

SUMMARY

- Over 6+ years of experience in Analysis, Design, Development, Implementation, and Maintenance of applications using Java/ J2EE, UI Technologies like Servlets, JSPs, Hibernate, SpringDI, Struts, and JPA with knowledge of SDLC concepts.
- Deployed and Configured Java/J2EE application in LINUX environments.
- Expertise with spring, Hibernate, and Struts application frameworks.
- Worked on Spring modules like Spring Boot, IoC(DI), JMS Template, JDBC Template, Integration with Hibernate, Spring MVC.
- Developed REST Web services using Spring and Jersey Frameworks(JAX-RS).
- Very Strong conceptual and hands-on programming skills on Collections, Multi-Threading, Garbage Collection, Exception Handling, OOPs concepts in Core Java
- Proficient in Java/J2EE Design Patterns including singleton, Model View Controller (MVC), and Data Access Object (DAO)
- Expertise in Client-Side designing and validations using HTML5, CSS3, JavaScript, and JQuery.
- Experience in designing User Interface applications and web applications using HTML5, CSS3, JavaScript, jQuery, AJAX, JSP, JSON, Bootstrap and Angular JS & 2, 6.
- Work experience in using XML technologies like XSL/XSLT, SAX, DOM, SOAP, WSDL, DTD, SOA, JAXB, JAXP, and Custom Tags.
- Good experience working with High Traffic Websites.
- Good knowledge of JavaScript, MVC/MVP frameworks such as ReactJS, AngularJS and BackboneJS.
- Hands-on experience on Concurrent Version Systems such as CVS and SubVersion.
- Very good at learning and adapting to emerging technologies in the work area.
- Experience in handling messaging services using Apache Kafka.
- Experience in software configuration management using Rational IBM Clear Case, SVN.
- Highly motivated, analytical problem solver and troubleshooter with strong attention to detail.
- Quick learner and proficient in solving the technical issues in the project.
- Highly passionate and curious about new Front-End development technologies and has the ability in mastering them with a keen awareness of new industry developments.
- Experience in implementing the various services using Microservices architecture in which the services working dependently, implemented Spring Boot Microservices to divide the application into various sub-modules.
- Experience using Fuse/Apache ServiceMix as an integration platform and Apache ActiveMQ as a messaging platform.
- Excellent interpersonal abilities, communication skills, time management, and team skills with an intention to work hard to attain project deadlines under stressful environments.
- Expertise in deploying enterprise applications on WEB/Application servers like IBM WebSphere, Jboss, Apache Tomcat, and WebLogic.
- Experience in coordinating system test activities and implementing the change management process.
- Wrote DAO classes in the persistence layer using Spring and Hibernate for DB interactions.
- Extensive experience in Spring Framework along with Hibernate for managing the Database interactions.

SKILLS:

Programming Languages	Java/J2EE, SQL, PL/SQL, C, C++
Operating Systems	Win XP/Vista/7/8, Linux.
Java/J2ee Technologies	Java, JDBC, JNDI, Servlets, EJB, JSP, JSTL, Struts, Spring, Hibernate, XML (DOM, SAX), Web Services, SOAP, RESTful, WSDL.
Web Technologies	JavaScript, AngularJS, Backbone JS, XML, HTML5, CSS3, XHTML, XML Schema, DHTML, JSON RPC, AJAX, jQuery, WebSocket, Angular JS &6, XSL, XSLT, SED, DTD.

RDBMS	Oracle, MySQL, SQL Server, DB2
Application Server	WebLogic, Tomcat, WebSphere, JBoss
Tools	Toad, SQL Developer, SQLplus
Framework	Struts, Spring, Work-Flow, Hibernate.
Design Tools	Rational Rose, MS Visio
Version Control	ClearCase, CVS, SVN, GIT, Code Cloud.
Message Brokers	Kafka, RabbitMQ, ActiveMQ.
IDE	Netbeans, Eclipse, RAD, IntelliJ

Professional Experience:

E&Y, Alpharetta, GA
Java Full Stack Developer

May 2019 till date

Responsibilities:

