

GEETA SHEWALE

(678)886-2064

shewale.geeta@gmail.com

<https://www.linkedin.com/in/geetashewale>

Professional Profile

- **9+ years'** expertise in SAP NetWeaver Process Integration (PI) and Process Orchestration (PO) working as a **Lead PI/PO, EDI** consultant.
- Experienced in 8 Full Life cycle development and Implementation projects, 5 Support and an Upgrade Project with diverse domains such as Finance, Automotive, HealthCare, Telecommunication, and Environmental Services etc.
- Skilled in integrating SAP and non-SAP applications using **SAP PI/PO (7.0, 7.1, 7.3 and 7.4 versions)**, **SAP HANA Cloud Integration** and **NW BPM,BRM using WebServices**, EDIFACT, ANSI X12 **EDI** message transfers.

Areas of Expertise

- Extensive work on **SAP's B2B Add On** to handle EDI messages including EDIFACT and ANSI X12 (e.g. transaction sets **810, 850, 855, 856, 940, 944, 945**)
- Design and development of Inbound and Outbound Interfaces using **Proxies, IDocs, RFCs** and Adapters like **File/FTP(S), HTTP(S), SOAP, JDBC, Mail, SFTP, AS2, EDI Separator**.
- Use of **SAP HANA Cloud Integration (HCI)** with **SuccessFactors Integration** using SFSF adapter, HCI monitoring, HCI's secured communication using certificate based authentication
- Implementation of synchronous/Asynchronous **NW BPM** scenarios in PO using various artifacts such as Start event, Automated Activity, Exclusive choice gateway etc
- SOAP based **Web Services** (synchronous and asynchronous) testing with SOAPUI and **Web Service Navigator**.
- Configuring **iFlows** and ESR objects in **NWDS tool**.
- **Error analysis** using **XPI Inspector** to debug PI messages
- **ALE Configuration** for IDocs in ECC and PI
- Generate **Public/Private key pair in NWA** for signing and encrypting the messages from PI.
- Use of **PGP Encryption, Signing (e.g. SHA1 algorithm) Encrypting (e.g. 3DES)** functionalities.
- XSLT mapping to convert xml message to MS Excel format (.xls)
- Implement Payload Based Message Search in PI.
- Design UDFs and **Value Mappings**.
- **Alert configuration** and Management
- Implement **Availability Time management** as per Interface run requirement and schedule provided by the client.
- System Landscape Directory (**SLD**) **Configurations** including creation of Product, Software Components, Technical Systems, Business Systems, setting **Transport Targets** etc

- **PI Transport Management** using File System as well as **CTS+**.
- Various Monitoring techniques, Testing and Error Handling
- Creation of Technical documents for PI interface including Technical Specification, Unit test plans, Unit test reports etc.
- Strong analytical and logical skills and willing to learn new technical components and concepts
- Excellent communication skills, interpersonal skills

Professional Experience

Meridian Medical, CT, USA

Technical Solution Architect

02/2017 - present

- Reviewed and analyzed Meridian's operational processes and create initial process metrics.
- Provided systematic approach to its API development to expedite and automate the process and improve revenue cycle time.
- Designed a common transformation platform for all input claim files to validate, edit and transform into 5010 EDIs to the healthcare providers such as Blue Cross Blue shields, Cigna etc and processing the response EDI messages from Payers to update the existing databases.
- Designed APIs to connect VertexDr to PrecisionBI for general analysis, reporting and generating medical statements and to connect to PatientConnect portal.

American Water, NJ, USA

SAP PO Lead Consultant

10/2016 - 02/2017

- Participation and contribution to build system architecture and network setup to access SAP PI. Worked closely with the network team to set up https communication between SAP and third party considering existing Web dispatcher and Firewall setup.
- Direct work with the client for requirement gathering, preparing Technical solution and implementation of interfaces between American Water SAP system and MapCall third party application using FILE and SOAP adapters.
- Synchronous scenarios from third party to SAP system using Request and Response structures
- File content conversions to build .CSV files.
- Use of SOAP UI tool and Web Service Navigator for Web Services

