

Chenguang He

(415)-860-1607

Chenguanghe2697@gmail.com

Summary

- 5 years of experience in the **Java/J2EE** development, involved in complete software development life cycle including requirement gathering, analysis, design, development, deploying and testing.
- Extensive experience in **Java Application Development**, Enterprise java and Objected Oriented Programming (OOPS).
- Experience in development of application of **J2EE – Java, Servlets, JSP, AJAX, Spring Framework, Spring Core, ORM, XML, XSLT, DOM, DAO, JSON, JMS, Struts, Scala and JavaScript**.
- Experience in working using J2EE design pattern like **Abstract, Factory, Singleton, and Front Controller**.
- Strong experience in **MVC (Model View Control)** architecture implemented with **Spring Framework** and **ORM** tools like **Hibernate** to achieve CRUD (create, read, update, delete) operation to manipulate database.
- Exposed to web services using **SOAP, REST, JAX-WS, JAX-RS** and **Apache Axis**.
- Good experience in developing rich and complex Web UI using **AJAX, HTML/CSS, JavaScript, jQuery, Redux** and **Bootstrap** with **ReactJS** framework.
- Experience in JavaScript framework likes **Node.js**
- Good experience in various Database like **Oracle, DB2, NoSQL (MongoDB)** and **SQL (MySQL and PostgreSQL)**.
- Experience in writing complex **SQL** command to execute customized operations.
- Experience in Manipulating data from database based on **Spring Data JPA, Spring JDBC** and **Hibernate** framework.
- Experience in handling collections of data using **Java Stream**.
- Experience in Creating and Managing Spring bean objects using **Spring IOC Container**.
- Experience in designing authentication & authorization system with **Spring Security, Spring AOP** and **Oauth 2**.

- Good Experience in developing Restful Web API constructed by **Spring MVC** and **Jersey**.
- Experience in using API testing tools likes **Postman** to test API.
- Developed Mobile **Android** application by import **React Native** project to Android studio.
- Experience in Django/Python framework.
- Good knowledge of **GIT** version control.
- Good experience with **Apache Maven** or **Ant** for project building and compiling.
- Experience of using **Junit** for unit testing and debugging.
- Experience of using **Log4j** for comment and debugging.
- Experience of deploying Java web project on local container such as **Apache Tomcat**, **JBoss**, **WebLogic**.
- Experience of continuous integrations / continuous delivery by using **Jenkins** for product-like environment deployment.
- Experience of developing project on cloud servers such as **AWS (Amazon Web Server)**, **Heroku** and **Google Kubernetes**.
- Developed Use Case Model, Use Case Diagram, Class Diagram, sequence diagrams using Microsoft Visio and other drawing tools.
- Experience with **java multithreaded programming** to develop multithread modules and applications.
- Strong experience in **UNIX** and **LINUX**.
- Experience in design and development with IDE like **Eclipse** and **IntelliJ**.
- Good communicative and collaborative skills to work with multiple local team members and remote team members.
- Good experience in **Waterfall** methodologies, **Agile** Methodologies, **CI / CD** and **SCRUM** software development process.
- Great enthusiasm to study new technologies.

Education

Bachelor of Computer Engineering from Purdue University, West-Lafayette, IN.

Master of Computer Science from University of Southern California, Los Angeles, CA.

Technical Skills

Programming Language: C, Java 8, Python 3, Python 2.7, SQL, Scala

Technologies: JSP, JDBC, Spring 4.0/3.x, Hibernate, Web Service, SOA, AJAX, Kafka, GraphQL, Redux, Flux

UI: HTML/CSS, JavaScript, jQuery, NodeJS, ReactJS, JSX, Bootstrap

Development Tools (IDE): Eclipse, MS Visual Studio, Android Studio

Web/Application Servers: Tomcat, WebLogic, AWS, Heroku, Kubernetes

Design Pattern: MVC, Front Controller, Façade, Singleton, Factory, Abstract Factory, Prototype

RDBMS: Oracle, MongoDB, MySQL, DB2

Platforms: Windows, UNIX, LINUX

Testing Tools: JUnit

Version Control: GIT

Methodologies: CI/CD, Agile Methodologies, SCRUM

Build Tools: Maven, Jersey, Docker

Experience

First Republic Bank, San Francisco, CA

Sep 2019 – Current

Java Developer

Work on the team of 6 members for development of Online Customer Retail Banking application to serve mid-size and small business companies' financial service.

Responsibilities:

- Gathered requirements from clients and did high level UI design and constructed distributed microservices system to construct the **Java/J2EE** project.
- Created **UML diagram** (sequence diagrams, class diagrams and page flow diagrams) using Microsoft Visio.
- Developed microservices using **Spring Boot** framework.
- Developed web application using core java Threading and Collection.
- Used **Restful** web Services to expose certain functionalities of the application.
- Used **Spring Dependency injection (IOC)** feature for Bean wiring.
- Used Spring integration with **MVC** and **Hibernate**.
- Created Object-Relational mapping using **Hibernate 3.0**.
- Configured and Used **Spring Data-hibernate** to achieve CRUD operation to **MySQL** and **MongoDB** database.
- Used **Oracle** and **PL/SQL** for storing and retrieving customer account information
- Wrote **SQL** command to achieve customized sorting and searching operations on MySQL databases.
- Implemented Spring transaction management for some database transactions.
- Developed authentication & authorization system by using **Spring Security** and **Spring AOP**.
- Used **JMS** for billing system.
- Used **Maven** to compile and generate EAR, WAR, and JAR files.
- Used **Junit** to test each subsystem.
- Used **Log4j** for logging Errors and publishing logging information for debugging purposes.
- Deployed the Spring application on **Apache Tomcat** locally and on **Amazon Web Server (AWS)** online cloud platform for product-like environment tests.
- Updated and refreshed project using **GIT** version control.

