (OCP)** and managed lifecycle through **oc CLI** and templates.
- Involved in bug fixes, enhancements and code refactoring.
- Hands on experience in **EC2 , VPC, Subnets, Routing tables, Internet gateways, IAM, Route53, VPC peering, S3, ELB, RDS, Security Groups, Cloud Watch, SNS on AWS .**
- Collaborated closely with **frontend developers, DevOps, QA, and product teams** to ensure timely and high-quality deliverables.
- Proven leadership in driving **end-to-end project deliveries** while balancing hands-on coding and team oversight.
- Familiar with integration of Java EE applications with REST/SOAP web services and third-party APIs.
- Managed servers on the **Amazon Web Services AWS** platform instances using Chef Configuration management
- Provided user Access Management for right user from **Identity Access Management(IAM)**.
- Strong understanding of **MVC architecture**, design patterns (Singleton, Factory, DAO, etc.), and software development best practices.
- Installing, Configuration and administering Jenkins with continuous Integration tool on **LINUX** machines along with adding/updating plug-in such as **SVN, GIT, Maven** along on deploying artifacts using **XL Deploy, Amazon**.
- For Project **Pipelines/workflows** system used **Jenkins as CI Tool**.

Environment: Java, J2EE, JSP, HTML, CSS, AJAX, JavaScript, jQuery, AngularJs, Node JS Web Logic Application Server, Spring batch, Spring security, Spring IOC, Spring Boot, Spring Framework 4.2, JSON, Ruby, Jboss, Hibernate 5.x, LDAP, XML, Oracle 10g/11g/12c, Action Script3.0, NodeJS, Jenkins.

Client: Growel Softech Pvt. Ltd. Mumbai,
2018-Sep 2021

May

Role: Full Stack Java Developern

Description: At Growel Softech Pvt Ltd, we are more than just a recruitment agency. We are the catalysts of talent transformation, connecting top-notch professionals with opportunities that ignite their potential. With our roots dating back to 1999, we've been on an exhilarating journey, connecting top-tier talent with leading organizations.

Responsibilities:

- Participated in and is key contributor to various **SDLC** phases - Analysis, Design and Testing.
- Determined project impact from a technical perspective, assesses business needs and prepared technical requirements.
- Experience in performance tuning **Apache Cassandra**.
- Experience in Planning and implementing (scripting) backup strategies for **Cassandra**.
- Experience in **Cassandra Data Modeling**.
- Extensively involved in coding with **AngularJS**, **jQuery UI** and **jQuery Mobile** to add functionalities and effects like **Accordion**, **Infinite Scroll bar**, **Slider bar**, **Draggle/Droppable**, **Resizable**, **Progress bar**.
- Project was developed using Agile based **SCRUM** Methodology.
- Used **XML** parser **APIs** such as **JAXP** and **JAXB** in the web service's request response data marshaling as well as unmarshalling process.
- Installing, configuring and maintaining **Continuous Integration**, **Automation** and **Configuration Management tools**
- Experience with **Selenium IDE**, **Selenium RC** (remote control) and **Selenium web drive**
- Automated the creation and labelling and adding to version control, then set up push-button deployments from Subversion to Oracle Databases via **Jenkins** and **JNLP Nodes**
- Coordinating and tracking all projects for seamless releases using Project Management System **JIRA**, Source Code Management System **SVN** and Document Management System **SharePoint** .
- Used **CVS** and **GIT** for version control across common source code used by developers.
- Used Spring Core Annotations for Dependency Injection **Spring DI** and **Spring MVC**, **Spring Boot** for micro-services and **Spring Batch** for Running **Batch Jobs**
- Involved in installation and configuration of **Adobe Flex Builder plugin for Eclipse**.
- Developed **Pojos** in Java and **value objects** in as3 for mapping objects.
- Used **Flex unit** as a unit testing framework for flex application.
- Integrated configured Camel with **ActiveMQ** to use it as bus
- Prepared technical design documents and Unit Test Case documents.
- Responsible for application code development and quality and ensured J.B.Hunt product standards are implemented and conducted peer reviews.
- Migrate **IaaS**, **PaaS** and **SaaS** instances between public and private clouds
- Architect and deploy Symantec public/private cloud platforms (**IaaS**, **PaaS & SaaS**)
- Developed the **MVC** application model using **Spring framework**, and used **Hibernate** framework to interact with the database.
- Done server side validation and client side validation.
- Involved in supporting the Application after roll out to the customers like data configuration and application level issues.
- Implemented **SOAP** based **WebServices** using **ApacheCXF**.
- Developed PL/SQL store procedure to fetch data as per the **BIRT template** design.
- Developed a Web 2.0 control console using **GWT** to manage data matching for data staging
- Invoked/Consumed the **WebServices** for fetching the account details of the client
- Involved in project testing phases - System Integration Testing, User Acceptance Testing and tracking/resolving application issues.
- Responsible for deploying applications in development and **DEV** environments

- Used **JUnit** Testing Framework for performing **Unit testing**.
- Responsible for handling day-to-day technical issues, analyzed and determined root cause, facilitated resolution.

