

ANANYA ROY

M: +1 6502910570

Email id - ananya.roy19@gmail.com**Professional Summary**

- IT Consultant with corporate experience in Software Development ranging from Requirement Specification, Programming, Installation, Upgrade and Support activities.
- Comprehensive knowledge in Database Architecture & Implementation, Data Models, Normalization & System study.
- Experienced in large volume Oracle ERP Applications (11i/R12) on 10g/11g RAC and non-RAC databases, installation, administration, troubleshooting, upgrading and tuning of 24X7 transactional environments.
- Oracle EBS upgrade from 11i to R12.2.4 and OS migration from Solaris to RHEL Linux 6.
- Installed Hyperion EPM 11.1.2.2 on distributed environment comprising components Oracle Essbase, Financial Reporting, Planning, Calculation Manager, Enterprise Performance Management Architect, Provider Services, Essbase Administrative Services, and Essbase Studio.
- EPM upgrade 11.1.2.4 from 11.1.2.2 and configured Essbase, EAS, Studio, EPMA, APS, Dimension Library.
- EPM clustering of Foundations, Essbase for high availability and Disaster Recovery.
- Oracle Data Integrator (ODI 11.1.1.7) installation, configuration and administration.
- Upgraded OBIEE from version 11.1.1.6 to patchset 11.1.1.7.140715 to two node load balanced application.
- Installation of Oracle 11g database on multiple occasions on various platforms e.g. Linux, Windows etc.
- Installation and upgrade of JDA Demand Manager 8.1 and SCM UI 8.1 installation on Windows.
- Efficient in database performance monitoring, diagnostic and tuning, backup and recovery following best practices. Knowledge on Oracle Golden Gate, ASM, RMAN and RAC administration.
- Oracle Fusion Middleware 12.1.2 installation and administration (SOA, Content Management, WebLogic)
- Administration of Oracle Identity Management 11g (OID/OAM/OIM) and Oracle Single Sign-On (SSO), Active Directory integration (LDAP), OIM support, ticket triaging, database compliance and application support.
- Resolve severity incident (mission critical, business loss situation) through BMS Remedy, TeamTrack within SLAs.
- Expertise on DB Administration, Backup-Recovery, Performance Tuning, Root Cause Analysis, Data Migration, Code Migration, Upgrades, Cloning and Patching with minimal downtime.
- Troubleshooting issues related to apache, web server, web listener, forms and reports, concurrent managers, printer.
- Monitor database alert log files, taking database backup, data block corruption, segment fragmentation, performance issues, security threats, contention issues (deadlocks, I/O, memory, CPU).
- Configured Parallel Concurrent Processing (PCP) on Oracle Applications 11.5.10.2.
- Professional approaches on deadlines with good interpersonal communication skills and proper analytical skills paired with amicable attitude.
- Named as “Outstanding Contributor for Quarter (Jan-Mar 2014)” at Symantec Corporations. Recognized for “Sole Contribution” during Hyperion 11.1.2.2 Installation (March-April 2015) and Upgrade project 11.1.2.4 (March 2016) at Marvell Semiconductor.

Technical Competencies

Oracle Applications	E Business Suite 11.5.10, 12.1.3, 12.2.4
Oracle Fusion Middleware	Oracle WebLogic server 11g/12c, Oracle Fusion SOA 11g
Oracle BI/Hyperion	Oracle EPM suite 11.1.2.2, 11.1.2.4, OBIEE 11.1.1.7
Databases	Oracle 10.2.0.5, 11.2.0.3
Operating Systems	Unix Solaris, Red Hat Linux (RHEL), Oracle Linux, IBM AIX
Oracle Tools & Utilities	Oracle DG, RMAN, OEM, ODI
Third Party Tools	Toad, Oracle SQL Developer, WinSCP, Putty,

Education Qualification

- Bachelor of Technology – Information Technology (IT), India

Client Name: **MARVELL SEMICONDUCTOR, Santa Clara, CA**

Duration: June 2014 to present

Application Technology/Platform: Oracle Apps R12 (12.2.4), Red Hat Linux (RHEL 6), Oracle Linux, Solaris

Database: Oracle Database 11g Enterprise Edition Release 11.2.0.3

Project Summary: Marvell Semiconductor is an innovative company dealing in the manufacture of storage, communications and consumer semiconductor products. Out of a number of ongoing projects, my major involvement was in Oracle Hyperion installation on a heavily intricate, complex and distributed architecture. OBIEE and ModelN upgrade were some of the major projects. Apart from these, there was regular DBA support of production and non-production environments.

