Business System Analyst /Technical Scrum Master/Java Developer

Summary

A committed & diligent individual with **8+ years of experience** working on several **large-scale Big data & Data warehousing projects**. Worked in a variety of roles including **Business System Analyst, Data Analyst** and also a **Certified Scrum master**. Experience developing, managing and coordinating software projects covering all phases of development lifecycle including **business requirements analysis, software design, development, testing, and maintenance** in multiple domains including **Finance, Banking, Wealth management, Content management & Ecommerce**. Excellent business exposure with **Portfolio Management, Anti-Money Laundering** for Banking applications and **Application management** for **telecom-based E-commerce** applications.

Professional Summary

- Over 8 years of work experience in **Business System Analysis, Data Analysis, Software Design, Development, Implementation and Quality Assurance** of business applications with in-depth knowledge of the Software Development Life Cycle and Quality Assurance Life Cycle.
- Excellent understanding of SDLC methodologies such as **Waterfall, Agile/Scrum and Hybrid Model**.
- Well Experienced in creating **Work Breakdown Structure** and creating/reviewing **Budget Plans**.
- Proficient in **Eliciting Requirements** using techniques such as **Document Analysis, Stakeholder Interviews, Brainstorming, Joint Requirements Planning Sessions (JRP), Joint Application Development Sessions (JAD)**.
- Conducted **GAP analysis** by analyzing the existing system, recommended strategies to improve current processes.
- Proven success performing **Risk Analysis, Impact Analysis** and **Interface Analysis** on multiple projects.
- Involved in the process of **developing** a change strategy & implementation apart from managing the change team's communications deliverables.
- Managed the process of **Change impact analysis** & analyzing the change impact for multiple LOB's.
- Knowledge of **AEM Communities**, creating events, linking to Social media sites, blogs, configuring plug-ins and understanding Adobe Analytics intended for use in **Content management systems**.
- Expertise in **Business Process Modeling Notations (BPMN)** and **UML Diagrams (Use Case Diagrams, Activity Diagrams, Sequence Diagrams, Entity Relationship Diagrams, Component Diagrams)** using MS Visio.
- Good Experience creating **Static Prototypes, Dynamic Wireframes, Mockup screens** using Visio, Balsamiq and Lucid Charts.
- Analyzing Business requirements and preparing **functional requirements document (FRD), business requirement Document (BRD), project initiation document** and **systems requirement specifications (SRS)**.
- Expertise in automating iterating tasks, implementing **process improvements** and **accelerating deliverables**.
- Experience working in different databases like **Oracle, DB2, SQL server**, proficient in **data warehousing, data mapping, data modelling, Extraction, transformation and loading (ETL)** and data visualization and reporting tools like **tableau and SQL Server Reporting Services**.
- Extensive experience performing Data Mapping and creating **Data Requirement Documents** for several projects.
- Good experience with **Business Intelligence tools** including **SAS Enterprise Miner, Microsoft Power Business Intelligence**.
- Good experience working as a **Business System analyst** and performing **Data preprocessing, Data Standardization, Data cleansing, creating forecasting reports, extracting data insights**.
- Experience with **Data Analytics, Data Reporting, Ad-hoc Reporting, Graphs, Scales, PivotTables** and **OLAP reporting**
- Proficient in SOA implementation, with a good knowledge of **API's, webservices, web methods, XML, WSDL, SOA, XML**.
- Hands on experience identifying and documenting with **Client side, Server side and Database Validations**.
- Involved in various Testing Methods such as **Black box testing, Functional Testing, Regression testing, Performance Testing, ad hoc Smoke testing, Integration testing** as well as **User Acceptance Testing (UAT)**.
- Hands on experience **Tracking, prioritizing** defects using HP ALM based on criticality and severity and tracking the progress of testing by creating and maintaining **Requirement Tracibility Matrix and Defect Matrix**.

- Experienced in creating **Test Plan**, **Test Cases** and **Test Scripts** for Functional, Non-Functional testing.
- Good understanding of the various development languages and platforms like **Python**, **R** and how they relate to development of **Service Oriented Architecture** in the form of **API's**, **Web Services** and **Web Methods**.
- Extensive experience on DevOps essential skills like **continuous integration**, **continuous deployment**, **continuous delivery**, supporting Build Pipelines **Release management**, **configuration management**.
- Good knowledge in alternative investments including Commodities.
- Strong knowledge about **portfolio management**, futures, options, forwards and other OTC products and trained developers for various financial products and help them understand the logic of operation of **Derivatives Analysis**, **Credit Derivatives** and **Fixed Income Securities**.

