CERTIFICATIONS

Salesforce Certified Platform App Builder • Salesforce Certified Administrator
Salesforce Certified Platform Developer • Salesforce Certified Sales Cloud Consultant
Configure Price Quote

PROFESSIONAL EXPERIENCE AND ACCOMPLISHMENTS

Apttus, San Mateo, CA – March 2016 to present

Director, Platform and Integration, Strategic Solutions Group

Responsible for enabling architects and developers implement Configure Price Quote (CPQ) and Quote-to-Cash (QTC) applications in an efficient and scalable manner on Microsoft Azure platform.

- Develop creative microservices-based interim solutions to meet customers' needs on Microsoft Azure while other teams work on longer-term solutions on Apttus Intelligent Cloud (AIC) on Azure
- Liaise with Product Management teams on defining and prioritizing requirements for AIC Platform
- Coordinate with globally distributed agile development teams on implementation of requirements
- Solve architectural challenges in Azure platform to achieve parity with Salesforce platform
- Increased performance by 450% in pricing with new algorithm optimized for SAP price conditions
- Increased performance by 200% to 300% in areas including integration and user interface

As Enterprise Architect, and later as Manager and Director architected, developed, led, and implemented suite of solutions including CPQ and QTC applications at various clients including ExxonMobil.

- Developed elegant and scalable solutions to meet customers' needs in CPQ on Salesforce platform
- Integrated CPQ on Salesforce and AIC platforms with enterprise applications including SAP
- Won MVP Award for selecting, implementing and promoting systems to improve scalability

- Published best practices for integrations, performance analysis and improvements, and many topics

Consultant – Salesforce.com & Force.com, Palo Alto, CA – March 2014 to March 2016

Analyzed clients' requirements, and designed and developed custom applications on Force.com.

Client: Model N – Developed modules for product configuration model management, and service contract life-cycle management for CPQ application using Apex, Visualforce and triggers.

Client: Rimini Street – Integrated Salesforce CRM with custom solutions for managing projects for onboarding clients. Utilized Apex triggers and workflows to automate creation of projects, tasks and schedules based on templates. Resulted in 60% increase in capacity in onboarding new clients.

Client: Covance Food Solutions – Designed and developed task and time management solutions on Force.com using custom objects and Apex. Leveraged EXT JS JavaScript framework to create single page application to reduce time entry by a factor of 10 over standard Visualforce pages.

Avata Technologies Corporation, Santa Clara, CA – July 2008 to March 2014

Head of Software Development and Implementation

As an OEM partner of Salesforce.com, conceived, developed, and implemented enterprise applications on Force.com platform to simplify product and project management, integrated with salesforce CRM. Leveraged declarative and programmatic capabilities of Force.com to increase overall productivity.

- Implemented Salesforce CRM along with custom product configuration and project management solutions for an automotive OEM component manufacturer
- Developed managed package solutions and package extensions using Visualforce, Apex, SOQL and SOSL queries, as well as triggers, workflows, email templates, roles, profiles and permission sets
- Increased productivity by nearly 50% at a consumer goods market research firm by integrating consumer survey, project management and CRM applications
- Architected single-page applications using Ext JS JavaScript framework and jQuery
- Recruited and led team of developers and engineers as hands-on manager and leader
- Designed project management tools for managing waterfall and agile software methodologies
- Built content management system on Amazon Web Services, and analytics with Google

Trazar Corporation, Santa Clara, CA – April 2001 to July 2008

Head of Engineering & Operations

Promoted to lead the company through restructuring and revival and to develop and execute strategic alternatives while continuing to lead engineering and new product development efforts.

- Executed key product development, business, and corporate initiatives to improve profitability
- Established strategic alliances and licensing agreements, and sold the operations

As Head of Engineering, directed a team of hardware, software, and mechanical engineers and designers to develop RF plasma subsystems for semiconductor wafer processing equipment.

- Created models using Mathcad and MATLAB to reduce system design time by more than 60%
- Developed embedded software for motion control system and electronic instruments
- Introduced new products and increased the number of major customers by 75%

EDUCATION

Master of Business Administration – Executive MBA - Arizona State University, Tempe, AZ

Master of Science in Mechanical Engineering - University of Kentucky, Lexington, KY