Responsibilities as Oracle Apps DBA/Hyperion Administrator:

- Oracle EBS application R12.2.4 upgrade from 11.5.10.2 along with OS migration from Solaris to Linux, resolving post upgrade issues. Worked with application teams for Custom migrations and fix changes in packages, procedures arising due to upgrade and platform migration.
- Hyperion Enterprise Performance Management (EPM version 11.1.2.2) installation and configuration on distributed architecture. Components include Oracle Essbase, Financial Reporting, Planning, Calculation Manager, Enterprise Performance Management Architect, Provider Services, Essbase Administrative Services, and Essbase Studio. Issue resolution on performance, monitoring, backup and restoration. Oracle Data Integrator (ODI version 11.1.1.6.004) installation and configuration. Oracle Process manager (OPMN) and Oracle HTTP Server (OHS) configuration. Active Directory (AD) configuration.
- Upgrade EPM 11.1.2.4 from 11.1.2.2 and resolve post installation issues. Configure Smart View, Studio, EAS console.
- Clustering EPM Foundations managed servers, Essbase for high availability and disaster recovery.
- Automated metadata attribute changes through ODI interface, packages and schedule daily refresh of Planning application through ODI packages.
- OBIEE upgrade from version 11.1.1.6 to 11.1.1.7.140715 on a load balanced application environment and resolved related issues raised during upgrade.
- ModelN Revenue Management upgrade from version 8.3.1.1 to 8.3.2.2 and resolved issues raised during upgrade.
- Installation and upgrade of JDA Demand Manager 8.1 and SCM UI 8.1 installation on windows 2008 server.
- Oracle Fusion Middleware WebLogic 12.1.2 installation and domain creation. Administration and maintenance of managed servers. Performance tuning – JVM parameters, memory leak, garbage collection, heap dump, out of memory, stuck thread analysis.
- Monitoring Data Guard replication and checking alerts to make sure DG lag is being satisfied.
- Oracle Flow Builder (OFB version 12.5) installation, configuration and administration.
- Troubleshooting issues related to Concurrent programs, Workflow Notifications Mailer, Roles and Responsibilities, SSO access, administering Concurrent Managers, monitoring network for latency.
- Administering applications on WebLogic and Oracle database, Identity and Access Management (OIM/OAM), Oracle Internet Directory LDAP (OID), Active Directory (LDAP) Ticket triaging, SSO integration with Oracle ERP.
- Applying patches (adop, adpatch) to Oracle Applications, cloning supporting instances to maintain a fresh copy of production.
- Performance tuning of applications and databases of EBS, OBIEE, EPM Hyperion environments.
- Running database backup using EXPDB/IMPDB and EXP/IMP utilities. Also, scheduling scripts as cronjobs.
- QA activities and change management using version control and performing database administration support.

Client Name: **SYMANTEC CORPORATION, Mountain View, CA**

Duration: May 2013 to May 2014

Application Technology/Platform: Oracle Apps R12 (12.1.3), Red Hat Linux, AIX

Database: Oracle Database 11g Enterprise Edition Release 11.2.0.3

Project Summary: Symantec Corporation is a security, backup and availability solutions software company. Symantec's products and services protect people and information in any digital environment from the smallest mobile device, to the enterprise data center, to cloud-based systems against advanced threats and vulnerabilities. Da-Vinci was the Oracle R12 implementation project which consisted of 22 DBAs relentlessly supporting the Production environments which included

Oracle Identity management, EBS, SOA/WebLogic, Oracle Governance, Risk, and Compliance (GRC/CCG), Thomson Reuters's Sabrix.