- Responsible for supporting existing applications and development of new applications.
- Implemented the online application by using Core Java (OOPS), JDBC, JSP, Servlets, Web Services, SOAP, Restful, and WSDL.
- Enhanced certain modules of web portal using Spring Framework 4. And developed web and service layer components using Spring MVC.
- Developed web service for web store components using RESTful API using Spring Boot.
- Used AWS EC2 for cloud deployment configurations.
- Integrated with Hibernate and Spring and to perform DAO operations.
- Working experience with Typescript features. Used webpack, babel, and gulp for transpilation.
- Created Typescript reusable components and services to consume REST API's using Component-based architecture provided by Angular 6.
- Setup and build AWS infrastructure various resources, VPC EC2, S3, IAM, EBS, Security Group, Auto Scaling, and RDS in Cloud Formation JSON templates.
- Developing and maintaining applications written for Amazon Simple Storage Service, Amazon Ec2, Amazon Simple Queue Service, Amazon Simple Notification Service, AWS CloudFormation.
- Played a key role in selecting appropriate AWS services based on data, compute, database, or security requirements.
- Design AWS Cloud Formation templates to create custom sized VPC, subnets, NAT to ensure successful deployment of Web applications and database templates.
- Used JQuery extensively for event handling, DOM manipulation, and cross-browser compatibility.
- Implemented SOA architecture with web services using SOAP, WSDL, and XML.
- Extensively used XSD for validations of XML transfer to the different Web Services.
- Developed XSD for validation of XML request coming in from Web Service.
- Creating new billing features in JSF for internal users and Ops.
- Maintenance and L3 production support for Backbone and JSF apps.
- Provided round the clock support on the Mobility All Access Gateway Application.
- Involved in Development activity for multiple user stories.
- Responsible for monitoring the application in various environments (Ex. Updating properties, checking logs, cleaning archived data, environment upgrades, etc)
- Worked with various DB environments in accessing application data. Wrote complex queries to fetch the required data.
- Had knowledge of Kibana and Elastic search to identify the Kafka message failure scenarios.
- Worked on Application Configuration enhancements to adhere to various external dependencies. Expertise in deploying a web application using Web/Application Servers like Apache Tomcat, WebSphere Application Server.
- Provided immediate solutions to user concerns on multiple occasions.

- Developed database schema and populating data using SQL and HQL statements, PL/ SQL functions, stored procedures, triggers, and bulk uploads.
- Involved in configuring and modifying the JENKINS build and deploy jobs. Also involved in integrating code plugins.
- Used Spring JMS API and ActiveMQ API to send messages to the message broker.
- Developed pom.xml for the build of the application using Maven.
- Worked with Toad to overlook databases and create SQL queries to gather and alter data. Also combined with Hibernate for testing the flow of data from the Application to Database.
- Worked on Unit Testing and Integration Testing of the application.
- Experience in handling messaging services using Apache Kafka.
- Good Knowledge on Junit for Unit testing and Maven and Ant for project building tool.
- Used Log4j for Logging various levels of information like error, info, debug into the log files.
- Interacted with the user group frequently to discuss user requirements and questions/issues.
- Worked in an AGILE environment with a 2-week sprint using JIRA.
- Involved in all project phase discussions and executed project from PDP (predefined phase) to rollout phase with post-implementation activities.
- Developed various activities like transaction history, search products that enable users to understand the system efficiently
- Involved in unit testing using JUnit and system testing and also responsible for preparing test scripts for the system testing.

Environments: Java, J2EE, Angular 6, AWS, RESTful, WSDL, JSP, Servlets, Toad, Kafka, Oracle 12g, PL/SQL, ANT, XML, JIRA, Agile, ADF, SVN, SOAP, Spring, Hibernate, Maven, Windows OS, Log4j, ActiveMQ, Apache tomcat, websphere, Linux, Unix, SQL

Kaiser Permanente, Rancho Cucamonga, CA
Java/J2EE Developer

Jan 2018 to Apr 2019

Responsibilities:

- Elaborated Use Cases based on business requirements and was responsible for the creation of Class Diagrams, Sequence Diagrams.
- Created the Technical design document (TDD).
- Developed user interfaces using JSPs, HTML, XHTML, DHTML, CSS, Java Script, JSP Custom Tags.
- Developed Asynchronous means of retrieval of data from the Server and Database using AJAX features as well as JavaScript.
- Implemented the application using Spring MVC Framework.
- Developed Java Classes for implementation of Persistence of objects and Caching of Data using Hibernate.
- Developed code using various patterns like Singleton, Front Controller, and Value Objects, Service Locator.
- Used Spring Framework at Business Tier and also Spring's Bean Factory for initializing services.
- Extensively used Core Java such as Multi-Threading, Exceptions, and Collections.
- Designed WSDL's and elaborated type definitions schemas based on corporate standards, integration, and security specifications
- Real-time streaming the data using Spark with Kafka
- Implemented the Web Services and associated business modules integration.
- Tested JSPs in Firefox and Internet Explorer browsers. Identified and fixed browser-related issues.
- Used ANT script to compile and build the WAR.
- Configured the WebLogic handler for the Apache Web Server to serve static files (JS, HTML, images, and CSS).
- Developed SQL Statements, as well as PL/SQL, Stored Procedures for searching contractors depending on Selection Criteria.
- Implemented the various services using Microservices architecture in which the services working dependently
- Implemented Spring Boot Microservices to divide the application into various sub-modules.
- Converted a monolithic app to microservices architecture using Spring Boot using 12-factor app methodology. Deployed, Scaled, Configured, wrote manifest file for various Microservices in PCF.