Technical Skills

Methodologies & Frameworks	Waterfall, Agile, Hybrid, Kanban, SAFE, ATDD, TDD, XP
Operating Systems	Windows, Unix
Languages	SQL, PL/SQL, Python, R, Scala, JAVA
Web Technologies	XML, HTML & CSS, SOAP, REST, Web Services, PHP
Databases	SQL server, ORACLE, MS Access, IBM DB2, NoSQL – Mongo DB & Cassandra
Design Tools	MS Visio, OmniGraffle, Balsamiq, Sketch, InVision
Business Intelligence Tools	Power BI, Tableau, Cognos, Curam BI Tool, Curam Outcome management
AWS Tools	EC2, Autoscaling, Lambda, Beanstalk, S3, Glacier, EBS, Cloudfront, Snowball, RDS, DynamoDB, Redshift, AuroraDB, VPC, ELB, Route 53, IAM, Directory Service, Cloudwatch, Key Management, EMR, Machine learning, Kinesis, Quicksight
Data Warehousing	Data Marts, OLTP, OLAP, Query/Reporting, Multidimensional Analysis, Data Modelling
Big Data & Cloud Tools	Hadoop, Spark, Pig, Hive, Kafka, Flume, Databricks
Machine Learning	Tensorflow, Scikitlearn, Regression & Classification
Reporting Tools	Business Objects, Matplotlib
Documentation Tools	MS Office Suite, SharePoint 2010/2013
Project Management Tools	JIRA, RALLY, Slack, Confluence, MS Project
Testing Tools	HP ALM, Swagger, SoapUI, Selenium, Postman
ETL Tools	Informatica Powercenter 9.0+, IBM Data Studio

Professional Experience

Client: - COMCAST, West Chester, PA.

April 2019 – Present 2019

Project: Application Development Agent of the Future (AOTF)

Role: Technical Analyst (Gateway Services)

One of the Project's objective was to build a Business Insights product which would be able to generate insights based on cash flow into/from the business entity, share purchase insights including trends on purchased stocks & bonds, competitive analysis of the MBE/MBS based options that the client had access to. Multiple other projects were inclusive of during my tenure some of which being onboarding a new kind of account called **MSA** for Commercial clients, providing a new **commercial loan portal** for any kind of loan based accounts such as ABL, WLL, LAP etc., Setting up the **PDD platform** for all products that were regulatory and compliance bound, Monitoring the **FPS platform** to allow enrollment & unenrollment into the service, etc.,

Responsibilities:

- Responsible for **Peer reviews of developers**, handle application reviews, encapsulate business and development logic and also develop and lead scrum teams.
- Perform Day-to-day objectives and promoted best practices for developers and avoid developmental build failures/merge conflicts, making sure multi-environment test management is occurring effortlessly across **Consolidated and Digital releases**, and also making sure that the QA team is ready with the environments post integration/Regression testing fueled by contiguous Test Cases which may be either automation/smoke.
- Perform consistent analysis of **orchestrated web services (SOAP & REST)** and **root cause analysis** for production issues which happen site-wide and across channels.
- Support **Digital Production Incident Management** teams in identifying Profile issues and **fastracking tactical and strategic** solutions in adherence with the SLA standards for the same.
- Analyze **Existing Products/Services** by looking into the code directly and Perform early gap analysis before requirement elicitation sessions begin every quarter to be able to contribute to both the global and product backlog.
- Provide **High Level Estimates** before the quarterly project intake cycle so that appropriate budget could be allocated for resources which would be inclusive of Analysis, Development and Testing hours.
- Maintain **confluence** documentation across releases for **API changes** inclusive of Handler/Controller/Implementation change and provide **design and technical input** for contiguous future projects.
- Remain the **specific point of contact** for Project managers when it comes to setting pre-emptive deadlines and deliver the **MVP** for the quarter and provide guidance to Product managers by maintaining a healthy sprint/product backlog free of **technical debt**.
- Monitor log and report **service performance indicators/Registered Splunk Indexes** and provide the most recent daily deployment updates using Jenkins build.
- Assist Scrum master in maintaining **confluence** pages and contribute to sprint/Quarter velocity metrics in terms of business vs technical milestones achieved.
- Led multiple **API de-commissioning initiatives** inside chase as it was transitioning from a **Monolithic** architecture to a **Microservices** based arch facilitated by the GAIA platform.
- Provided inputs to **Design architects** during API and DB design sessions which included simply deciding the rows/columns for a new table to deciding namespaces/keyspaces for the intended Cassandra table and eliminating key constraints.
- Worked in Close co-ordination with the **Gateway Services Platform team** to maintain application level properties configured and made sure their corresponding endpoints were functional and active with firewall connectivity tests.
- Facilitated **DevOps ticket management** and validating aforesaid node level and server level properties apart from validating network traffic on applications post deployment.
- Managed **Triage Calls** to analyze the status of defects and helped prioritize them along with making sure the **SOR** for each defect was identified and played a key role in performing **Pattern analysis** for faster defect resolution.
- Facilitated **UAT** (User Acceptance Testing) and worked with the UAT team to identify planned enhancements and capturing missed requirements as stories and adding them to the global backlog.