Environment: JDK 1.7, J2EE, Spring, Hibernate, Struts, JSP, Servlets, Oracle Database, AJAX, Java Script, Eclipse IDE, JUnit, CXF Web Services, NoSQL, Cassandra, WebLogic 10, JQuery, SVN, Flex Unit 4.0, Flex Profiler, Flex 3.0/4.0, GWT, Java BIRT Tool, Active MQ, IaaS, PaaS, SaaS, Spring Boot, Jenkins

Client: Fieldez Technologies Bengaluru,
2017-May 2018

Oct

Role: Java full stack Developer

Description: FieldEZ transforms customer's field operations and services using digital technologies such as cloud computing, enterprise mobility, data analytics & insights, and IoT integration.

Responsibilities:

- Involved in designing of the system using Functional Specification provided by Business Analysts.
- Involved in developing the application built using **J2EE** technologies like **Struts and Spring MVC Framework**.
- The application is based on **JSP, Javascript, Struts 2.0, JSF 2.0, Hibernate 3.0**, Service Oriented Architecture System Analysis and Design methodology as well as Object Oriented Design and Development using OOAD methodology to capture and model business requirements.
- Involved in Installation and Configuration of **Tomcat, SpringSource Tool Suit, Eclipse, unit testing**.
- Involved in Migrating existing distributed JSP framework to Struts Framework, designed and involved in research of **Struts MVC** framework which fits into our existing **framework**,
- Developed **Ajax framework** on service layer for 2 module as benchmark
- Implemented Service and DAO layers in between **Struts and Hibernate**.
- Architected an enterprise service bus using **Mule, Java (EJB3), Hibernate, and Spring** to tie back-end business logic/systems with web properties via a corresponding **RESTful API**.
- Used **XSLT** for transforming **XML** documents.
- Designed **Graphical User Interface (GUI) applications using HTML5, JSP, JavaScript (JQuery), CSS, and AJAX**.
- Applied **MVC pattern** of Ajax framework which involves creating Controllers for implementing Classes.
- Refactored, re-architected, and enhanced an existing AngularJS application to follow strict **MVVM/MVC** patterns for improved source code maintenance.
- Designed and developed the **UI using Struts view component, JSP, HTML, CSS, AngularJS and JavaScript**

- Installed, configured, and managed the servers (**Amazon Web Services, Linux, Tomcat, Apache, MySQL, MongoDB, Groovy/Grails, Hudson/Jenkins, JIRA, Git, JUnit, MediaWiki, tripwire, fail2ban, ssh, sendmail, sudo, etc.**).
- Used Ext JS ui components to implement various functionalities, Coded for Various windows, panels, form and tree components, adding custom event on components and implementing their listeners for operation to be performed.
- Developed Data Access Object pattern for maintainability and portability across different persistence frameworks.
- Experienced in front End technologies **HTML5, CSS3, JavaScript, Bootstrap, JQuery, Angular JS, ReactJS, Backbone.js, Node JS, Tag Libraries, AJAX** and **Ext Js** used for Responsive web page designing.
- Experience with **React Js** to write apps in **JavaScript** that achieve native performance on mobile devices, used **React Js** and **AJAX** technologies for front end user input validations.
- Implemented Data Transfer Object for end-to-end remote communication.
- Developed Java custom code using **Spring Boot** and **Rest APIs** to invoke external systems APIs to perform in-detail analysis and load to temporary MELD tables.
- Experience with Streaming platforms like Apache Kafka.
- Implemented Micro Services based Cloud Architecture using **Spring Boot**.
- Designed and developed **Java 8** business components and RESTful service endpoints using **Spring boot**.
- Involved in development, maintain web based application using **Struts Framework 1.3 combined with Struts Validator Framework and Tiles** for the application.
- Performed **JUnit & Cucumber** Testing
- Implemented JavaScript framework for primary validations of the web forms as well as enhancing the pages' interactivity for the users using **Ajax and JQuery**.
- Developed Kafka consumers to consume data from Kafka topics
- Strictly followed **Web 2.0** design features such as simplicity, fewer columns, separate top sections, fonts, simple navigation, logos, gradients, reflections and more.
- Implemented **Spring Framework** to loose-couple dependencies. Developed user views using Custom tags in **JSPs** and data validation using **Struts** validators.
- Used version control system - perforce visual client used and maintained maven build scripts.
- Involved in fixing bugs and minor enhancements of the modules.