Edrington, NY, USA

SAP PI/PO Lead Consultant

09/2015 - 09/2016

- Developed complex maps between Flat File, Standard & Customized IDOC and ANSI X12 of EDI Transaction sets **810, 850, 855, 856, 940, 945, 944** to Integrate with Trading Partners using AS2 Adapter.
- Used B2B integration cockpit to download required EDI XSDs to be used in ESR and also to perform syntax checks for the EDI files.
- EDI Separator Adapter was used to convert ANSI X12 to PI readable format and AS2 adapter was used to connect to Third party system.
- Signing and Encryption functionality of AS2 adapter was used for data transfer

- NWA Key Store to create and maintain Public key certificate and private keys
- Used **HCI's for SAP ERP to Employee Central Employee Replication**. Configured Sender, Receiver Parameters and Sender as SOAP Adapter and Receiver as **SuccessFactors Adapter**
- Setting up **trusted communication** between a client and HCI using **authentication methods**; basic and certificate authentication (using trusted store)
- Created SLD components and set transport targets for each business system present from development to quality system and Quality to Production system.
- Configured Email Alerts for Critical Interfaces
- Developed a scenario to generate delivery Header and Item files separately from each IDoc created in SAP, with same date time stamp. The requirement was achieved by writing an UDF
- Developed an interface generate Excel file (with .xls extension) and sending it to end user as an email attachment. Achieved with XSLT mapping for XML to XLS conversion and Mail adapter for file attachment
- Handled a text file containing Korean characters without distorted text for Korea customers
- Worked on a scenario with multiple EDI orders in a single file (but not with usual scenario where multiple EDI orders are sent in single UNA-UNZ segment. In this case, multiple Orders were sent with each order enclosed in unique UNA-UNZ pair. Achieved using OS command to read from PI as standard adapter failed to read file with new format) to generate individual Order IDocs.
- Reading a text file in a customer specific format to generate multiple orders IDocs ORDERS05 in ECC. The input file contained multiple Orders with different sold-to parties. ECC
- Provided technical design e.g. ECC to PI connectivity options, data conversions, PI to third party system connectivity options.
- Prepared Technical Specification documents
- Provided support to end user during User acceptance testing (UAT).
- Responsible for successful Go Live for all the interfaces and Post go-live hyper-care support

DBS Bank, India
SAP PI/PO Lead Consultant

05/2015 – 09/2015

- Provided security options for data transfer from Banks' system to its customers
- Developed Inbound interface to receive Payments from Bank's customers
- Outbound interface to send payment acknowledgement in the form of encrypted files from DBS bank to its customers
- As per Bank's security requirement used PGP encryption/decryption for file data transfers using Public and private key pairs.
- Use of File Content Conversion in File adapter to match Bank's specific format called IDEAL3.

- Configured ALE logical systems, RFC destinations and partner profile in R/3 for IDoc set up.
- Created Payment IDocs PAYTXT and INVOIC from SAP and generated payment and Invoice text files respectively with encryption to send to
- Developed a scenario where per payment IDoc, separate header and item files were expected to be delivered with the same date-time stamp achieved using a UDF.
- Use of Run OS command feature of receiver FTP communication channel to invoke an encryption file to encrypt the target payment file
- Performed Integration testing and maintaining test scripts
- Support during User acceptance testing (UAT).
- Post go-live hyper-care support.
- Maintained Technical Documentation