Environment: UML, Visio, Invision, Oracle SQL Server, Tomcat Servers, IBM Data Studio, Unix shell, Hybrid, Selenium, SoapUI, Web Services, MS-Office, AWS, JISI, JISI2, BJ2, JDK 8, Jira, Jenkins, Tableau, Putty, Splunk, POSTMAN, Swagger, ADFS based authentication, Oauth and 3 legged Auth.

Project: Credit Fraud Prediction Model**Role: Business System Analyst**

The project's objective was to cut down revenue losses incurred due to fraudulent transactions for the Chase AML, portfolio management and Loan Assessment divisions. The project's scope was to build a credit fraud prediction model which could predict with a certain degree of accuracy about the entity's viability to commit fraud. The resulting model was used as a precursor to corresponding applications within the invested departments.

Responsibilities:

- Conducted **Gap analysis** to assess the strengths and weaknesses of the proposed project (To-be state) as compared to the AS-IS state documented in terms of various components.
- Created Power interest grids to identify key stakeholders for eliciting high level requirements.
- Facilitated **Focus Group** meetings, **Stakeholder Interviews**, and **JAD Sessions** with business users, developers, architects and database development team in order to elicit the base level requirements.
- Created business process workflow diagrams using **Business Process Modeling Notation (BPMN)**.
- Designed and developed **UML Diagrams** including **use cases**, **activity diagrams**, and **sequence diagrams** using **VISIO**.
- Created **Dynamic Wireframes** using Fluid UI for better understanding of the GUI and flow of the application.
- Responsible for creating the **Functional Requirement Document** and the **Business Requirement Document**.
- Created various ad-hoc reports post **Curam BI tool analysis** and **Tableau** customizable dashboards as needed.
- Involved in identifying and implementation of **API Creation**, **SOAP**, **XML based webservices** and **web methods**.
- Acted as the point of contact for clarifying business and functional requirements to the development team.
- Performed **Data Mapping** to identify and standardize the data from various distributed systems.
- Extracted Data from the local DWH and migrated to AWS Redshift which was used as a Data source for the data manipulation on the Databricks platform.
- Created **storyboards** in Tableau using the data available based on the needs and the requirements.
- Facilitated meetings with the development team to help them better understand use cases and to help them come up with **code flow** for these **research items**.
- Responsible for continuously monitoring the development of the project with **JIRA** and reporting any impediments and unexpected delays to the business.
- Utilized innovative techniques like **Ideaboardz** to perform Silent Writing during the Sprint Retrospective Meetings.
- Involved in providing several feasible solutions in Spike Sessions as a Scrum Master to clear Impediments.
- Acted as the Interface for all the defects in the testing phase, logging and tracking them using **RALLY**.
- Effectively translated the functional specifications in to **test scenarios** and **test cases**.
- Facilitated **Regression testing** for all the functionalities and also performed Adhoc **Smoke Testing**.
- Conducted **Triage Calls** to analyze the status of defects and helped prioritize them.
- Facilitated **UAT** (User Acceptance Testing) and created **UAT Documents**.
- Utilized the **Curam Outcome Management** tool to validate Business use cases(healthcare benefits) were synchronous with the income model dataset measured against their **Fraud viability indexes against the Curam Verification engine**.

Environment: BPMN, Balsamiq, Oracle, SQL Server, Excel, Windows 7.0, Hybrid, Selenium, SoapUI, Web Services, MS-Office, AWS, EC2, Databricks, Machine learning framework, CURAM Income Support, Altova XML spy, RALLY, Jenkins, Cucumber, Tableau, Curam Outcome Management, Curam BI & Analytics suite, Curam Verification engine.

Client: TRAVELERS, Hartford, CT.