- Implemented the function to send and receive AMQP messages on RabbitMQ synchronously and asynchronously, and send JMS message to Apache ActiveMQ on the edge device.
- Developed Servlets for Document Upload, Image Streaming, and Caching the data.
- Development and Integration of the Application using Eclipse IDE and used StarTeam as Version Control Tool.
- Involved in the full system life cycle and responsible for Developing, Testing, Implementing.
- Involved in Unit Testing, Integration Testing, and System Testing, etc.
- Used Spring framework in the development of a business bean and to interact with the Hibernate ORM tool
- Experience in implementing Web Services in order to communicate between different distributed components using SOAP Protocol using Apache Axis.
- Designed and developed RESTful web services that support JSON for other developers to access to speed up development using Spring MVC, Spring Boot, Web Services, JSON, Log4j, RESTful, MySQL, and Maven.
- Developed JavaScript validation for client-side validations. Performed Code reviews and code fixes.
- Used Log4J to store log messages.
- Working with Shells

Environments: Java, J2EE, RESTful, WSDL, JSP, Servlets, Toad, Oracle 12g, PL/SQL, ANT, XML, JIRA, Agile, ADF, SVN, SOAP, Spring, Hibernate, Maven, Windows OS, Log4j, Apache tomcat, websphere, Linux, Unix, SQL, Kafka, Cassandra.

American Express, Phoenix, AZ
Java/J2EE Developer

Jan 2017 to Dec 2017

Responsibilities:

- Implemented the online application by using Core Java (OOPS), JDBC, JSP, Servlets, Web Services, SOAP, Restful, and WSDL.
- Tested the web services with SOAP UI tool prepared program and system specifications for web project development
- Build the prototype for the application and user end screens
- Adopted SPRING MVC framework in web application development
- Front end was developed using JavaScript, XHTML, JSP, CSS
- Developed JavaScript to perform client-side validations and client forms
- Created web services and SOAP/WSDL was used as a part of web service implementation
- Spring Framework was used to design and implement a domain layer based on Aspect-Oriented Programming AOP and inversion control IOC
- JMS was used to handle the transfer of asynchronous messages using the publish/subscribe model
- Involved in performing client-side validation using JQuery and server-side validation using struts 2 validation framework
- Interacted with Oracle database through Hibernate
- Worked on Java and JSON, to interact and get the data from CSV files as we are prototyping the user experience
- Retrieved data from Oracle database through SQL commands and stored procedures
- Planned and created test plans and integrated testing in Junit
- Good experience working with High Traffic Websites.
- Used Apache Camel Integration pattern.
- Used XML configuration along with Apache Camel.
- Implemented Spring MVC controllers like Controller, Simple Form Controller.
- Implemented Spring MVC framework in the presentation tier for all the essential control
- Implemented MyBatis ORM tools to automate the mapping between SQL databases and java objects
- Worked with the testing team in fixing bugs and failed test scripts in QA and UAT
- Used Eclipse as a development IDE for the web application.
- Extensive knowledge in HTML, CSS-hand-coded, cross-browser (no tables for non-tabular data).
- Good Understanding of Document Object Model (DOM) and DOM Functions.
- Expertise in Client Side designing and validations using HTML4/HTML5, CSS3, JavaScript and JQuery.
- Good Knowledge of Search Engine Optimization (SEO) techniques.

Environment: Java, JSF, Tomcat Web Server, J2EE, Hibernate, Oracle, JSON, HTML, SQL, Spring, Struts, JUnit, Eclipse, UNIX, Windows, PL/SQL, SOAP, WSDL

Synechron, Pune, India
Java Developer

Aug 14 – Dec 16

Responsibilities:

- Involved in the Software Development Life Cycle phases like Requirement Analysis, Implementation, and estimating the timelines for the project.
- Responsible for transforming design mock-ups to W3C standards compliant HTML pages using XHTML, CSS, JavaScript, and JQuery, XML and XSLT.
- Involved in developing the UI pages using HTML, DHTML, CSS, JavaScript, JSON, JQuery, and Ajax.
- Developed presentation-tier JSP pages in HTML, Implemented JQuery Data Grid control, Validation control, and other Widget controls.
- Developed Web forms/user interfaces using Struts MVC, JQuery, and JSP.
- Used Ajax Controls, Web forms, JavaScript, and HTML for Commission, Payment, and Inventory reports.
- Worked on AJAX controls like Update Panel to manage the postback of the web page to the server, AJAX Script Manager and Script Manager Proxy control to register JavaScript and web service files.
- Used JavaScript accordingly for validation purposes, browser detection, and controls.
- Developed various AJAX controls and widgets to build a rich User Interface for the application.
- Created Windows services to create automation processing of XML.
- Used Cascading Style Sheets (CSS) to maintain design consistency across all web forms.
- Involved in developing jQuery and AJAX wrapper classes for fast retrieval of data and animations.
- Created Model objects using Entity Data Model with Entity framework using Hibernate.
- Worked with XPath, XML Node, XML Data documents to synchronize with the dataset.

Environment: JavaScript, CSS, HTML, JQuery, XML, XPath, AJAX, MVC, Junit, Oracle, Windows.
