Contact: +1 507-307-7237

Sr Java Full Stack Developer .

Summary:

- 8+ years of working experience in analysis, development and testing of Web based, Client/Server and Distributed applications across the entire Software Development Life Cycle using Java and J2EE Technologies.
- Worked on advanced software development methodologies such as JIRA, Agile/Scrum and Waterfall processes.
- Extensive experience in developing web interfaces using HTML5, CSS, JavaScript, JQuery, AngularJS, JSON EXT-JS and Bootstrap.
- Implemented Micro services architecture using Spring BOOT enabled REST API with the Spring Cloud modules.
- Strong knowledge in developing SOA processes in TIBCO
- Hands on experience in developing Single Page Applications (SPA) using AngularJS.
- Extensive experience in designing and developing Enterprise Applications for J2EE platform using Core Java, Servlets, JSP, JDBC, JMS, Swing, Struts 2.0, Spring, Shell Scripting, Hibernate, SOA, WebServices, NetBeans, Eclipse, ANT.
- Strong experience in Spring, Spring Boot, Hibernate, iBATIS, JUnit, JQuery etc. application frameworks
- Implemented REST Microservices using spring boot. Generated Metrics with method level granularity and Persistence using Spring AOP and Spring Actuator.
- Experience in developing scalable solutions using **NoSQL databases CASSANDRA, MongoDB**
- Experience with Design, code, and debug operations, reporting, data analysis and web applications utilizing Python
- Exposure to new features and issues addressed in Angular 4.
- Strong experience in Spring Framework such as Spring MVC, IOC, AOP, DI, Spring Boot, Spring Aspects, REST, Spring Integration, Spring Testing and Spring JDBC.

- Strong hands-on experience
- 2 with Spring IO, SpringBoot implementing REST.
- Good knowledge in spring framework - Spring IOC, Spring MVC, spring AOP and Spring Web flow.
- Extensive experience in testing on multiple operating systems including Linux, Unix Sun Solaris, and Windows.
- Adept in designing and developing spring, Struts, MVC, Java/J2EE based framework.
- Very strong Business Modeling skills using Rational Unified Process, OOAD and UML.
- Extensive experience in various agile methodologies like Test Driven Development (TDD), SCRUM, and Pair Programming.
- Experience in Enterprise Integration Development tools like Mule ESB, Spring Integration, JMS, WebServices, Apache Kafka and Apache Camel
- Proficient in using Struts framework and design patterns like Singleton, DTO, DAO, Factory, Session Facade, Front Controller and Service Locator.
- Configured Data Source on WebLogic Application server for connecting to Oracle, DB2 Databases.
- Hands on experience in working on XML Suite of technologies (XML, XSD, DTD, XML Schema, DOM).
- Expertise in developing WebServices with XML based protocols such as SOAP and WSDL.
- Hands on experience in developing Single Page Applications (SPA) using AngularJS
- Experienced in RDBMS Design, ER modeling, SQL, PL/SQL, procedures, cursors, functions, triggers.
- Extensive experience with IBM Web Sphere Server, BEA WebLogic, JBoss & Tomcat server.
- Expert in Core Java with strong understanding of Collections, Multithreading, Event handling and Exception handling.
- Strong experience with MySQL, Oracle 9i/8i, DB2, NoSQL and SQL Server 2000 and Excellent skills in creating and accessing Database using SQL Queries.
- Expertise using version control tools like CVS, SVN, VSS and Rational Clear Case.

- Expertise in using Apache Ant, Maven as java build tools.
- Involved in developing Test plans, Test Cases (Manual/Automated), Test Procedures and white-box and black-box testing.
- Experienced in deploying applications on WebLogic, Apache Tomcat, IBM WebSphere application servers.
- Strong experience with ANT, Log4j and JUnit for unit testing.
- Created Tables, Stored Procedures, User Defined Functions, Views and Triggers for different data operation on the database using SQL Server using Java.