Jan. 2017– Jan. 2018

Project: Portfolio Supervision System

Role: Technical Scrum Master/Analyst

The Travelers Companies is a US provider of financial services technology. The company's clients include banks, thrifts, credit unions, securities broker dealers, leasing and finance companies, and retailers. This project was developed to implement a **portfolio supervision monitoring system** that will enhance decision making and provide Identity federation and one-stop access apart from the very obvious security standards. The system will notify and advise financial advisor on rebalancing strategies if investor's portfolio deviates by suggesting different financial product to balance the investor's portfolio.

Roles & Responsibilities:

- Worked with decision makers, system owners, business users and SME's to have clear understanding of the high level requirements and goals.
- Implemented **Scrum methodology** during the project life cycle and ascertained deliverables on a per sprint basis.
- Instructed and modeled core Scrum principles of collaboration, prioritization, team accountability and visibility; ensured consistent application of scrum methodologies across the enterprise.
- Responsible for the **daily stand-ups and scrum ceremonies** like Grooming, Planning, Review (demo) and Retrospective meetings.
- Helped to prioritize user stories using **MoSCoW and Planning Poker techniques**.
- Used Scrum Related tools such as **JIRA Green hopper** to document and visualize stories, tasks and measure performance through burn down charts/velocity charts.
- Maintained meeting notes and presented weekly status reports on the project using Business Object Crystal Report.
- Worked on **AEM 6.1** intended for developing custom components and dialogs.
- Used **Mockup Screens** to convey look and feel of the GUI screens for the end users to developers.
- Assisted system architect in writing **Client-side validations & Server-side validations** for the UI webpages and also assisted UI developers in creating Ajax for dynamic and interactive UI pages.
- Supported the **Product Owner** and Portfolio Manager in updating weekly critical path analysis charts.
- Created **Stub Data** in XML and provided to UI developers to progress to web page development.
- Referred to UDDI to access external web services in **WSDL** and also assisted in SLA agreement.
- Facilitated the process of **orchestration** by providing process flow diagram in order to automate the business process.
- Prepared **Test Plans, Test Cases, and Test Scripts for UAT** process with business users.
- Performed data analysis and cleansing guided by the business rules and source data.
- Resolved minor **Impediments** during **Daily Stand Up Meetings**.
- Coordinated with the Product Owner on a regular basis to perform **Backlog Grooming**.
- Facilitated regular **Sprint Review** sessions to appraise the clients of the progress on various components.

Environment: Scrum, Windows 7/Vista/8, MS Office Suite, Java, Java Scripts, XML, SOAP, MS Project, OmniGraffle, UML, AEM, SharePoint, MS SQL Server, Tableau, Swagger, Jenkins, JIRA.

Client: MFS INVESTMENT SERVICES, Boston, MA.

Sept. 2015 – Dec. 2016

Project: Dynamiq Communicate

Business Systems Analyst

Charter Communications, (Spectrum) Inc. is an American telecommunications company that offers its services to consumers and businesses under the branding of Spectrum. Dynamiq Communicate is one of their advanced solutions for variegated platforms and clients across the globe. For staying abreast with current market contention standards, we wish to upgrade our product by value-added services like IBM Watson, IBM Work Force Optimization and BroadSoft's Campaign manager

Roles & Responsibilities:

- Integrating New Features from IBM and BroadSoft into existing Cloud Call Center Application.
- Experience in portfolio of applications that support major technology programs and the built out of contemporary applications. These applications are focused on **Multi channel Communication** and **Skill based Routing**.
- Facilitated the establishment and implementation of standards and guidelines that guide the **design of technology solutions** including **integration of multiple platforms**, operating systems and applications across the enterprise.
- Understand client's existing systems and **workflows**.
- Created a Change Management Integrated Project Plan & Advised on changes to the business continuity and disaster recovery plans.
- Coordinated with vendors to analyze solutions, **system integration** and implementation strategies.
- Gained contact center subject resource experience as it relates to **skill-based routing**, **computer telephone integration**, **agent monitoring**, **call recording**, **work force management**, **reporting** and integration with other applications such as CRM solutions.
- Submit written reports, including **project status and time reporting**.
- Call center subject matter resource for technical building and attended meetings as required.
- Worked independently as a consultant-business analyst in recommendations for call center business architecture including upgrading, testing, and implementation support.
- Tracked **industry trends** and maintains **knowledge of modern technologies** to better serve the enterprise's architecture needs.
- Experience with implementing **AJAX in UI/UX for asynchronous calls**.
- Proactively evaluated systems, made recommendations for improvement and resolved any known issues while **avoiding user impact** when migrating the existing customers.
- Identifying, recommending and supporting the implementation of various programs for the improvement of call center.
- Experience in migrating data from source to **AWS Redshift** & data migration from S3 to redshift.
- Experience with implementing transformation logics & Data masking for cluster nodes in AWS Redshift.
- Identify and address call center technical **infrastructure specific gaps**.
- Worked on API's and accessed third party **Microservices**.
- **Authentication & authorization** provided in accordance with the AWS IAM and SSO features.
- As a part of migration, I was also responsible for testing the new features and changes in the product by assisting the QA team.
- Assisted Proposal Managers in writing **Request for Proposals**.
- Utilized **JIRA** tool for tracking the issues.

