

Theron Kousek

314-606-5525

tkousek2002@yahoo.com

<https://tbsoftware.wordpress.com/>

<https://www.linkedin.com/in/theron-kousek-984bab/>

PROFESSIONAL SUMMARY

A lifelong learner with over 30 years of experience in the software industry. Team oriented individual but also am able to adapt to situations where it's best for the company.

Certifications

MSCD Web Applications 2014 – present which includes

- *Programming in HTML5/CSS3/Javascript (70-480) - Aug 2014*
- *Asp.net/MVC applications (70-486) - June 2016*
- *Web Services and Azure Web Services - June 2016*

AWS Certified Solutions Architect – July 2017 – present

AWS Certified Developer – May 2017 - present

Professional development own time

- **Containers, Microservices, Orchestration and Domain Driven Design**

PROFESSIONAL EXPERIENCE

Magellan Health

04/2015 – Present

Web Developer on their Total Member Record application (SPA)

- Working on Virtual Care Solutions platforms for behavioral health clinicians/independent providers. Technology is React/Redux, .NET Core 2.1 in an Agile environment. Working with Okta, SQL Server as well.
- Integrated Salesforce with MFLC (one of Magellan's most important applications) which allows counselors to track/record visits with US military personal world wide to help them address personal/mental stress situations.
- Assisted in design development of the Employee Assistance Program for public facing site for clients/members and providers. Helped promote it to AWS. Technologies included .NET Core 1.1, ASP.NET/MVC 6, MariaDB, SQL Server and Umbraco 7 as our CMS. For AWS, helped implement the Elasticsearch (CMS text search) and Redis functionality as well as assisting in CloudFormation scripts. Authentication implemented with Okta.
- Designed/Developed a rewrite of the Total Member record Admin tool. Technology was Angular2/WebPack, .NET Core 1.1 and MongoDB

- Designed/developed new screens in AngularJS/ASP.NET MVC
- Designed/developed new interfaces using WebAPI fronting database storage in MongoDB
- Mentored other developers in creating Protractor tests for the TMR SPA and additional SPAs
- Designed/developed our new AOD (Application of Disclosure) SPA using ASP.NET MVC/WebAPI and AngularJS
- Working on setting up/configuring and writing queries using Apache Drill to aggregate Member/Provider Authorization/Insurance Claims data from SQL server, DB2 and MongoDB to front several applications corporate-wide.

Training: Passed the test for the MongoDB certificate at MongoDB University for “Programming MongoDB in C#/.NET”

Object Computing/Advantage

10/2013 – 04/2015

Assignment at BioMerieux (Oct 2014 – April 2014)

- Working on web rewrite of a desktop application that assists laboratory technicians with test results for bacterial strains, etc... Technology stack is AngularJS, CSS3 (incl Bootstrap 3), Javascript 6 (incl JQuery), HTML5, using WebStorm IDE.
- Added CSS styling to the application to make it conform to the UI standards as specified by BioMerieux.
- Developed numerous AngularJS directives for code reuse/commonality
- Implemented fixed table scrolling of HTML tables/Lists using CSS fixed layouts/overflow
- Developed numerous unit tests using Karma and e2e testing using Protractor
- Participated in regular code review sessions using the Perforce Swarm tool.

Prior to the assignment, attended OCI/Cait’s internal Angular training which spanned across 3 weeks.

Assignment at Boeing

- Designed/developed phase 1 modules for the long term STREAMS project.
- Mentored/trained 2 individuals in WPF/XAML/C# and .NET 4.5.

Assignment at Maritz

- Made numerous enhancements to customer-based CRM web app that allowed email notifications and reports to be sent to CRMS and their managers based on CRM visits/assignments. Technologies involved ASP.NET WebForms, SQL Server/C#.
- Developed several SSIS packages to automate billing processes for Nissan/GM dealerships.

Dierbergs Marketplace

1/2011 – 10/1/2013

Started as OCI on 1/2011 and hired perm on 8/1/2011.