Responsibilities as Oracle Apps DBA/WebLogic Administrator:

- Oracle apps database administration for several Oracle instances on Red Hat Linux/AIX environment including resolve performance issues, provide SYSADMIN support, code migration, proactive monitoring of applications and database.
- Monitor performance of databases using OEM Grid Control to improve database and application availability.
- Troubleshooting issues related to Concurrent programs, Workflow Notifications Mailer, Roles and Responsibilities, SSO access, administering Concurrent Managers, monitoring network for latency.
- WebLogic administration, monitoring and troubleshooting using Admin console, performance tuning – JVM parameters, memory leak, garbage collection, heap dump, out of memory, stuck thread analysis.
- Administering applications on WebLogic and Oracle database, Identity and Access Management (OIM/OAM), Oracle Internet Directory LDAP (OID), OIM support, ticket triage, application support and database compliance.
- Manage WebLogic JDBC components, such as connection pools and data sources, as required by database.
- WebLogic performance tuning of JVM heap size, garbage collections, java stack and native thread.
- Setting up multiple domains, including Admin Servers, Managed Servers, Node managers in cluster environment, Design Security strategy – use of SSL/Firewalls between tiers, implementing security policies on LDAP
- Enabling trace and TKPROF on concurrent programs for performance statistics and query execution path.
- Develop and update business logic store in database using PL/SQL triggers, packages, procedures functions. Administer all database objects, including tables, clusters, indexes, views, sequences, packages and procedures.
- Running AWR, ADDM, ASH reports to maintain statistics and diagnose performance issues.
- Cloning, patching of oracle instances on regular basis.
- Resolving issues that arise during testing or code deployment process.
- Monitoring the access logs, error logs, alert logs fixing the problems and tuning memory parameters.
- Scheduling concurrent programs and proving the application users with log files and resolving issues. Managing users and resources, controlling user privileges and roles.
- Troubleshooting: memory issues, deployment issues, performance issues, SSL issues, Jvm crashes.

Projects under Tata Consultancy Services

Client Name: **CISCO SYSTEMS INC, San Jose, CA**

Duration: January 2012 to September 2012

Application Technology/Platform: Oracle Apps 11i, r12, Red Hat Linux

Database: Oracle Database 10g Enterprise Edition Release 10.2.0.5.0 and 11g

Project Summary: Cisco is the worldwide leader in networking that transforms how people connect, communicate and collaborate. A team of 18 DBAs were responsible of supporting 150+ Oracle ERP release environments ranging from cloning, upgrading, patching to general troubleshooting through a system of trouble tickets called cases. Each DBA was assigned a number of cases which were to be taken care within SLA and provide an RCA for the same. There was immense scope of learning new concepts and test the functionality. The project exposed the DBAs to a variety of mission critical issues which were a perfect platform of gaining expertise on database administration of Oracle instances as a whole.

Roles & Responsibilities as Oracle Apps DBA:

- Support multiple oracle instances in high availability environment with Load Balancer and RAC configured in Production, Quality, Development and Release instances.
- Monitor incident ticket queue and troubleshoot and resolve database incidents within SLAs and provide DBA support to more than 150 ERP environments
- Alert log monitoring and checking for ORA-exceptions and subsequent resolution.
- Performance optimization using SQL Trace/tkprof for user sessions.
- Tablespace monitoring; resolving issues related to datafiles, tempfiles and managing space on disk.
- Gather statistics to quantify data distribution and analyzing tables and indexes using dbms_stats package to generate statistics.
- Monitor database and server performance and identify current and future potential bottle-necks