Technical Skills:

Operating Systems: Windows, Macintosh, Unix and Linux

Languages: C, C++, Java v1.8/11, JSP, J2EE, SQL, DHTML, JavaScript, Python

Java/J2EE Technologies: JSP, Servlets, AngularJS, Angular2/4/6, JQuery, Node.JS, EJB, Hibernate, Struts, spring, JDBC, HTML5, DHTML, XML, CSS3, JSON

Web Technologies: HTML5, DHTML, CSS3, XML, JavaScript, AJAX, JSP, AngularJS, BackboneJS, NodeJS, JQuery

XML/WebServices: XML, XSD, SOA, WSDL, SOAP, Apache Axis, DOM, SAX, JAXWS, JAXRS, XML Beans, REST

Frameworks: Struts, Hibernate ORM, Spring MVC, SpringBoot, Spring AOP

RDBMS: Oracle 10g, MSAccess, MySQL, SQL Server, DB2

Web/Application Servers: Apache Tomcat, JBoss, WebSphere, WebLogic

IDE's: Eclipse, NetBeans, Web Storm

Design Patterns: Singleton, session facade, Front Controller, MVC, DAO, MVVM.

Version Controls: GIT, SVN, CVS

Methodologies: Unified Modeling Language (UML), Rational Unified Process (RUP), Agile.

Build Tools: Ant, Maven, Gradle, Docker, Jenkins

Professional Experience:

Walgreens, Waxahachie TX

Feb 2019 - Till

Date

Java FullStack Developer

Responsibilities:

- Responsible for Design, build, test and maintain scalable and stable off the shelf applications or custom-built technology solutions to meet business needs.
- Design and Development of User Interfaces, Menu is using HTML, JSP, JavaScript and XML, Ajax, JQuery.
- Experience in performance tuning a Cassandra cluster to optimize writes and reads
- Mainly involved in development and maintenance of the website using Python, HTML5, CSS, AJAX, J-Query, DOJO, JavaScript, and Angular JS.
- Working on creating a distributed network by hosting the application on AWS cloud, Amazon (ECS, EC2, ECR, Lambda, VPC, and S3) servers.
- Used Kafka messaging system to consume and publish message
- Development and configuration of TIBCO MQ Series Adapter for integrating with IBM MQ Series
- Developed a web 2.0 control console using GWT to manage data matching for data staging
- Built backend REST API with NodeJS, ExpressJS and also Implemented modules into NodeJS to integrate with designs and requirement.
- Implemented Data access objects using JDBC to access data from Oracle database
- Developed Apache Camel endpoints and used producer template to route messages to JMS queues.
- Involved in writing **Java API** for Amazon Lambda to manage some of the **AWS** services.
- Responsible for the build out, day-to-day managing and supporting Cassandra clusters.
- Deployed and hosted the application on AWS using OpsWorks, automated single click deployment onto AWS
- Used spring config server for centralized configuration and Splunk for centralized logging. Used Concourse and Jenkins for Microservices deployment
- Developed the backend tier using Spring Boot framework providing Dependency management.

- Experience in developing LINUX shell scripts for automating deployment of applications
- Hibernate 3.0 was used for Object Relational Mapping (ORM). Hibernate Query language and the Hibernate
- Having good knowledge in **NOSQL** data bases like **Dynamo DB, Cassandra**. Setting up and administering DNS system in **AWS** cloud using **Route53**.
- Involved in Cassandra Cluster environment administration that includes commissioning and decommissioning nodes, cluster capacity planning, performance tuning, cluster Monitoring and Troubleshooting
- Developed single page applications using Angular 4/6, Typescript, HTML5, CSS3, and Bootstrap.
- Implemented JAVA batch to update the customer information to downstream systems.
- Developed SQL, PL/SQL and Stored Procedures on Oracle 10g.
- Worked on WebServices using Java API for XML, JSON Services (JAX_RS) and worked on the build, deploying RESTful WebServices.
- Installed, configured and administered Jenkins CI tool on AWS instances.
- Installed Datastax Cassandra 4.5.1 in Production, Testing environments as per best practices.
- Setup full CI/CD pipelines so that each commit a developer makes will go through standard process of software lifecycle.
- Help individual teams to set up their repositories and help them setting up jobs which can make use of CI/CD environment.
- Virtualize the servers using Docker for the test environments and dev-environments needs, also configuration automation using Docker containers.
- Experience in creating Docker Containers leveraging existing Linux Containers and AMI's in addition to creating Docker Containers from scratch
- Used spring config server for centralized configuration and Splunk for centralized logging. Used Concourse and Jenkins for Micro services deployment
- Responsible for Development of Hibernate objects for data fetching for Java batch and front-end processing
- Involved in writing Java API for Amazon Lambda to manage some of the AWS services.