- Wrote numerous internal UI Web Apps (that replaced legacy asp apps) in ASP.NET/MVC3 and MVC4/Razor. The commercial graphics library was the Kendo Web UI from Telerik. Javascript/JQuery as well.
- Designed/implemented a framework for our ASP.NET MVC apps to "plug into". These consisted of a skeleton web app on which base classes and libraries allowed brand new ASP.NET/MVC apps to utilize scripts/css from our corporate CDN as well as to inherit authentication and reporting capabilities.
- Wrote several C# Visual Web Parts for Sharepoint 2010. These primarily involved launching our Web apps from new windows within Sharepoint.
- Designed/implemented a framework for our ASP.NET MVC reporting submit screens to hook into. We replaced Crystal Reports back in 2011 with SSRS. Some of the submit screens were fairly complex and needed to launch SSRS reports from a browser. Used MVC Portable class libraries from MVContrib to accomplish this.
- A big task involved also writing "an almost faceless" web site by in which would use the SSRS Web Services API to invoke SSRS reports thru byte streams and render the reports back thru the browser via PDF and Excel spreadsheets. Designed a database in SQL to handle all the reporting requests, etc...
 - Wrote a UI application tool in WPF that utilized the TFS Api to create TFS work items, tasks, etc.. Our report person used this everytime she needed to start on a new report as this would generate all the necessary tasks/subtasks within TFS for us (each report would have a screen, stored procedures, ssrs templates, etc..) for all of the tasks/subtasks
- Wrote a UI application tool in WPF that synchronized 2 seperate SSRS report server objects. We had a dev and a prod environment. The tool listed the SSRS objects in DEV and in PROD and allowed you to see the differences between the two as well as to delete objects from one or the other. It also allowed you to deploy the objects from dev over to prod.
- Wrote several WCF services that fronted email and authentication services that our web apps/applications used.
- Designed/implemented a high profile application called Managers Special. This used Silverlight 5 and RadControls from Telerik. This is still in use today and is used heavily on a daily basis by the store managers to push their specials in order to print tags, etc.. Wrote a local WCF service for this application which pushed the actual data from the screen to the back end so that our tag printing service could come along and print out the tags.
- Designed/Implemented a set of interfaces that push pricing data from corporate down to a 3rd party POS application that controls what gets pulled up for items when they are scanned. This was an adaptor written in C# that interfaced to third party applications together (Price/Item management + POS).
- Trained/Mentored a few co-workers in ASP.NET/MVC/Razor, Silverlight/WPF.

Object Computing, Inc. (OCI) – St. Louis, MO
05/2005 – 12/2010

- For an advertising/marketing firm
 1. Designed/developed a dashboard/reporting piece of a leads

management system for a boat manufacturer utilizing

Technologies:

- .NET 4
- Silverlight 4 / Telerik controls
- WCF
- Transact-SQL and SQL Server 2008
- LINQ & Entity Framework
- LINQ to SQL

The process consists of aggregation that runs nightly and the dashboarding/reporting pieces that report off of the several dimensions of aggregated data which reports lead counts and sales rates, etc...

2. Designed and implemented a web-based data gathering pages (invoked within IFrame of unknown sources) to collect lead/customer data for recreational vehicles.

Technologies:

- ASP.NET 2.0 and SQL Server 2008 (Transact SQL)
- ExactTarget (industry leader in email notifications, etc..)
- CSS

3. Enhanced a major application (for product/competitor analysis/comparison) by adding beneficial features including

- a. Blackberry compatibility
- b. Controlling printing from within the browser (watermarks)
- c. Implement user maintenance with ASP.NET Membership and user/roles.

Technologies:

- ASP.NET 2.0 and SQL Server 2005 (Transact SQL)
- CSS
- ASP.NET Membership/user roles

- Designed and developing a system for tracking / scheduling OCI classes/instructors + reporting/email notifications.

Accomplishments:

1. Utilizes Silverlight 3.0 / SilverlightToolkit (codeplex), RIA services for Silverlight + Entity Framework, LINQ custom validation and WCF. Contains email support and interaction with Microsoft Reportviewer within ASP pages.

2. Reporting functionality using ASP.NET and Microsoft's Reportviewer technology for Visual Studio 2008 which allows for reporting and the data to be exported to PDF/Excel.

3. System replaces what once was a full manual based system.

4. System consisting of multiple web-sites, 60+ screens in Silverlight encapsulating 44+ database tables using RIA Services within Silverlight + Microsoft's Entity Framework.

