Summary

I am skilled in IT industry for more than 10 years. I have 7 years' experience in MS-SQL DBA and Windows Server with vast knowledge in SQL Server 2008 R2, 2008. I have worked retail, manufacturing and high-tech hybrid environments managing more than 5,000 MS SQL instances, 7,000 databases, VLD, AlwaysOn/Traditional clustered, replicated and mirrored (2008, 2012, 2014 and 2016 MS SQL), environment and a record of increased responsibility with zero down time service level agreement with our clients. I am a proactive in prioritizing and completing projects in accordance with time schedule, SLA and budget. I am Database administrator with strong technical expertise, excellent written and communication skills, can work flexible to multitask when necessary, independently and collaborate with teams across different IT structures.

Technical Skills/Core Competences

- Strong experience in Database Administration in SQL Server
- Strong experience in Installations, Migrations and Decom of SQL Servers on Linux, Cloud and On premise
- Experience in Monitoring and optimizing the performance of cloud databases
- Installation, configuration, and upgrade of Microsoft Windows Server 2003, 2008r2, 2012, 2016 and 2019
- Experience in troubleshooting and resolving database integrity issues, performance issues, blocking and deadlocking issues, replication issues, log shipping issues, connectivity issues, security issues etc.
- Configuring and setting up windows Server Failover Clustering environment
- Ability to detect and troubleshoot SQL Server related CPU, memory, I/O, disk space and other resource contention.
- Strong knowledge of backups, restores, recovery models, database shrink operations, DBCC commands, Clustering, Database mirroring, Replication in Azure Cloud and on-premises
- Administering Windows Server 2003, 2008r2, 2012, 2016 and 2019 respectively
- Experience in ticketing tools like BMC Remedy, Service Now, JIRA and HP Service Management
- SQL Development - ability to write and troubleshoot SQL Code and design (stored procs, functions, tables, views, triggers, indexes, constraints)
- Manage the production and development databases including performance tuning, capacity planning, SQL Server clustering, database security configuration, and database continuity on SQL Server 2008 R2, 2012 and SQL Server 2014.
- Tables partitioning, file and file-group management, Knowledge of High Availability of database servers using Database mirroring, replications, and Log Shipping.
- Design and implement 2005, 2008 R2, 2012, 2014 and MS 2016 databases for mission-critical business.
- Use SQL Profiler for troubleshooting, monitoring, and optimization of SQL Server and SQL code.
- Develop and modify stored procedures, queries, triggers, views, indexes, and functions to handle business rules, history data and audit analysis.
- Use Data Transformation Services (DTS)/SQL Server Integration Services (SSIS) and Extract Transform Loading (ETL) tools of SQL Server to populate data from various data sources, creating packages for different data loading operations for application.
- Configure and support SSIS and SSRS for 2005, SQL Server 2008 R2, SQL Server 2012, 2014 and SQL Server 2016
- Troubleshoot databases and custom application issues for 2005, SQL Server 2008 R2, 2012, 2014 and SQL Server 2016
- Experienced in working with end users to define, implement, and maintain their reporting requirements.
- Experienced in the design, coding, testing and implementation of high volume transactional (OLTP) SQL databases instances.
- Generate the weekly, monthly, and quarterly report by using SQL Standard Report.
- Create reports that ran daily for jobs running in SQL Server Agent.
- Experienced with monitoring and troubleshooting in 24x7 operations.
- Proven ability to work with software engineering teams and understand complex development systems, environments and patterns.

Professional Work Experience

ALLERGY SERVICES OF NORTH AMERICA, SQL Server Database Administrator (March 2016 – Present)
110 Eagle Spring Drive, Suite C Stockbridge, GA 30281

- Conducted SQL Server production database analysis on a regular basis.
- Developed and created the new database objects including tables, views, index, stored procedures and functions, advanced queries and updated statistics using Query Analyzer and Enterprise Manager on the existing servers.
- Promoting query tuning through schema refinement
- Provide development and design assistance to development and other application support teams
- Provide technical leadership to development team through project leadership and technical documentation and outage management
- Promote data standards, system procedures and security policies, and best practices, e.g. Dev/UAT/Prod environments and QA & release control
- Facilitate the readiness and availability of all database repositories
- Establishes and builds strong working relations and partnerships with Business Units and senior management
- Participate in technical calls; and contributing to technology solutions
- Subject matter expert of the end-to-end operational design and methodology behind the entire environment, and technical resource for operations, technology and management staff (SME)
- Provides database assistance and problem support to application developers, business analysts and business users
- Maintained directory and knowledge of all factors, issues and events that may affect tasks and project delivery
- Maintained periodic database growth rate and performance statistics to support a proactive database management culture
- Provides technical assistance and mentoring for staff for developing conceptual and logical database design and the physical database
- Help developers improve the performance of query by tweaking it or modifying indexes in TSQL.
- Removing unnecessary columns, eliminating redundant and inconsistent data, normalizing database, establishing necessary joins, creating useful clustered index and non-clustered indexes.
- Rebuilding the indexes on regular intervals and placing the huge table/non-clustered index on the separate file group to improve the performance.
- Provides support in capacity planning, forecasting and evaluation reports
- Managed Security using SQL Logins, Roles and Security Modes for various users including permissions and auditing, penetration and vulnerability tests, and restricting SQL access
- Ability to develop/employ tools that proactively identify database performance issues and bottlenecks
- Analyzed execution plans and generate suggestions for improvement.
- Provide 24/7 SQL Server Database Support and on call rotation