Environment: Java 8, J2EE, JSP, Spring Boot, Hibernate, AWS web Server, AGILE, JSON, Oracle, PL/SQL, MongoDB, JDBC, Maven, Git, Jenkins, Junit, LINUX, ReactJS.

Java Developer

Worked on the team of 4 members to develop E-commerce project of online bookstore.

Responsibilities:

- System Analysis and Design methodology as well as Object Oriented Design and Development for the **Java/J2EE** project using OOAD methodology to capture and model business requirements.
- Started Object Oriented Design using **UML**.
- Developed responsive UI using **HTML5/CSS3**, **JavaScript**, **AJAX**, **jQuery** and **Bootstrap**.
- Used **ReactJS JavaScript** library to build interfaces.
- Developed applications using **Spring MVC** framework.
- Used **Spring Security**, **Spring AOP** and **Oauth 2.0** to design logging and registering system.
- Assisted in developing **Android** version of the project implement with **React Native**.
- Created Object-Relational mapping using **Hibernate 3.0**.
- Used **Agile** methodology for software development.
- Used **NoSQL (MongoDB)** and **SQL** database for CRUD operation.
- Configured and Used **Spring Data-hibernate** to manipulate data to **Oracle** database.
- Used **REST API** to achieve web service application.
- Used **Spring Core**, **Spring MVC** and **Spring IOC** to achieve the service architecture.
- Designed authentication & authorization system using **Spring Security** and **Spring AOP**.
- Used **Maven** to compile and generate EAR, WAR, and JAR files.
- Created Custom Exception classes to display appropriate error messages to business users.
- Used **Junit** to perform white box testing of application.
- Used **JSP** for displaying Restful API information.
- Used **Log4j** for logging Errors and publishing logging information for debugging purposes.
- Used **Jenkins** for continuous delivery and continuous deployment.
- Updated and refreshed project using **GIT** version control.

- Deployed the web project on **WebLogic**.

Environment: Java 8, J2EE, JSP, Spring Boot, Hibernate, JavaScript, HTML/CSS, ReactJS, AJAX, AGILE, JSON, SQL, MongoDB, JDBC, Maven, Git, Jenkins, Junit, LINUX, WebLogic App Server, React Native, Android.

Humana, Indianapolis, IN

Jul 2105 to May 2017

Java Developer

Worked on **J2EE** project on a team of 12 members to design and construct Java web application for insurance company to display company's insurance plans, policies and customer service system.

Responsibilities:

- Involved in developing prototypes of the **Java/J2EE** project using **Spring** framework.
- Created **UML** Use Cases, Sequence diagrams, Class diagrams and Page flow diagrams using Microsoft Visio studio.
- Used **MVC** Pattern for the entire website backend design and **Singleton** pattern to execute database operation under multithreading environment.
- Finished **RESTful web service** to achieve transferring http requests and responses between clients and server.
- Developed authentication & authorization system by using **Spring AOP** and **Spring Security**.
- Developed **Ant** scripts for building and deploying **Spring** project.
- Developed Controller Servlets, Action and Form objects for processing of interaction with **Oracle** database and retrieving dynamic data using **Hibernate**.
- Involved **Data Access Object (DAO)** to retrieve data from databases.
- Used **Hibernate Query Language (HQL)** to query the databases for complex data.
- Responsible for coding **SQL** statements for back end communication using **JDBC**.
- Wrote **JavaScript** validations on client side.
- Involved in unit testing and system testing with **Junit** and **Log4J**.
- Updated and refreshed project using **GIT** version control.
- Responsible for packing and deploying components into the **Tomcat**.

- Used **Java IO** to create reports which were mailed to manager every hour.
- Used **Eclipse 3.0** as IDE.

Environment: Java, J2EE, JSP, Java Beans, JavaScript, Ant, Servlets, JDBC, Log4J, Junit, XML, XSLT, HTML, SAX, DOM, Tomcat, LINUX, Oracle.

Socore Energy LLC, IN

March 2014 to June 2015

Java Developer

Internship as assistant in a web application development team of 8 members to design and construct an online power supplying application.

Responsibilities:

- Used **Spring Boot** microservice to construct **Restful web service**.
- Achieved **MySQL** database CRUD operations implemented with **Hibernate ORM**.
- Used **Junit** for project testing.
- Implemented **Log4j** for debugging assistance.
- Used **Postman** for Restful API testing.
- Deployed the java project on **Google Kubernetes**.
- Continuously maintained and updated the web project.

Environment: Java, Maven, Servlets, JDBC, Junit, LINUX, MySQL, Kubernetes.