- On 2nd time around with a correctional commissary market, worked on a 5+ month assignment from 9-2005 thru 2-2006 *and* from 01-2007 thru present developing C#/.NET developing brand new additions to their POS system.

Accomplishments:

1. Designed/developed a full scale web site using **Silverlight 2.0**/WCF 3.5 to process order/upload/refunds from facilities to our central accounting system.
2. Designed/developed the framework & interfaces for a Lobby Kiosk system (providing deposits to inmate accounts) utilizing WPF and LINQ.
3. Designed/implemented a functional system using NetSpend prepaid debit cards (ASP.NET) which allows inmates to receive prepaid debit cards. The front end was hosted in **Silverlight 2.0**.
4. Designed/developed integrated Secure Mail system within an ASP.NET 2.0 system which allows inmates/family/friends to email each other thru an external web app as well as an internal one running on a Kiosk.
5. Wrote/implemented numerous applications that interface to hardware devices from card swipers/readers (including one in **Silverlight** to host the card reader on the client end) to MoneyGram's Money Order printers (using Sockets) in C# and C++.
6. Designed/implemented a functional system using a Western Union interface thru Web services that allows inmates to receive funds from any Western Union office. Our software passed a rigorous compliance audit from Western Union who visited the office from Costa Rica to perform the audit.
7. Designed/Architected several in house applications/systems from the ground up.
8. Wrote an in-house receipt number loader tool using **WPF**.
9. Developed several bridges between legacy **MFC/C++** non-managed apps and C# managed apps via Web Services.
10. Developed numerous tools in house for our technicians using ASP.NET web development and Winforms development.
11. Supported and mentored individuals with several MFC/C++ applications.

12. Wrote interface drivers to optical scanners for orders.
 13. Involved in all 3 tiers (client, middleware, db) of development. Client side work consisted mainly of **C# WinForms** development and a little bit of **MFC/C++** gui work. Middleware involved designing/developing **C# Web Services** and transferring **XML-typed datasets (ADO)** via client/middle tier. DB tier work involved writing numerous stored procedures in DB2 8.2 as well as designing/implementing schemas and table definitions.
 14. Finished a major task involving the concept of warehousing/pricing and taxing groups for the POS system. This involved writing numerous heavy-duty DB2 stored procedures implementing bulk inserts and updates (using **SQL Merge statements**) and implementing SQL union/intersection sets. Had to develop detailed implementation plans for seeding data and tests.
- On assignment for 6 months(between my 2 times at Keefe Group back in 2006) in-house in St. Louis developing all client side code for a real time system with a Stock Trading company. Technology was .NET 2.0 and the client development was Winforms and C# sockets.
 - On 2+ month assignment with Boeing (late in 2006) developing Unit tests and JNI wrappers in Java around legacy C++ classes.
 - On a 1 month assignment in-house (in late 2006) to perform research and development utilizing the NetBeans API (ie, proof of concepts to optimize a front end used at Boeing).
 - At a major bank, spent 4 weeks adding application security code to prevent SQL Injection and Cross-site scripting to their web-site. Environment was ASP 3.0/VBScript and SQL Server.
 - Performed on-site evaluation/estimate for converting an existing web-based application (using JSP/Servlets/Sybase) to VB.NET and SQL Server.
 - Worked on-site at with a partner company in Macon, Missouri in a work-shop using C#/.NET. Helped design/plan/implement test-first strategies and Extreme Programming
 - Rewriting an internal web-application to allow OCI's CAIT administration to be more centralized. Using ASP.NET with C# and Mysql on Linux platform with MONO (.NET framework for Linux).
 - Attended 4 CAIT classes held thru OCI (Java Web Services, UML, Object Oriented Design Patterns, Java/XML)

Environment: Test First Development with Nunit. DB2 8.2, ASP.NET, C#/VB.NET, MySql, SQL Server, Visual Studio 2003 and 2005, ASP 3.0/VBScript.

Monsanto - St. Louis, MO (Consultant)

08/2004 – 05/2005

Programmer / Analyst Java, Oracle-development (TCC/Sequencing)

- Responsible for writing a Sequence Editor application for their biologists to use in determining the proper Codon sequencing discovery. The tool was implemented as a trusted Java Swing applet utilizing XML (Sax/Dom) to persist the data. Received an achievement award for finishing this tool 6 months ahead of schedule.