NLAM, India

SAP PI/PO Lead Consultant

12/2014 - 04/ 2015

- As an upgrade project coordinator, gathering requirements and prepared detailed work plan per release, identifying the interface list according to countries.
- Re-created integration scenarios with **NW BPM** where **BPM** was used in older version of PI (7.1) for inbound PO interface.
- Sales Order created based on customer's PO information. Customer send PO Information to NLAM's ECC system Sales Order is created in ECC, NW BPM checks the status and proceeds to retrieve additional customer information. If the customer exists, then proceed to combine the PO information with customer information and write to a file. If customer does not exist, then create an error file. File used as archive and customer acknowledgment.
- Various **NW BPM artifacts such as Start event, Automated Activity, Exclusive choice gateway** etc were used for condition evaluation
- Configuring the ICO in Sandbox , DEV and Pre-PROD and transporting to PROD. Followed by testing the interfaces between SAP and the Business Partner
- Analyzing the existing design and gathering the Functional Inputs, i.e., interacting with functional team/Client to Understanding the Scope / design and to implement the current solutions in to new Environment of SAP PI.
- Object development and validating the code before Go live requests assigned.
- Designing the approach to interface local Government body's postal services' Web portal with NLAM's SAP system to generate Invoice.
- Development of SOAP to file and file to IDoc scenario to post data from Ministry's web service portal to Invoice IDoc in R/3 involving complex message mapping.
- First scenario to read encrypted file from Web service portal and saving it on local application server using SOAP to file receiver adapter
- Second scenario to decrypt the file and convert into IDoc
- Decrypting the source file before processing using Public key certificate and unique private key combination
- Support during User acceptance testing (UAT).
- Post go-live hyper-care support.

Dubai Refreshment Company (DRC), India

SAP PI/PO Lead Consultant

03/2014 -11/ 2014

- Provided L1, L2 support including working on High priority tickets with resolution time 3 hours.
- Resolution of tickets raised by client according to SLA's agreed
- Developed integration scenario using **NW BPM and BRM** functionality for payment/invoice interface.
- **BPM** payment process starts via a Web service that receives invoice data. This is validated against SAP system. Several validations take place depending upon invoice type n decision table implemented using **BRM**. If there is any exception during this process, BPM routes the invoice to contract manager.
- Daily End to End Monitoring of Interfaces for Errors.
- Monitoring runtime workbench including message monitoring, Communication channel monitoring.
- Monitor Inbound/Outbound Queues in ECC and PI systems, checking Cache status.
- Involved in SAP ECC and PI system maintenance/refresh activities
- Checking Cache status using SXI_CACHE and cache monitoring on Java stack
- Worked on Change Requests, Problems and Incidents as raised by user
- Development of new interfaces using Proxies at ECC end and JDBC adapters with SAP Business One (B1) system using **select** and **update** queries to B1 database
- Provide daily status update report to the Business for Open Tickets.
- Host a Daily End to End Ticket review Meeting with customer.

Faurecia, India

07/2012 -

02/2014

SAP PI/PO Consultant

- Developed interfaces using Proxies and File, JDBC, SOAP, Mail Adapters
- Configured Technical systems, Business Systems, Software component in SLD
- ALERTS were configured to send Error Messages along with erroneous message payload as an attachment through email
- Used Adapter Specific Message Attributes (**ASMA**) to populate file name at the target side dynamically
- Transporting the PI interfaces using File system from Dev to QA and QA to Prod system.
- Co-ordinate with ABAP team for Job scheduling of few interfaces. e.g. to schedule a program daily once in the evening and sending a consolidated data through Proxy to PI to send a file at target.
- Developed a n interface to receive a BI report through csv file at a scheduled time on the FTP server and processing it in PI to send to BI/BW system to generate a report.
- Maintained system Integration Test Scripts in HPQC for client reference during UAT
- Responsible for Performance Testing, Monitor and Tuning of various interfaces Reviewing the objects for quality checks

3M, India

11/2011 - 06/2012

SAP PI Lead Consultant

- Worked on multiple PI inbound/outbound interfaces, implementing in PI 7.3 single java stack installation
- End-to-End testing of the developed Interfaces
- Preparing Technical Design Documents, Technical design review checklists, Functional Design review checklists, Unit test reports

- Analysing Functional specs and giving suggestions to client side consultants for modifications.
- Constructing (Proof of Concepts) Scenario as new technology is being used so giving validation to clients regarding functionality of the interfaces.
- Maintained the configuration of System Landscape Directory (SLD) for Products and related Software components, Technical systems and Business systems
- Design, Configuration and Unit testing
- Object development and code review post development
- Configured ALE/ IDoc settings, Define the Port, Partner profiles, Logical systems, Message control and RFC destination
- Involved in the estimation of work against deliverable and defining deadlines.
- Performed Object review of peers.
- Used Solution Manager to maintain all the technical project documents
- Analyzing the Functional Inputs. i.e., interacting with functional team to resolve the issues in the given objects
- Involved in Integration Builder (Integration Repository (IR), Integration Directory (ID)), Integration Server and Runtime Workbench (RWB)

