SUMMARY

- **Installing, configuring** and using ecosystem components like Hadoop **Apache Ranger, Hbase, HDFS, Hive, Kafka, Map Reduce, Oozie, Pig, Sqoop, YARN** and **ZooKeeper**.
- **Deploying Hadoop** cluster on Public and Private Cloud Environments in **AWS** and **Ambari HotonWorks**.
- **Enabling High Availability** to HDFS, YARN, HIVE, OOZIE services to improve the redundancy from failures.
- Good understanding/knowledge of Hadoop **architecture** such as **HDFS, Job Tracker, Task Tracker, Name Node, Data Node , Yarn and Map Reduce, Apache Ranger, Kafka**.
- Writing **PIG** scripts and **Hive** Queries for **processing** and **analyzing** large volumes of **data**.
- **Running Oozie jobs** using workflows and Controllers for job automation.
- **Creating a group of cluster nodes** and **assigning** each groups to each set of **configuration** files.
- Good **knowledge** on authorizing, authenticating, auditing, encrypting and administrating the users data using **Apache Ranger, Apache Knox on Kerberos cluster**.

TECHNICAL SKILLS

- **Hadoop Ecosystem Tool's** : Hbase, HDFS, Hive, Kafka, MapReduce, Oozie, Pig, Spark-SQL, Sqoop, Zookeeper.
- **Cluster Management Tool's** : Cloudera Manager, HotonWorks Ambari.
- **Security** : Apache Ranger, Kerberos, Knox.
- **Devops** : Git, Jenkins, Nagios, Selenium.
- **Operating System** : Centos, Ubuntu, Unix/Linux.
- **Database** : MySQL.
- **Cloud Platform** : AWS.

EDUCATION

Masters in Computer Science | University of Alabama, Huntsville | May 2017 | GPA : 3.45

Bachelors in Information Science | CMR Institute of Technology | June 2015 | Percentage : 68.5%

EXPERIENCE

Hadoop Administrator | Orgspire Inc | May 2018 – Present

- **Installing Hadoop eco systems** and **Upgrading** them to the latest versions.
- **Running and scheduling MapReduce, hive, pig, cron** jobs using **oozie**.
- **Backing up** the Hadoop files using **snapshots, distcp** and **replication** to prevent from system failures.
- **Continuous Monitoring** and **managing** the **Hadoop clusters, health status** of the files and folders and **fixing the issues** through Ambari.
- **Adding** new worker **node** to avoid additional inconvenience and **removing** the failed worker **nodes** from cluster.
- Installing **Apache Ranger** via Ambari and setting up **Ranger plugins** for Hadoop components: **HDFS, Hive, Hbase, YARN, Knox**.
- Creating **instances** and deploying the clusters on **AWS** and **Standalone** and **Fully Distributed mode**.
- Performing **minor** and **major upgrades, commissioning** and **decommissioning** of **nodes** on Hadoop cluster.
- Balancing the clusters to **improve the performance, reduce the data loss** due to hardware failures, random availability of data servers and **addition** of new worker **nodes**.
- Configuring queue administrators **ACL's** and default queue mappings with or without override enabled.

Graduate Student Specialist | University of Alabama, Huntsville | Jan 2017 – Apr 2018

- **Developing** an action **plan** to **solve** the **problem** and **exploit** open **improvement opportunities**.
- **Identifying requirements**, analyzing & designing solutions to problems.
- Pre-processing data on roadmaps using us RAP before sending the data for further analysis.

- Checking the **quality** of the **roads** and **improving** the **measures**.
- Establishing **safety decisions** in management of road networks based on the rational **assessment** of risk.

Hadoop Administrator | Aditya Birla Ultra Tech Pvt Ltd | Jan 2014 - Jun 2015

- Upgrading Hardware configurations by **adding CPU, memory, storage and network resources**.
- Controlling container, applications and user limits and reservations using **YARN Queue Manager**.
- Planning on **data topology, rack topology and resources availability** for users to share requirements for migrating users to production
- **Running** different **jobs** on a daily basis to test the issues and improve the performance.
- **Monitoring, managing** & reviewing Hadoop **log files** and conducting **performance tuning**, capacity management and root cause analysis on failed components & implement corrective measures.
- Setting up the racks to improve the HDFS availability and increase the cluster performance.
- **Limiting** the **creating**, adding of **HDFS file**, folders by setting up the **HDFS Quotas**.
- Assigning **StoragePolicies** and created a **storage pools and directives** to the users.
- Setting up multiple **NFS Gateway** to **mount clients** to the **HDFS** to browse, download, upload files to increase the scalability.

PROJECTS

Analysis of Climate data of USA using Hadoop

- **Extracting** the **data** using **Sqoop** and **loading** files into **hive** table.
- **Retrieving** the **data** from front end application is to **ensure** that the **time complexity** of **retrieving** the data is **higher** than most of the other **database** applications.
- **Visualizing** the **data** using **Tableau**.

Aqua Zoo Management System.

- Using **Sqark-SQL ETL** the data to **analyze** daily **customers**.
- **Maintaining** the **confidential information** of the **sponsors** in **limiting** the **users** authorization information.

Cloud Based Secure Log File Management

- **Uploading** the **data** from **Local File System** to **Cloud** and providing **security**.
- **Implemented solution** using components like **Logging Generator, Logging Client, Logging Cloud & Logging Monitor**.
- **Restricting** the **users** using **Apache Ranger**.