- Enhanced/supported a Web application called EBITS which provided a Web wrapper around GCG Wisconsin package genetic tools. Application was JSP/Servlets running with Apache/Tomcat using Oracle back end + email notifications of reports and tool runs.
- Converted existing legacy Java/Oracle systems running on LSF compute farm over to the Sun Grid Engine compute farm (i.e., multi-process environments). Finished task ahead of schedule which had to be done by 1/1/2005 due to expired licenses that could not be renewed. Received an achievement award for this.
- Wrote the necessary software/scripts to load over 285,000 Soybean sequences into Monsanto's trace repository database. Software included fault-tolerant FTP clients and trace loading applications in Java to populate Oracle. Received another recognition award + gift certificate for this.

Environment: , Test First Development + JUnit. JSP, Servlets. 3-tiered architecture, OOD/OOP, ORACLE PL/SQL & SQL, IntelliJ Java JDK1.4, JFC/Swing, XML (Sax & JDOM), TOAD

Monsanto - St. Louis, MO (Consultant)

08/2003 – 08/2004

Programmer / Analyst Java, Oracle-development (TCC/Rubicon)

Wrote the Java-Swing GUI's for Monsanto's Rubicon application which allows for statistical modeling and selective backcrossing/recombination across multiple generations of corn-seed offspring. Wrote many of the server-side data access via Oracle's PL/SQL and Java JDBC. Most of the data access was in the form of stored procedures using Oracle PL/SQL. Client to middle tier was handled via data-serialization thru XML via JSP. Data was serialized between client/server via XML and Sax/DOM. The nature of the application involved ScoreQC, statistical analysis (using Asreml), models (using proprietary algorithms) and many external processes for loading/extracting marker and individual scores.

Environment: , Test First Development and Extreme Programming. 3-tiered architecture, OOD/OOP, ORACLE PL/SQL & SQL, IntelliJ Java JDK1.4, JFC/Swing, XML (Sax & JDOM), TOAD

Extra: Completed a semester course in Linear/Matrix-Algebra (ie, Calculus-based) at Florissant Valley in order to help understand some of the modeling methods used within the application.

Completed a course at CAIT (Washington University) in Test First Development in Java. Solidified techniques on Test First design/development and Extreme Programming.

TRIPOS – St. Louis, MO

07/2002 – 08/2003

Programmer / Analyst Java-development

Participated in development of all GUI's and Middle Tier delegate interfaces for the Commercial Electronic Lab Journal System to be used by Chemists. The ELJ system allows professional chemists to track/record data about reactions/yields that occur during the development of new products. The system is a 3-tier architecture with the thin client being developed using JFC/Swing.

- Designed/developed phase 1/phase 2 GUI's for ELJ using Java's JFC/Swing (thin client approach) and interface-delegates to communicate to/from the middle tier (which was done using EJB).
- Worked closely with middle-tier (EJB)/database-tier (Oracle) people to finalize/implement the Java interfaces for delegates to the EJB Home Remote and Remote interfaces
- Participated in all of the data modeling/middle-tier and presentation-tier meetings/discussions as well as UML diagramming discussions.
- Wrote numerous widgets in Java for our component library including a drag-and-drop widget and a table widget resizer. Many classes incorporated the use of XML configurations using Sax and JDOM.

- Completed EJB training course {received certificate of completion} at Washington University thru OCI {www.ociweb.com}
- Performed proof of concept tasks within JBoss and stateless Session Beans {EJB}

Environment: 3-tiered architecture, OOD/OOP, ORACLE & SQL, Eclipse, Java JDK1.4, JFC/Swing, XML (Sax & JDOM), TOAD, UML, JBoss, EJB 2.0, WebLogic.

Extra: Completed a college semester course in Engineering Chemistry at Forest Park Community College (received A grade) in order to help get a complete understanding of the domain.

EXPRESSBILL - Phoenix, AZ

01/2000 - 07/2002

Programmer/analyst/web-development

Participated in development of all GUI's ExpressBill's "Express" System. The system is a commercial information system used for the queuing and printing of medical statements.