- Integrate the dynamic pages with AngularJS and JQuery to make the pages dynamic. Created re-usable components using custom directives and filters.
- Developed and designed UI for a dashboard using Angular framework for a database of clients that deal with business connections.
- Implementing Micro services in Spring Native cloud.
- Migrated applications to the AWS cloud
- Worked in the WebServices Environment developing the service methods.
- Developed single page web applications using AngularJS and for client-side scripting and synchronizing java applications
- Involved in building database Model, APIs and Views utilizing Python, in order to build an interactive web based solution.
- Extensively involved designing, developing and implementing SQL Queries and Stored procedures.
- Experienced with AngularJS directives NG-APP, NG-MODEL for initialization of AngularJS application data
- Implemented the Factory, Abstract factory, and MVC and Singleton design patterns.
- Involved in developing, testing and deploying on development and stage environments.
- Implemented AngularJS Expressions, Directives, Controllers, filters and created AngularJS service layer.
- Involved in designing Sequence diagrams and Class diagrams.
- Developed JUnit Test cases and writing test cases in Mockito framework.
- Used Rally tool for tracking stories progress and defect tracking in production.

Environment: JDK 1.7, Core Java, J2EE, JSP, AJAX, RESTful WebServices, JSON, MVC, XML, Apache, Spring Boot, cloud, AngularJS 4/6, Spring, Hibernate, JavaScript, Ansible, HTML, TIBCO, Linux, CSS, JQuery, GUI, EJB, JUnit, SQL, Jenkins, Rally, Eclipse, GIT, Maven, Rally, Oracle

Nordstrom, Seattle, WA

May 2017 - Dec 2018

Java FullStack Developer

Responsibilities:

- Involved in software development life cycle (SDLC), which includes requirement-gathering, design, coding, testing.
- Developed rich Single Page Applications, AngularJS, JQuery, AJAX, HTML/XHTML, JavaScript, CSS, and XML
- Worked with Bootstrap for compiling CSS, JavaScript and building the System with the convenient methods with AngularJS.
- Developing scripts for build, deployment, maintenance and related tasks using Jenkins, Docker, Maven, Python and Bash.
- Created Server instances on **AWS** . **Tomcat**, **Swagger** and **hawtio** are installed and used for deploying Micro-services.
- Performed configuration, deployment and support of cloud services including **Amazon Web Services**.
- Experience on **AWS Deploying**, managing and operating scalable, highly available, and fault tolerant systems and managed continuous delivery systems and methodologies on **AWS**.
- Configure backup, alerts, repairs and monitoring of Cassandra clusters using Opscenter.
- Configured SOAP Web Service in TIBCO, including configured SOAP Server and SOAP Client.
- Used Spring Core Annotations for Dependency Injection (DI) Spring DI and Spring MVC for REST API s and Spring Boot for micro services.
- Used several Ansible modules which include scripting (bash, command), cloud modules
- Configuring IBM IIB with IBM MQ and Integrating IBM IIB with backend FDR using MQ Remote Channels
- Used the Java API to load the data into Cassandra Clusters.
- Integrate the WebServices using Apache Camel routing and spring.
- Configuring high availability using geographical MongoDB replica sets across multiple data centers.
- Implementing MicroServices to communicate with each other across applications.
- Implemented nested views and routing using Angular UI Router as per the requirement. GUI was developed using JSP, HTML, and AngularJS and created

reusable components in Angular2/4 using Custom Directives Filters, Services, and Partial.

- Built an Application and deployed micro services in the AWS Cloud using Docker containers
- Worked in using ReactJS components, Forms, Events, Keys, Router, Animations and Flux concept.
- Wrote AJAX calls to populate tables, tab menu and other components with JSON data in AngularJS.
- Extensively used HTML5, Angular.js, JSON, AJAX and DOM scripting for form validations.
- Used AWS RDS for database configuration.
- Installing, configuring Cassandra on AWS platform.
- Experienced in ReactJS and working with React Flux architecture.
- Developed generic web service architecture using Spring WebServices and Hibernate which could transform responses into SOAP, REST, & JSON allowing for rapid development and clean separation of core business logic and communication protocol.
- Designed REST middleware to connect Android UI with existing back end layer
- Used Netflix OSS to design and monitor micro services in a Spring Cloud environment.
- Used ReactJS in components like JSX, creating React components, Virtual
- Developed user interface using JSP, JQuery and used JavaScript for client-side validations and used AJAX.
- Developed Apache Camel routes and defined JMS endpoints for message processing and routing.
- Used AWS code pipeline for moving the code across different environments
- To perform reporting and template creation for JIRA as directed by IT manager.
- Created REST WebServices to send data in JSON format to different systems using spring.
- Worked on Web Logic 12cfor deployed interface modules
- Deployed the application on a WebLogic server on a UNIX platform.
- Wrote JUnit test cases for unit testing of the developed functionality.
- Developed a logging component using Log4J to log messages and errors.