Mead West Vaco Corporation, India
SAP PI Lead Consultant,

05/2011 20/2011

- Handled all the PI related issues in terms of supporting the existing interface developments and post go live support.
- Worked on the HP Quality center tool to handle support tickets
- Preparing Technical documents

General Motors, India
04/2011
SAP PI Consultant

01/2011 -

- Handled all the PI developments independently
- Involved in designing the XI landscape for GM replacing their existing middleware technology called SeeBeyond with SAP PI
- Development of new interfaces with Proxies at ECC and File adapters at Target end
- Conducted Knowledge sharing sessions to educate client team about PI as a middleware
- Participated in the team management activities such as preparing presentations for mandatory quality center training for the team
- Interviewed candidates for project requirements for SAP XI

Veolia, India
SAP PI Consultant

07/2010 - 01/2011

- Involved in interface design, development, testing and transport management.
- Analyzing the various issues encountered in testing like Mapping, XML Namespace in MT/ED's, Message mapping and operation mapping Issues related to IDoc Segments etc. And also in ID - Issue related to Document namespace, Header Mapping, Dynamic configuration, EOIO messages failing because of serialization issue etc

- Fixing and updating the same accordingly in the respective Environment.
- Conducted Knowledge transfer sessions on a monthly basis to help

ThyssenKrupp AG, India
SAP PI/XI Consultant,

01/2010 - 07/2010

- Handled all the offshore PI developments independently including high priority support tickets
- Involved in working with different types of IDOC's in R/3 for Materials & Orders and Invoice (ORDERS, ORDERSP, DESADV and INVOICE) for inbound/outbound to PI
- Configuring R3 settings, which include setting up RFC destinations, Ports and Partner Profiles
- Debugging of SAP-Programs and performance issues
- Involved in designing the Technical Documents, Interface strategy, development, testing and transport management
- Conducted Knowledge transfer sessions and presentation through teleconferencing for US developers

Lucchini RS Group, Italy
SAP PI Consultant,

03/2009 - 01/2010

- Worked from client location- Lucchini's production plant at Piombino, Italy
- Coordinated with the offshore project team and the customer in terms of requirement gathering, issue resolution, development and primary testing
- Development of various inbound and outbound web service Interfaces with Legacy systems using **SOAP Adapters**.
- Outbound Interfaces with proxy to file using **FILE Adapters** with **File Content Conversion**, Proxy to web service scenarios using **WSDL**
- Inbound interfaces with File to proxy, web service to proxy scenarios.
- Development of smart forms, ALV reports and an Enhancement from the ABAP side
- Preparation of Technical Specification and documentation of objects developed in PI, ABAP
- Immediate fixes and issue resolution in quality, pre-production environments.
- Preparation of all the activities for successful go-live of the production plant of Lucchini
- Performed System Integration Testing and Supported UAT
- Responsible for Successful go live of all interfaces and post go live support.

Vodafone Group, India
03/2009
SAP PI Consultant,

06/2008 -

- Involved in all the phases of project life cycle including development, system Integration testing, go-live and the post go-live support
- Worked on IDOCs and its configurations, IDoc extensions and Customizations, ALV reports, BDCs, Enhancements, User Exits.

- Worked with master data interface such as Customer master, Item Master and Vendor master.
- Worked on all Finance Interfaces of Vodafone's Prepaid and Postpaid payment collections using XI and ABAP developments
- Involved in the end-to-end testing for the same
- Performed Unit testing, Integration testing and Supported UAT and Post-go live

Newell Rubbermaid, India
SAP ABAP developer,

10/2007 - 06/2008

- Develop various ALV reports - Grid display, List Display, smart forms- Interactive forms, sap scripts and BAPIs.
- Handling System and user based Exceptions.
- Worked on Data Dictionary Objects (Tables, Structures, views, Data Elements & Domains)
- Worked on classical and interactive report
- Working Experience with Data Migration using BDC for various transactions by using Call Transaction and Session method
- Preparation of Technical specification and Unit Test Reports

Education

Bachelor of Technology (B.Tech) in Computer Science, June 2007 , India