- Designed/developed phase 2 GUI's (setup and reports in 3-tier) in Java/JSP/Servlets using the Struts 1.1 (J2EE compliant) MVC framework Worked on this for 1.5+ years. Completely rewrote the 2-tier environment into 3-tier.
- Designed/developed phase 1 GUI's (setup and reports in Java, CORBA, JFC/Swing, Servlets/JSP)
- Designed/developed a Java Fax and Email Client (Java Mail API) using Iona's CORBA tools. C++ and Java clients were able to remotely invoke Faxes and emails.
- Designed/created many of the DB tables in Oracle
- Designed/developed a Java source code DAO generator called Genesis using JDBC/Metadata

Environment: J2EE, 3-tiered architecture, OOD/OOP, ORACLE & SQL, UNIX, Jbuilder 6, Java, JSP & JSP Tag libraries, Servlets, JFC/Swing, XML (Sax & DOM), TOAD, CORBA, Iona OrbixWeb

DIRECTEL - Minot, ND

01/1999 - 01/2000

Programmer

Brought on board to develop a Java-based helpdesk system and to enhance the predictive dialer (once belonging to Promark One). Shared time between telecommuting and on-site stays (company-provided apartment in Minot) for weeks at a time all thru the year.

- Developed helpdesk application (Setup and task management/assignment) as Java Applet.
- Assisted in training another co-worker in the Java environment so that he could take over the helpdesk application
- Developed reporting for the helpdesk application using Servlets and C++/Perl.
- Added 3rd party verification to the predictive dialer
- Converted existing dialer source from C++ Views to STL and noted significant performance boost
- Assisted in training a co-worker in the C++/dialer environment so that he would be able to take over the predictive dialer

Environment: Java, J2EE (Servlets), JFC/Swing, Applets, Servlets, Perl, C++, STL, Visual Café 3, Informix, SQL

WAL-MART HOME OFFICE - Bentonville, AR

03/1998 - 01/1999

Programmer

Responsible for the development of information systems for the Call Reporting (SMDR) and call billing EDI systems.

- Developed on-line reporting using Java AWT (Applets) and HTML/Javascript/Perl for the accounting departments to balance on their phone usage. These reports are run monthly and are matched to the incoming EDI data feed.
- Developed SMDR collector (in C++) to collect SMDR data from a Lucent G3 switch. Populated SMDR data into an Informix database.
- Developed EDI extractor to extract AT&T data feed (using EDI 811 format) in C++. Data was extracted and aggregated into the Informix database

Environment: Java, Applets, HTML, Dynamic HTML, JavaScript, Perl, C++, AT&T C++ Components, Informix, SQL, Windows NT, HP UNIX

IMPACT TECHNOLOGIES - St. Louis, MO

09/1996 - 03/1998

Consultant

Participated in the design/development of the Traffic Analyst application. Please see the following URL for a product description http://www.impacttech.com/html/traffic_analyst.asp

- Designed/developed a VCO "Virtual Communication Object" to handle all IPC communication between processes in the Windows 95/98/NT environment. Communication supported includes Winsock 2.0, File transfer via FTP and Modem (using Greenleaf). File System messaging. Developed in Visual C++ utilizing many of the non-GUI MFC classes (sockets, strings, etc..).
- Wrote a file extraction/archiving system using Greenleaf's Archive library. WinZip compatible
- Designed/developed an SMDR data collector for the Siemens 9200 data collector using C++. Data extracted was populated into the database.
- Developed many test driver GUI's using MFC's GUI classes

Environment: Visual C++ 5.0, TCP/IP programming, Modem/Serial programming, Windows, MFC, Sybase Watcomm & SQL

PROMARK ONE - Phoenix, AZ

05/1994 - 09/1996

Programmer/Analyst

Responsible for the design/development of an outbound predictive dialer.

- The predictive dialer outperformed the expensive EIS commercial predictive dialer. Our cost per 160-port system (\$130,000). The cost for EIS' 96 port system (\$650,000). Promark abandoned EIS' dialer and used the one developed instead to generate its revenue. The dialer consisted of 5 daemons written in C++ and used wrapper classes around ESQL/C to extract/populate the Informix database
- Designed/implemented a "finite communicator object" which abstracted IPC communications between these dialer daemons. TCP/IP and Serial port communications were abstracted
- Designed/implemented voice recording for our verifiers. The system was implemented using VOS and Dialogic DT/240SC T1 cards. The C++ dialer interfaced with this to record the conversations between the verifier and the customer.