- Improve application run time by building optimal indexes, gathering object statistics, analyze objects and using parallel query. Managing schema objects, scheduling standard house-keeping jobs on schemas.
- Managing ARCHIVELOG mode on the databases and applying filled redo logs to Standby database.
- Creating and managing database objects like tables, views and indexes and re-validating invalid database objects.
- Defining new concurrent programs and managers, assigning work shifts and specialization rules.
- Managing users and resources, controlling user privileges and roles.
- Employing password management, including account locking, password aging and expiration, password history, and password complexity verification.
- Creating and maintaining database links, compiling invalids.
- Oracle SYSADMIN activities such as user creation, responsibility addition, registration of new application, menu creation. Checking for workload, processes consuming more resources on server and troubleshooting for operating system health issues.
- Participation in an on-call rotation to provide 24X7 DBA support

Client Name: TEREX CORPORATION, Westport, CT

Duration: April 2011 to December 2011

Application Technology/Platform: Oracle Apps 11i, Sun Solaris

Database: Oracle Database 10g Enterprise Edition Release 10.2.0.4.0

Project Summary: Terex is a diversified global manufacturer of a broad range of equipment that is focused on delivering solutions for many applications including construction, infrastructure, quarrying, mining, shipping, and transportation and manufacturing industries.

Roles & Responsibilities as Oracle Apps DBA:

- Support multiple oracle instances in high availability environment with Load Balancer and RAC configured in Production and Quality instances.
- SYSADMIN responsibilities such as user creation, responsibility addition, registration of new application, menu creation.
- Running post cloning checks on the instances and ensuring working condition before release.
- Patch analysis, applying patches (one-off, mini_packs, developer 6i patches, ad-tech-stack patches) and checking the patch impact.
- General troubleshooting and ensuring smooth running of Applications servers such as web server, forms server, concurrent processing server.
- Monitoring concurrent programs and report generation and resolving issues relating to them.
- Monitoring Workflow Mailer in Production and startup any failed job or notify the application users for appropriate action.
- Scheduling concurrent programs and proving the application users with log files and resolving issues related to these.
- Custom code migration to ERP instances.
- Printer administration and registering new printers under Oracle Applications.
- Gathering statistics on custom schema using DBMS_STATS, FND_STATS and analyzing tables for cost optimization and performance tuning.
- Identifying deadlocks on database by user sessions. Managing and resolving blocking sessions.
- Pinning PL/SQL objects in Oracle shared pool using DBMS_SHARED_POOL package using keep and unkeep procedures.
- Employing security for user management, passwords, roles, auditing and authentication.
- Managing front-end application users, responsibilities, and data groups.
- 24X7 DBA monitoring and ensure availability of all ERP instances before start of business every single day.

Client Name: RURAL ELECTRIFICATION CORPORATION (Govt. Of India), New Delhi, India

Duration: July 2010 to March 2011

Technology/Platform: Oracle Apps 11i, Database 10.2.0.4, IBM/AIX

Project Summary: Rural Electrification Corporation Limited is an Infrastructure Finance Company in India's power sector. The company finances and promotes rural electrification projects across India, operating through a network of 13

Project Offices functioning under the purview of the Ministry of Power – Government of India. The project was an ERP implementation for RECL in Oracle Applications 11i with 10g Database. A team of 2 Database Administrators supported a total of 8 production and non-production instances and were responsible for daily monitoring of the databases.

Roles & Responsibilities as Oracle Apps DBA:

- Support multiple oracle instances in high availability environment with Load Balancer and RAC configured in Production.
- Configured PCP, Load Balancing on two node middle-tier Oracle Application.
- Tuning Concurrent Managers, defining Work Shifts, configuring specialization rules, defining primary & secondary nodes for PCP setup.
- Upgraded database 9.2.0.8 to 10gR2 manually using SQL scripts and utilities. Then subsequently upgraded database from 10.2.0.4 to 10.2.0.5 and resolved issues post-upgrade.
- Cloning Oracle Applications and Database from production to non-prod instances.
- Patch analysis, applying patches (one-off, mini_packs, developer 6i patches, ad-tech-stack patches).
- Performing backup by scheduling scripts on crontab and recovery of instance.
- Identifying LOCKS on any table and resolving by killing the sessions causing temporary delay.
- Monitoring and tuning applications using SQL Trace facility and TKPROF at user session or concurrent program level.
- Maintenance included relinking applications objects and regeneration of forms and reports using AD utilities ad autotocfg, adctrl, adadmin, and adpatch etc.
- Managing database objects like tables, views and indexes and re-validating invalid database objects. Registering custom Forms and Reports under Oracle Applications.
- Performing SYSADMIN activities like enabling and disabling traces on concurrent programs, workflow administration, assigning menus and responsibilities to users.
- 24X7 DBA monitoring and ensure availability of all ERP instances.