Environment: Java8, java EE 5.0, JDK 1.7, JSP, Struts2, Spring boot, spring MVC, Cucumber, Spring IOC, MVC, Hibernate, OO JavaScript, Ajax, HTML, JQuery,Css, CSS3, JSON, HTML5, WSDL, ANT, Angular JS, React JS, Oracle 8i/9i/10g/11g, Oracle JDeveloper 10.3, CSS, Eclipse, Web Logic Application Server.

Client: INK IT Solutions And Consulting Hyderabad
June 2016-Sep 2017
Role: Java Developer

Description: We are a global IT consulting company that specialises in cutting-edge cloud and enterprise applications with a primary focus on SAP solutions. Established in 2014, we offer end-to-end Customer and People experiences through our SAP solutions, seamlessly integrating with other platforms.

Responsibilities:

- Excellent analytical skills, written and oral communication, and experience collaborating with multiple development teams.
- Involved in designing, developing and testing of J2EE components like Java Beans, Java, XML, **Collection Framework, JSP, spring** and Hibernate, **Perl scripting**.
- Implementing a **parallel algorithm** for reliability optimization of communication systems to avoid optimization problems and maximize efficiency.
- Used **Spring/MVC framework** to enable the interactions between **JSP/View layer** and implemented different **design patterns** with **J2EE and XML technology**.
- Involved in handling transactions using **Spring Declarative Transaction** management.
- Implemented Caching mechanism using **Spring Gem Fire** Template.
- Implemented DAO layer using different hibernate techniques like **strategies, Inheritance, annotations** and **criteria interfaces**.
- Used SOA Integration service for **Data Integration Service** and **Functional Integration Service**. Used **SOAP UI** for the functional testing and inspection and invocation of spring based **Web Services**.
- Developed and consumed **Rest Services** using **HTTP** methods such as **GET, POST, PUT** and **DELETE** for user and account **micro services**.
- **Used Hibernate ORM** which enables to write applications more easily whose data outlives the application process. As an **Object/Relational Mapping (ORM) framework**, hibernate is concerned with data persistence as it applies to relational databases
- Implemented **Spring Boot** Micro services to divide the application into various sub modules.
- Designing new components to fit in the already existing architecture using **core Java, multi-threading** different **design patterns** like the **factory method, Abstract factory pattern, Singleton**. While developing web-based applications used **Web Services**, both **SOAP/WSDL and REST**.
- Developed Web application using **Python, Perl scripting, JavaScript, AJAX, Java applets** and servlets, HTML, XML and template languages.
- Implemented **PL/SQL queries** and used Oracle stored procedures, and built-in functions to retrieve and update data from the databases. Worked on server-side web applications using **Node.js**.
- Involved in Construction of UI using **JQuery, AngularJS, Ext.js, Bootstrap** and **JavaScript, Perl scripting**.
- Involved in **Message Broker** Development using **IBM integration**, Message Sets and Message Definitions, Coded the ESQL for Message Transformation Nodes, **Eclipse, XML/XSLT and XSD**.
- Implemented **Ajax and JQuery** based navigation system visually identical to previous table-based system to improve ease of maintenance and organic search engine placement.
- Developed real time tracking of class schedules using **Node JS** (socket.io based on socket technology, Express JS framework).
- Developed the war/ear file using Ant script and deployed into **Web Sphere** Application Server.

- Developed and implemented **UI controls and APIs** with ExtJS and Coded the front-end **Ajax framework** components using **Web 2.0 JavaScript library ExtJS**.
- Developed specialized search system using **Cassandra DB, AngularJS**, Java Servlets, JUnit, Maven.
- Deployed, Managed and Monitored Cassandra DB Replica Sets / Databases. **Prototyped Mongo DB** new features across **multiple stacks**.

Environment: Java, HTML, UML, XML, AngularJS, Node JS, Servlets, JSP, EJB, JDBC, JNDI, JAXP, SQL, PL/SQL, Oracle 10g, Eclipse, Tomcat, WebSphere, JUnit, Rational Rose, Selenium.