Environment: C++, C++ Views, Informix, SQL, LNX 2000 (2048 Non-blocking IO ports). TCP/IP programming.

CAP GEMINI AMERICA - Portland, OR

07/1993 - 05/1994

Consultant

Contract at Northwest Natural Gas (Portland) and Contract at King County (Seattle)

- Designed/developed a DOM (Data Object Model)/DAS (Data Access Services) in C/C++ which encapsulated their Sybase database. The interface (in the form of a shared library) was made available to X-windows GUI applications for their purchase order system.
- Programmed batch interfaces using Visual C++ 1.5 for their broker/commission system. The system populated Microsoft SQL tables from batch files downloaded from the mainframe. VB applications were in the presentation layer.

Environment: C++, C, VB, Microsoft SQL, Transact SQL, Xwindows, Windows, DOS

ANHEUSER-BUSCH - St. Louis, MO

02/1989 - 06/1993

Consultant

Responsible for systems programming and the Expense Budgeting system for Anheuser-Busch's WCS (Wholesaler computer systems) application used by all Busch branches and 100+ wholesalers nationwide.

- Designed/implemented real-time trouble ticket reporting using IPC/Shared memory
- Designed/implemented Expense Budgeting setup screens and reporting
- Implemented many enhancements (screen and reporting) to their Accounts Payable, Accounts Receivable, Norand and Item Inventory systems.

Environment: C, IPC, UNIX, Informix, C-Isam

SYSTEMS PLUS - Des Plaines, IL

01/1988 - 02/1989

Programmer

Responsible for customer enhancements to BACS (Business Accounting Control Systems).

- Wrote a COBOL source code generator in C. This would generate the COBOL source code for screens and insert/update routines.
- Made many customer enhancements to BACS

Environment: SCO Xenix, C, Ryan McFarland PC-COBOL

COUNSELING CENTER - Des Plaines, IL

07/1987 - 01/1988

Programmer/Intern

Responsible for Dbase III development to their appointment scheduling system. Also worked here on my senior project.

EDUCATION

B.S. Computer Information Systems, DeVry Institute of Technology, 1988 GPA 3.75/4 Presidential Honor Society.

33 credit hours of college Mathematics & Chemistry at St. Louis College & SIUE GPA 3.91/4 (1990 – 2004)

Additional Training:

- Mastering Web Design – CAIT (2013)
- AngularJS – CAIT 4 week class (2013)

- Programming in iOS/Objective C - CAIT(2013)
- Object Oriented Analysis/Design (Oregon Institute of Technology) 199. 6-week course
- C++ (Oregon Institute of Technology) 1993. 6-week course
- Computer Telephony Training in LNX/2000, Finite State Machines 1994-1995
- HTML – 1 week certificate program at Wal-Mart 1998
- JavaScript - 1 week certificate program at Wal-Mart 1998
- XML – Semester Long class at Scottsdale Community College 2002
- Enterprise Java Beans at OCI/CAIT Washington University October 2002
- Engineering Chemistry Forest Park 2003
- Test First Driven Design in Java at OCI/CAIT Washington University March 2004
- UML at OCI/CAIT Washington University Jun 2005
- XML Java Web Services OCI/CAIT Washington University Jun 2005
- Object Oriented Design Patterns (Gang of Four) OCI/CAIT Washington University Jun 2005
- Java & XML (Sax/Dom/JAXB/etc.) OCI/CAIT Washington University July 2005
- Hibernate (OCI/CAIT)
- Attended the 2005 3-day Java Gateway Symposium in St. Louis
- St. Louis Day of .NET which included 12 hours of training from LinQ to WCF to WPF to Silverlight. Sept 2009
- 4 week Internal event class at OCI in Java Spring. Sept 2009 - Oct 2009
- 1 day event with Windows for Workflow Nov 2009
- 4 week Internal event class with JQuery/Javascript Aug 2010 - Sept 2010.