- Perform all Linux operating system, disk management and patch management configurations, on Linux instances in AWS. Consuming the WebServices and integrating them in the applications.

Environment: JDK 1.7, Core Java, J2EE, JSP, AJAX, Log4j, JQuery, RESTful WebServices, ReactJS, JSON, XML, JAX-WS, Apache CXF, AngularJS 4, Spring, Hibernate, JavaScript, Angular2/4, HTML/XHTML, Bootstrap, EJB, ANT, Python , JUnit, ECLIPSE LUNA, GIT, TIBCO, Tomcat, CSS, Oracle, WebLogic 12c

Farmington Bank, Plainville CT
Java FullStack Developer

Jan 2016 - April 2017

Responsibilities:

- Worked in an Agile Environment and participated in requirement gathering, analysis, and design
- Worked on AWS, High Availability Practices and deploying backup/restore infrastructure.
- Web designing & development using HTML5, CSS3, JavaScript, ReactJS and Ajax
- Implemented Struts 2.x framework in the application. Responsible for configuration and integration of Spring 4, Struts 2.x and Hibernate 4.3.x.
- Developed REST API's using Spring MVC and spring boot, hosted all micro services on Pivotal Cloud Foundry (PCF).
- Build REST WebServices by building Node.js Server in the back-end to handle requests sent from the front-end
- Involved in building database Model, APIs and Views utilizing Python, in order to build an interactive web based solution.
- Developed REST API's using Spring MVC and spring boot, hosted all micro services on Pivotal Cloud Foundry (PCF).
- Designed and developed Controllers, Action Mappings, Interceptors, Forms and View pages for management of policy claims using Struts2.x framework.
- Able to create scripts for systems administration and AWS using languages.
- Used ReactJS in components like JSX, creating React components, Virtual

- Implemented Persistence layer using Hibernate 4.3.x to interact with the MySQL database.
- Used Hibernate for object relational mapping (ORM) and persistence.
- Used SAX and DOM parser for parsing xml documents and XSLT API to handle XML parsing in Object Oriented way.
- Configured AWS Identity Access Management (IAM) Group and users for improved login authentication.
- Implemented different Design patterns like DAO, Singleton, Factory, Delegate, and Front Controller.
- Implemented rest WebServices using REST, JSON and JAX-RS and SOAP WebServices using JAX-WS.
- Development of database interaction code to JDBC API making extensive use of SQL Query Statements and advanced prepared statement.
- Worked in using ReactJS components, Forms, Events, Keys, Router, Animations and Flux concept
- Designed interactive web pages with front end screens using HTML5 and CSS3.
- Implemented JQuery, AJAX calls in JSP web pages to render the response on to UI.
- Created unit tests using JUnit framework in test driven development approach and developed unit and integration test cases using JUnit and Mockito
- MicroServices were being used as a strategy to gradually replace a core monolithic application while still adding business features.
- Implemented client-side Interface using ReactJS.
- Used SVN as version control tool and Maven as build tool.

Environment: Core Java, J2EE, MVC, Ajax, JQuery, JSP, HTML5, JavaScript, SpringBoot, Struts, spring, AJAX, CSS3, Hibernate, XML, SQL, REST, JSON, SOAP, SVN, Mockito, JUnit, JDBC and Maven

Cincinnati Financials, Cincinnati OH May 2014 - Dec 2015
Java Developer

Responsibilities:

- Analyzed the existing application and involved in designing the architecture of new implementation.
- Developed Web Application process for submitting permit using JSF framework. This includes the use of JSP, Java Beans, HTML, EJB, Hibernate and java server faces framework using design pattern.
- Implemented load-balancing with NGINX to allow dozens of Node JS instances to handle thousands of concurrent users.
- Created User Controls and simple animations using Java Script and Python
- Involved in designing Sequence diagrams and Class diagrams.
- Involved in the design of application framework using various design patterns like Session Facade, Service Locator, and Data Access Object and MVC.
- Acting as a mentor for other AWS, Google Cloud programmers in the team.
- Development of web tier using JSF Framework.
- Redesigned and re-implemented services using NGINX, Node JS, Express JS, Mongo DB, and MySQL
- Designed Session EJB's for the Services tier.
- Created standards and patterns for deploying a spring boot data micro-service architecture to PCF
- Used Hibernate for persistence.
- Involved in Design, Development and Support phases of Software Development Life Cycle (SDLC).
- Developed Custom Tags to simplify the JSP code. Designed UI screens using JSP, CSS, XML and HTML. Used JavaScript for client-side validation.
- Implementing server less Big data pipelines using AWS, Google Cloud, AWS, Google Web Toolkit and AWS, Google Cloud Kinesis
- Added dynamic functionality to the application by implementing JQuery, NodeJS.
- Built NodeJS packages/libraries to support current and future Node Development.
- Used Rational Rose for model driven development and UML modeling.
- Created both producer and consumer web service components using REST and implemented RESTful WebServices.
- Actively involved in designing and implementing the application using various design patterns such as Singleton, DAO, Front Controller, Service Locator, Business Delegate, Façade and Data Access Object.

- Used Java Message Service (JMS) for reliable and asynchronous exchange of important information such as loan status report.
- Composed and executed MongoDB document scripts to insert, update NoSQL database, automating data changes, reporting and also wrote MongoDB client to receive data.
- Used MongoDB database to provide recommendations on Performance tuning for applications.
- Extensively used SOAP protocol to exchange data between two applications within the form of XML.
- Designed and implemented WebServices including time critical updating process.
- Developed and tested the application using Eclipse.

Environment: Java, JSP, Java Beans, Hibernate, JSF, MVC, XML, HTML, EJB's, SOAP, WebServices, Oracle, NGINX, Eclipse, Rational Rose

Screatives, India March 2012 – April 2014

Java Developer

Responsibilities:

- Involved in requirement analysis and participated in the design of application using UML&OO Analysis Design and Development.
- Created deployment models for cloud foundry, explaining the underlying VM, Container, and application layout across multiple PCF foundations spread across the globe
- Designed and Developed UI for Portfolio Review Dashboard application using AngularJS, HTML, CSS, Bootstrap, LESS, JavaScript and JQuery
- Implemented client-side Interface using Node JS and used for creating reusable UI components.
- Utilized AngularJS framework to bind HTML template (views) to JavaScript object (models).
- Created Gulp scripts for various tasks and used Node-JS for managing application UI Dependencies.

- Portfolio review dashboard is a single page application meant for Stakeholders and Business users for faster and easier access to critical information for data-driven decision-making.
- Explained to executive-level personnel on how PCF is the key component for a meaningful digital transformation
- Developed views using Bootstrap components, Angular-UI and involved in configuring routing for various modules using angular UI router.
- Implement the JavaScript/JQuery frameworks such as Node JS for MVW/MVC framework
- Developed a Java based ETL tool which extracts data from sources like IBM Cognos (XML) & MySQL and dumps data in the target tables in MySQL database.
- Currently working on Docker container implementation for the Enterprise build system.
- Implemented MVC web frameworks for the web applications using JSP/Servlet/Tag libraries that were designed using JSP.
- Used SQL, PL/SQL and Stored Procedures for Oracle back-end database.
- Involved in configuring the database to Oracle9i.
- Involved in developing a branded portal using the administration tool on web Sphere Application server.
- Used JDBC to configure files to access the database.
- Developed and tested Java Server Pages (JSP).
- Developed reusable AJAX components for web-tier.
- Developed customized JSP tags for project.
- Developed reusable DHTML components for enhanced user interaction.
- Monitored/Improved the performance and behavior of web applications.
- Developed business components for various functionalities.
- Developed JUnit test cases for unit testing.
- Involved in peer-to-peer code reviews. Involved in usability and accessibility design issues of the system.
- Designed and developed Web pages using JSP, HTML, JavaScript, and JSF.
- Created extensive SQL queries to analyze data flows across multiple databases.

Environment: Java, Rational Rose, MVC, SQL, PL/SQL, Oracle9i, JDBC, JSP, Ajax, DHTML, JUnit, SQL, PL/SQL, HTML, JavaScript, JSF