Environment: JIRA, Bugzilla, AWS Redshift, AWS IAM & SSO, Confluence, Unified Communication, Jenkins, Selenium, Swagger hub, MS Project, PHP, AngularJs.

Client: SNAPDEAL, New Delhi, India.

Feb. 2014 – Jun. 2015

Project: Employee Insurance

Business Systems Analyst

The purpose of the program was to create a single, integrated system that will execute the calculation of sales compensation, for both external producers, based on consistent and reliable information captured from pre-determined data sources, improving business processes and controls, ensuring compliance and flexible reporting capabilities.

Roles & Responsibilities:

- Served as primary liaison between client and development team.
- Created targeted questionnaires for SME, to gather requirements and understand the business process goal.
- Created business requirements and helped system analysts in converting them into SRS document.

- Actively participated in Pre-Testing that included review of the requirement documents.
- Used Rational Requisite Pro to document stakeholders' requests, software requirements specifications.
- Designed, documented Test Procedures, Test Cases for user acceptance, functional and integration testing.
- Discussed defects with analysts and then made decisions about modifications and changes.
- Gave access to end-users for Acceptance Testing and sent defect reports to developers.
- Used Rational Clear Quest to track defects, while prioritizing them for enhancements after base lining.
- Documented Manual Testing and also kept track of defects found during this testing.
- Applied Erwin, Rational Rose and Power designer for modeling tools and performed SQL queries.
- Participated in weekly review meetings to report the documented test metrics and defects.
- Used Rational Rose and MS Visio to carry out business modeling of the business process.
- Performed JAD sessions and interacted with stakeholders to discuss problem issues.
- Verified business scenarios on new builds to allow extended testing by the QA team and also helped the testing team to expedite User Acceptance and Regression testing to meet the production date.

ENVIRONMENT: Hybrid, SQL, Windows 2000, Rational Suite, Visio, MS Project 2003, MS Office Suite

Client: Flipkart Pvt Ltd, Mumbai, India.

**Jun. 2012 – Jan.
2014**

Project: Supply Chain Management Application

JR. BUSINESS ANALYST

Flipkart Pvt Ltd. is an Indian electronic commerce company based in Bengaluru, India. The scope of this project was to enhance the account personalization management intended for the mobile platforms. The enhancement intended to achieve multi-user scalability, 'Wishlisting' an item for future purposes, on-the go purchasing and easy notifications from the many features that had been intended to be developed.

Roles & Responsibilities:

- Worked with shipping department, prepare routine reports (ex. Shipping error, shipping cost, inventory, COT, and file shipping/receiving records).
- Gathered requirements, functional specifications, designed, tested, and enhanced business systems.
- Developed and implemented comprehensive test plans to ensure that systems and programs are tested.
- Worked together with User experience teams to create GUI elements, Workflow Diagrams, Activity Diagrams and cross functional diagrams.
- Designed wireframes and mockups and Designed the Chain management process.
- Kept track of **incoming inventory** for stocking, meet with master scheduler for shipment forecast.
- Created a **value stream mapping** to help cut time down time in shipping department and create procedures.
- Determined proper installation parameters for software and hardware, for smooth integration, transition and efficiency.
- Analyzed defects, identified and corrected technical problems and deficiencies.
- Validating the Web Service responses using SOAPUI.
- Design robust and scalable test plans for feature components which can be easily incorporated into the overall feature test plans and meet customer requirements with little or no guidance.

Environment: Oracle RDBMS, HPALM, HPQC, SharePoint, Android SDK, Selenium, SOAPUI, Spring, Springjs, ReactJs, Eclipse IDE.

Certifications:

Scrum Master Accredited Certification

Professional Scrum Master

SAFE Product Owner POPM Certification Id:27142611-1023

AWS Certification with Big Data specialty - License AWS-BGDE-1453