Northpoint Technology Inc. Intermediate MSSQL DBA (August 2012 – February 2016)
112 Eagle Spring Drive, Suite D Stockbridge, GA 30281

- Refine and automate regular processes, track issues, and document changes
- Assist developers with complex query tuning and schema refinement.
- Provide 24x7 supports for critical production systems.
- Perform scheduled maintenance and support release deployment activities after hours.
- Creating and manage Azure SQL resources with the Azure portal
- Provisioning new SQL databases on the cloud
- Backup and restore Azure SQL Databases.
- Ensure all database servers are backed up in a way that meets the business's Recovery Point Objectives (RPO)
- Test backups to ensure we can meet the business' Recovery Time Objectives (RTO)
- Troubleshoot SQL Server service outages as they occur, including after-hours and weekends
- Developing and maintaining scripts, utility jobs and implementing needed software for database maintenance.
- Implementing and managing database clustering, failover and load balance technologies as per client requirement.
- Developing, testing & implementing a robust database backup and recovery strategy with client assistance.
- Requesting refreshes pre or post restore activities (e.g. data loads).
- Conducting root cause and analysis for database incidents and problems.
- Configure SQL Server monitoring utilities to minimize false alarms
- Installing and configuring SSRS reporting Servers and developing reports
- Scale out deployment of reports

- Deploy database change scripts provided by third party vendors
- When performance issues arise, determine the most effective way to increase performance including hardware purchases, server configuration changes, or index/query changes
- Document the company's database environment
- Manage SQL Server databases through multiple product lifecycle environments, from development to mission-critical production systems.
- Managing SSRS reporting Servers and upgrading of reports and reporting services
- Managing SSRS reporting permissions and generating reporting from multiple databases, xml files and flat files
- Configure and maintain database servers and processes, including monitoring of system health and performance, to ensure high levels of performance, availability, and security.
- Apply data modeling techniques to ensure development and implementation support efforts meet integration and performance expectations
- Independently analyze, solve, and correct issues in real time, providing problem resolution end-to-end.
- Share domain and technical expertise, providing technical mentorship and cross-training to other peers and team members.

Society Empowerment Projects, Inc. Junior MSSQL DBA (September 2010 – July 2012)

4022 East Lake Parkway, McDonough, GA 30253

- Created, administered & maintained SQL Server databases (production, development, test and staging environment) for various groups such as developers, QA, DA and users and ensured the availability of the database server in a 24/7 environment.
- Used Red-gates and SQL-Centry for Database/SQL Server performance tuning and query optimization
- Trained MS DBAs and BI Administrators before deployed to customer sites for optimum relationship
- Managed the development, design, and implementation of new applications, as well as changes to existing hardware systems and software packages resulting in high performance for clients
- Provided remote support to SQL Servers on customer sites of various companies to prevent downtime
- Implemented MS SQL Cluster (Active/Passive & Active/Active), Multi Node Cluster up to 8 Node for high availability.
- Writing, debugging, and tuning T-SQL, ETL and stored procedures for developers and customers
- SQL Server database physical model creation and implementation (data type, indexing, table design)
- Developed, deployed and managed SSIS, SSAS, SSRS and published them for end users in SharePoint
- Set up and administered SQL Server Database Security environments using profiles, database privileges and roles.
- Database administration including installation, configuration, upgrades, capacity planning, performance tuning, backup and recovery for high availability
- Ensured regular database performance monitoring and tuning to prevent downtime
- Designed backup and restore strategies and Disaster Recovery solutions to prevent data loss
- Implemented security policy design for current and new applications to prevent data corruption and theft
- Coordinated team meetings with groups for new design/strategies.
- Created database design for new projects support
- Worked with light-speed application for optimizing queries and database performance
- Coordinated change review meetings and facilitated in the management of incidents according to SLAs
- Planned and administered projects, as well as overall programs using PMI Guide and expert judgment
- Collected requirements, performed project scoping, and served as SPOC (Single Point Of Contact) for clients
- Ensured that project and program deliverables and benefits align with clients' objectives and advice for change
- As needed and appropriate but no less than annually, provided written technology policy guidance to managers, supervisors, staff and consumers/participants.
- Managed desktop & printer maintenance contracts based on the ITIL Service Management model in line with the overall customer strategy of reducing Total Cost of Ownership.
- Developed annual technology goals and detailed plans for goal accomplishment. Prepared, maintained and tested technology disaster recovery plans. Managed external technology projects
- Respected confidentiality in discussed consumer/participant, staff, volunteer and organizational matters; also maintained confidentiality of organization, project, fiscal and personnel related information
- Provided technical supervision to technology interns and supervised other staff as directed. Completed technology staff evaluations and updated technology job descriptions
- Managed annual routine preventive maintenance projects of all hardware and software (ex. BI, data warehouse, and ERP)

Education

- NIIT University
Microsoft Database, Database Administrator 2009 - 2010
- First Logic
Oracle Administrator, Database Administrator 2006 - 2007
- Lagos State University
B.Sc. Information and Computer Engineering, Information and Technology 2001 - 2007

Professional Certifications

- Oracle Database 10g Administrator Certified Master – Oracle Certified
- IT Information Library Foundations Certification (ITIL) - ITIL Certified
- Microsoft Certified IT Professional: Database Developer 2008 (MCITP) – Microsoft Certified
- Microsoft Certified Technology Specialist (MCTS) – Microsoft Certified