Client Name: NEW INDIA ASSURANCE, Mumbai, India

Duration: March 2010 to June 2010

Technology/Platform: Oracle Apps R12, Sun Solaris

Project Summary: New India Assurance is the largest private organization under Insurance domain in India. The project was an ERP implementation in Oracle Applications (Release 12) with 10g Database. A team of 2 Database Administrators used to support a total of 3 production and non-production instances.

Roles & Responsibilities as Oracle Apps DBA:

- Support multiple oracle instances in high availability environment with Load Balancer and RAC configured in Production.
- Cloning Oracle Applications and Database from production to non-prod instances.
- Troubleshooting general issues related to user access, login, failed jobs and performance tuning.
- Maintenance included relinking applications objects and regenerating forms and reports using all AD utilities adautocfg, adctrl, adadmin, admrgpch, adpatch etc.
- Concurrent Manager tuning to support proper functioning of Production during huge month end commission release activities. Monitoring alert.log for ORA-exceptions.
- Identifying failed or long running concurrent programs and assigning them to custom Concurrent Manager.
- Managing concurrent manager, assigning work shifts, specialization rules, cache size, sleep seconds.
- Daily monitoring of ERP instances before start of business to ensure database availability.
- Checking availability and smooth functioning of listener, concurrent managers, Apache.
- Managing and administering users, profiles, roles and privileges according to requirement. Tablespace monitoring and addition of datafiles and tempfiles.
- Enabling and disabling ARCHIVELOG mode on the databases and applying filled redo logs to Standby database.
- Gathering table statistics on schema and working on database optimization.
- Performance tuning by SQL trace/tkprof and enabling trace for custom programs and providing the tracefile.

Client Name: HINDUSTAN COPPER LIMITED (Govt. of India), Kolkata, India

Duration: December 2008 to February 2010

Platform/Operating: Oracle Apps 11i, Sun Solaris

Project Summary: It is an ERP implementation project for HCL (Hindustan Copper Limited) in Oracle Applications (Release 12). It includes the implementation of Oracle Products like Purchasing, Payables, Fixed Assets, Order Management, General Ledger, Receivables, Advanced Supply Chain and Planning, HRMS, Quality, Training and Learning Management, Inventory etc.

Roles & Responsibilities as Oracle Apps DBA:

- Proactive monitoring of Production database for tablespace sizes and database growth.
- Migration of Oracle EBS 11.5.10.2 to 12.0.6 and resolved issues post upgrade.
- Coordinating with Oracle on Service Requests for resolving critical issues.
- Standard DBA support include activities cloning, patching, SYSADMIN responsibilities. Creating and maintaining users, responsibilities, menus, functions, assigning system profiles.
- Custom form registration and Report registration under Oracle Application.
- Managing the Concurrent Managers and its operations like starting, stopping the concurrent managers, re-schedule requests, purging the concurrent requests historical data, tuning of concurrent managers and monitoring of the concurrent manager operations.
- Monitoring alert log and checking for ORA-exceptions. Resolving database storage management issues.
- Detecting and resolving database deadlocks by terminating user session. Performance monitoring of SQL queries by enabling trace and providing tkprof.
- Creating user accounts and appropriate privileges and maintaining database security by employing password restrictions by using profiles.
- Tablespace management using OAM and addition of datafiles and tempfiles. Managing database objects like tables, views and indexes. Compiling invalid database objects under APPS and custom schemas.
